SETTING-NEUTRAL ROLEPLAYING RULES

The 2d12 System

Version 2

CORE RULEBOOK

One roll, many outputs. Roll 2d12 + Skill + Modifiers vs. Difficulty.

SKROXIOUSDM

The 2d12 System

Version 2 · Core Rulebook

Design, writing and development: SkroxiousDM
Version 2 · Core compilation dated 2026-11-07

The 2d12 System is a setting-neutral tabletop roleplaying engine. Settings are published as separate books.

Acknowledgements & Inspirations

Testament of Dust owes a heartfelt thank-you to the creators of Blades in the Dark, :Otherworld, Cypher System, Fate, Torchbearer, Gumshoe, 2d20, Reign, and Imperium Maledictum.

In different ways, these games helped shape the questions behind this one: What makes a risk worth taking? What should success cost? How do a character's beliefs and obligations become part of play? And what keeps people moving when the world is larger, stranger, and less forgiving than they are?

Thank you for the examples, the challenges, and the moments that made me stop and reconsider a rule—or an entire approach. Sometimes the inspiration was a particular idea. Sometimes it was the feeling a game could create at the table. Sometimes it was simply the encouragement to believe that another way of doing things was possible.

2D12 system is my own answer to some of those questions, but I did not arrive at them alone. This acknowledgement is a small expression of gratitude for the work that helped me get here.

Playtest draft — not yet playtested. Set in EB Garamond and Source Sans 3.

CHAPTER I

Introduction

The 2d12 System is a setting-neutral engine for tabletop roleplaying. This chapter explains what this book contains, how its rules are named and how settings build on it.

Roll 2d12 + Skill + Modifiers vs. Difficulty.

IN THIS CHAPTER

About This Book 2
Notation 2
Terminology 2

About This Book

This core rulebook holds the complete, setting-neutral rules of the 2d12 System: the engine, six optional modules, and generic Descriptors, Playbooks and Focuses that work in any genre.

Ch.	Chapter	Contents
I	Introduction	Terminology, renamed stats, notation, settings
II	Core Rules	The 2d12 roll, character creation, Tychē Points, Effects, Resistance and recovery, clocks, Truths, Momentum and Woe, the conflict system, playbooks, advancement
III	Optional Modules	Module A Cyphers & Artifacts · Module B The Grind & Travel · Module C Truth-Driven Sandbox · Module D Downtime · Module E Factions · Module F Inquiry & Revelation
IV	Adversaries	GM rules for adversaries and opposition
V	Generic Descriptors	Descriptor rules and 24 setting-neutral Descriptors, six per pool
VI	Generic Playbooks	Playbook and equipment rules; Bellator, Furcifer, Savant, Interlocutor, Explorator, Adept
VII	Generic Focuses	Focus rules and 24 setting-neutral Focuses
App.	Quick Reference	The roll, Difficulty, outcomes, bonus dice, recovery and the four currencies at a glance

When a rule here mentions another chapter, it uses that chapter's name and section number. For example, Core Rules §4.1 means Chapter II, section 4.1. A bare reference such as §6 points to a section in the same chapter. Setting books use the same chapter names when they refer back to this book.

Notation

- ★ Major. An ability that costs 1 Refresh when you take it, at creation or through advancement. Taken as a creation extra, it costs 2 Refresh total, including the extra ability's 1-Refresh price (Generic Playbooks §1.1–1.2).
- ◆ Capstone. Unlocked after 12 Advances if you have at least 4 abilities from that playbook. It costs no Refresh, and each character can have one.
- ◈ Weird. A Focus that assumes the supernatural, strange technology or other weird elements. Each setting decides which ◈ Focuses it allows and how its world reacts to them.
- Tags are written in *italics*, such as *scarred knuckles*. Statuses add a tier, such as *wounded-2*.
- Difficulty is written by name and target, such as Standard 15 or Hard 18.

SETTINGS

The 2d12 System has no setting of its own. A setting book adds Campaign Truths, a skill list, its own Descriptors, Playbooks and Focuses, and special rules for its creatures and dangers. Where a setting rule and a general rule conflict, the setting rule wins.

Terminology

House name	What it is
Woe	The GM's pool: complications and escalation
Momentum	The party's shared pool of surplus Power
Tychē / Tychē Points	Each PC's narrative currency: invoke tags, accept compels; set by Refresh
Sōma	Pool: strength, endurance, toughness, vitality. Resists wounds, poison, exhaustion, cold
Mētis	Pool: alacrity, speed, precision, stealth, reflexes. Resists traps, falls, being caught
Psychē	Pool: mind, intellect, perception, memory, cunning. Resists confusion, illusion, deception
Pneuma	Pool: spirit, will, presence, faith, the supernatural. Resists fear, despair, possession, corruption

House name	Generic core playbook
Bellator	Front-line muscle; anchor Fight or Brawl
Furcifer	Infiltrator, scout, thief; anchor Stealth
Savant	Scholar, detective, scientist; anchor Lore or Investigate
Interlocutor	Diplomat, con artist, leader; anchor Persuade
Explorator	Ranger, pilot, explorer; anchor Survival
Adept	Mage, psychic, hacker; anchor Arcana or Tech

- Pool shorthand. Playbook stat blocks list base pools as Sōm / Mēt / Psy / Pne (Sōma / Mētis / Psychē / Pneuma).
- Scars take the name of the pool most tied to the condition that caused them: a Pneuma Scar, a Psychē Scar (Core Rules §6.3).

CHAPTER II

Core Rules

One roll, many outputs. A pair of twelve-sided dice decides whether you succeed, how much Power you earn and whether fate twists. Around that roll: pools that double as stress, tags and Truths, Momentum and Woe, and scripted conflicts.

Roll 2d12 + Skill + Modifiers vs. Difficulty.

IN THIS CHAPTER

1. Design Pillars 4
2. Core Resolution 4
3. Character Creation 5
4. Tychē Points 9
5. Effects 10
6. Resistance, Harm and Recovery 11
7. Progress Clocks 16
8. Truths 16
9. Momentum and Woe 16
10. Conflict System 17
11. Playbooks 23
12. Advancement 23
13. Example of Play 24
14. Design Notes — What Was Kept, Changed, Cut 25

1. Design Pillars

1. Every currency has one job. Four resources, each answering a different question:

Resource	Owner	Job	Borrowed from
Pools (Sōma / Mētis / Psychē / Pneuma)	Each PC	Physical, mental and spiritual cost — Effort and Resistance	Cypher + Blades stress
Tychē Points	Each PC	Narrative authority — invoke tags, accept compels	Fate
Momentum	The party (shared)	Tactical surplus from strong rolls	2d20
Woe	The GM	Mirror of Momentum — complications and escalation	2d20

2. One roll, many outputs. A single 2d12 roll tells you whether you succeed, how well (Power), and whether something twists (doubles).
3. Fiction is mechanical. Tags (on characters and items) and Truths (on scenes and the world) are the only modifiers. No hidden situational math.
4. Characters are driven, not just capable. Beliefs, Goals, and Instincts are the primary engine for earning Tychē Points and XP.

2. Core Resolution

2.1 The Roll

Roll 2d12 + Skill + Modifiers vs. Difficulty.

- Skill: +0 to +4 (from the skill pyramid; untrained = +0).
- Tags: +1 per relevant power tag, maximum +2 per roll. −1 per relevant weakness tag (no cap).
- Statuses: ± the tier of the highest relevant harmful status and the highest relevant helpful status.
- Truths: shift Difficulty by steps (§8), not the roll: one step per rank, ±3 steps at most.

Why 2d12 summed: it produces a bell curve (2–24, average 13) — predictable for skilled characters, swingy at the extremes, and big enough that +1 modifiers matter without dominating.

2.2 Difficulty Ladder

Difficulty	Target	Example
Trivial	—	No roll; it happens
Routine	9	Climb a rough wall with plenty of handholds
Easy	12	Climb a knotted rope
Standard	15	Pick a decent lock
Hard	18	Track someone over bare rock
Formidable	21	Talk down a warlord in front of his troops
Heroic	24	Hold a collapsing gate long enough for a village to escape
Epic	27	Things legends are made of
Divine	30	Miraculous

Each step of Difficulty is 3 points. Apply increases and reductions without a minimum target. A reduced target below Routine 9 remains a numerical target; it does not automatically become Trivial. Trivial means the action requires no roll. Roll only when uncertainty or the consequences make resolving the action worthwhile.

2.3 Odds Reference

Chance to hit the number needed on the dice (after subtracting your bonuses):

Need on dice	2d12	3d12 keep 2	4d12 keep 2
7+	90%	98%	99%
9+	81%	94%	98%
11+	69%	88%	95%
13+	54%	78%	89%
15+	38%	65%	80%
17+	25%	48%	66%
19+	15%	32%	48%
21+	7%	17%	28%

Example: Skill +3 and one tag (+1) vs. Standard 15 → need 11+ → 69%, or 88% with one bonus die.

2.4 Bonus Dice and Effort

You can add d12s to the roll and keep the best two. Maximum +2 bonus dice (4d12 keep 2) from any combination of:

Source	Cost
Effort (Cypher)	3 points from the relevant pool, minus that pool's Edge (min 0)
Momentum (2d20)	1 for the first die, 2 for the second
Woe (2d20)	Give the GM 1 Woe per die
Help	An ally spends 1 point from a pool and risks sharing the consequences

Effort (revised). Each use of Effort costs 3 − Edge from the relevant pool. You may use Effort a number of times per roll equal to your Effort Level (1 at start; 2 and 3 are unlocked by advancement). Each use buys one of:

- +1 bonus die — declared before rolling.
- +1 Power — declared after a Success or Success at a Cost (Cypher's "effort on damage"). It cannot turn a failure into a success.

Example: Effort Level 2 lets you buy one bonus die before the roll, then spend again for +1 Power if you succeed.

2.5 Outcomes

Result	Outcome
Beat the target by 3+ per step	Success with extra Power
Meet the target	Success — 1 Power
Miss by 1–3	Success at a Cost — 1 Power, but the GM adds a consequence or gains 1 Woe (player's choice of which)
Miss by 4+	Failure — the GM makes a move; GM gains 1 Woe

Power = 1 for meeting the target, +1 for every full 3 points over it. Power is spent on Effects (§5). Any Power you don't spend becomes Momentum (party pool, max 6).

2.6 Doubles (Twists)

If your two kept dice show the same number:

- On a success: Critical — +1 Power and add a narrative flourish.
- On a failure or cost: Complication — the GM introduces a complication right away.
- Double 12s: always a success with +2 Power. Double 1s: always a complication, even on a success.
- Buying it off. When the dice give you a complication (a twist, or a Risky roll, §2.7), you may cancel it by giving the GM 2 Woe: a problem now, or a problem later. If you keep it and the GM can't think of a fitting complication, the GM gains the 2 Woe instead.
- NPCs. When the dice give an NPC a complication, the GM may spend 2 Woe to cancel it. Otherwise the GM describes the complication, or invites the players to.

Base chance of doubles on 2d12 is about 8% (1 in 12).

2.7 Risky Rolls (Optional)

Some rolls aren't harder, just more dangerous. Before a roll, the GM may call it Risky 1, 2 or 3.

- Risk die. Roll one extra d12 of a different colour with the others. It's never kept, doesn't add to the total and doesn't count toward the bonus dice maximum.
- Complication. If the Risk die shows the rating or lower, a complication occurs after the roll is resolved, whatever the result and on top of any twist. You can buy it off for 2 Woe (§2.6).
- Raising the stakes. The GM may spend 1 Woe to make a roll Risky 1, or to raise its rating by 1 (maximum 3). Settings may make some hazards Risky by default.

Rating	Risk die shows	Chance of a complication
Risky 1	1	about 8%
Risky 2	1–2	about 17%
Risky 3	1–3	25%

3. Character Creation

Character Creation at a Glance

Before creating characters, agree on the campaign premise: the situation that brings you together, the immediate problem, the kinds of characters that fit, and why you will cooperate. For example: isolated settlements must reopen a trade route before winter while rival leaders compete to control it.

These steps describe the order of creation; the subsections below group rules by subject for reference. Revisit earlier choices as your character takes shape.

1. Establish the campaign premise together.
2. Sketch your character concept: a role, an important experience, and something you want to explore.
3. Write your World Belief (§3.5).
4. Write your Self Belief (§3.5).
5. Choose Descriptor, Playbook, and Focus (§3.1); complete pools, Edge, skills, tags, abilities, and starting resources (§§3.2–3.4, §3.6, §4.1).
6. Introduce the characters and agree on connections, including the link supplied by your Focus.
7. Write your Other Belief with the other player's agreement (§3.5).
8. Choose a concrete starting Goal (§3.5).
9. Write your Instinct (§3.5).
10. Review the character with the group.

3.1 The Sentence

> *"I am a [Descriptor] [Playbook] who [Focus]."*
>
> *"I am a Reckless Furcifer who Never Leaves Anyone Behind."*

Part	Grammar	What it gives you
Descriptor	Adjective	+2 pool points to one pool, 1 power tag, 1 weakness tag, 1 suggested Instinct
Playbook	Noun	Starting pools and Edge, special abilities, XP trigger, load-out, an anchor skill
Focus	Verb phrase	A tag theme (2 power tags + 1 weakness), a Tier 1 Focus ability, and a link to another PC

3.2 Pools and Edge

Four pools, each roughly 6–14:

- Starting values: the playbook sets the base (totals 36), plus 4 points to distribute and +2 from the Descriptor (42 total).
- Edge: the playbook gives 3 points of Edge, maximum 2 in any one pool at creation. Edge reduces the cost of Effort from that pool and adds dice when you Resist with it (§6).
- Pools are spent on Effort (§2.4) and Resistance (§6). They are your stress tracks.

Pool	Covers	Resists
Sōma	Strength, endurance, toughness	Wounds, poison, exhaustion, cold
Mētis	Speed, precision, stealth, reflexes	Traps, falls, being caught or grabbed
Psychē	Intellect, perception, memory, cunning	Confusion, illusion, deception, madness from knowledge
Pneuma	Will, presence, faith, emotional core, the supernatural	Fear, despair, possession, corruption, social pressure

3.3 Skill Pyramid

Ten rated skills from a list of 20:

Rating	Count
+4 Great	1
+3 Good	2
+2 Fair	3
+1 Average	4

The playbook's anchor skill must sit at +3 or +4. The pyramid rule (each tier must have at least as many skills as the tier above it) still applies when you advance.

Generic skill list by default pool:

Sōma	Mētis	Psychē	Pneuma
Athletics	Shoot	Notice	Will
Brawl	Stealth	Investigate	Persuade
Fight	Drive/Pilot	Lore	Intimidate
Endure	Craft	Tech	Empathy
Survival		Medicine	Arcana*
		Deceive	

*Arcana is renamed per setting: Mysticism, Faith, Psionics, Weirdness, or removed entirely in mundane games.

The default pool pays for Effort and Resistance. The GM can allow another pool when the fiction supports it (Intimidate with Sōma = looming; with Pneuma = cold menace).

3.4 Tags

Characters carry 6–8 character tags from Descriptor, Focus, and Playbook:

- Power tags (e.g. *ex-navy marksman*, *silver tongue*, *grandfather's revolver*): +1 each when relevant, max +2 per roll.
- Weakness tags (e.g. *owes the wrong people*, *bad knee*): −1 when relevant, or compel for a Tychē Point (§4).
- Any tag can be compelled. A power tag can also cause trouble when its meaning creates a concrete complication. It keeps its normal benefits (§4).
- Burning a tag: mark a power tag as burned to gain an automatic +1 Power on a success. It stays unusable until you recover it (a downtime action or a milestone). Burning ignores the +2 cap.

With a +2 cap, a third relevant tag is best used for burning or as Tychē Point invoke material.

3.5 Beliefs, Goals, and Instincts

Three Different Jobs

- Beliefs state convictions and commitments: why you act. Write one World, one Other, and one Self Belief.
- Goal states a concrete objective for this session or mission: what you want to accomplish next.
- Instinct states an if/then reflex: how you habitually respond. Acting on an Instinct lets you take that action without spending time.

Goals are rewritten each session; Beliefs and Instincts can change at milestones (§12.3). Beliefs can justify compels (§4) and meaningful decisions can earn XP (§12.1). They do not create an additional resource.

Writing Your Beliefs

Each Belief combines a conviction with a commitment to act: "I believe this; therefore, I will do this." Write what you intend to do, not an outcome you are guaranteed to achieve. Avoid a virtue without an action: "I value loyalty" gives less direction than "Those who stand beside me deserve my loyalty; I will not abandon a companion to save myself."

World Belief

Connect yourself to an important problem, faction, institution, or conflict in the campaign premise. Explain why you cannot simply walk away.

- What must change, or be protected?
- Why does it matter to you personally?
- What will you do about it?

> *I believe [something about the campaign situation]. Because [why it matters to me], I will [an action or ongoing commitment].*

Example: "The settlements will starve if their leaders keep the roads divided. Because I have seen what isolation costs, I will bring them into a common defence agreement."

Agree with the group that this commitment engages with the campaign you intend to play. Characters need not share an ideology, but should have reasons to participate together.

Self Belief

State a principle about who you are, who you intend to become, or what you consider right. Show how it affects your choices.

- What principle is more than a convenience?
- What kind of person are you determined to become, or never become?
- What will you do when this conviction becomes difficult to uphold?

> *I believe [a personal principle]. I will live by this conviction by [a commitment], even when [a meaningful pressure or cost].*

Example: "People are not expendable tools. I will not knowingly sacrifice those in my care merely to secure an advantage."

Your Self Belief need not contradict the others, but their demands may sometimes pull in different directions. Do not resolve those possible dilemmas during creation.

Other Belief

Once the characters have concepts and roles, introduce their World and Self Beliefs. Agree on connections and shared history, then choose another PC whose outlook or choices interest you. Your Focus's existing link may supply this connection; writing a Belief does not grant an additional Focus benefit.

- Whom do you trust, admire, distrust, or feel you owe?
- What do you hope to preserve or change in the relationship?
- How will you act because of that conviction?

> *I believe [another PC] is / deserves / needs [my conviction about them]. Because [our connection or why it matters], I will [how I intend to act toward them].*

Example: "Mara kept our caravan alive when I lost my nerve. I will support her leadership, but I will speak against her when she treats lives as acceptable losses."

Agree on the relationship premise with the other player. Your Belief expresses your perspective, not authority over their character's motives or decisions. An agreed misunderstanding is possible; it does not establish your interpretation as fact.

Connecting Beliefs to Your Character

Use Beliefs as prompts, not prerequisites, when completing your mechanical choices:

- Descriptor: how does your temperament shape your approach?
- Playbook: what role and methods do you bring?
- Focus: what distinctive pursuit supports or complicates your commitments?
- Skills and abilities: what can you already do, and where does ambition exceed competence?
- Tags: which strengths help you act, and which vulnerabilities make that difficult?
- Load-out: which gear options and load may support your commitments? Follow §3.6; do not choose every item in advance.

Beliefs grant no additional skills, tags, abilities, equipment, pool points, or starting Tychē. A conviction is not automatically a power tag or a modifier. Wanting to protect others does not require being good at it.

Choose Your Starting Goal

Choose a concrete opening objective that advances at least one Belief. It should have a recognisable completion point.

> *My current Goal is to [achieve a specific result]. I will know it is accomplished when [observable outcome].*

Example: "Secure the mill town's agreement to send a delegate to the road council."

Completing this Goal does not complete the World Belief about uniting the settlements. A Belief can motivate several successive Goals. Your Goal can instead arise from an Other or Self Belief; it need not serve all three.

Write Your Instinct

Write a recognisable trigger and habitual response. Your Descriptor's suggested Instinct can be a starting point.

> *When [trigger], I [habitual response].*

Example: "When we enter an unfamiliar place, I identify an escape route before settling in."

Acting on an Instinct lets you take that action without spending time. It does not guarantee success or remove a roll when the normal resolution rules require one.

Review Before Play

Read your three Beliefs, Goal, and Instinct aloud. Check that:

- Each Belief contains a conviction and intended action.
- The World Belief connects to the agreed premise.
- The Other Belief concerns a PC and has their player's agreement.
- The Self Belief can influence a difficult choice.
- The Goal gives you something concrete to pursue immediately.
- The Instinct has a recognisable trigger.
- You have reasons to cooperate even when convictions differ.

USING BELIEFS TO PREPARE PLAY

For each character, note an opportunity and a possible dilemma suggested by their Beliefs. These are invitations, not predetermined outcomes. Challenge commitments without prescribing the correct response. Use Other Beliefs to invite interaction, not override another player's agency. A character's conviction does not automatically establish facts about the world. Do not demand a roll merely to prove that the character sincerely holds it.

Example: A Character Ready for Play

Premise: isolated settlements must reopen their trade route before winter.

Concept: a former caravan guard seeking to prevent another disastrous winter expedition. The player completes the normal mechanical choices for protection, travel, or negotiation; these Beliefs do not dictate a single build.

- World: "The settlements will starve if their leaders keep the roads divided. Because I have seen what isolation costs, I will bring them into a common defence agreement."
- Other: "Mara kept our caravan alive when I lost my nerve. I will support her leadership, but I will speak against her when she treats lives as acceptable losses."
- Self: "People are not expendable tools. I will not knowingly sacrifice those in my care merely to secure an advantage."
- Goal: "Secure the mill town's agreement to send a delegate to the road council."
- Instinct: "When we enter an unfamiliar place, I identify an escape route before settling in."

The GM might offer a delegation in exchange for escorting a vulnerable supply caravan through a dangerous pass. The Goal provides direction, capabilities determine options, and the Beliefs make decisions matter. The GM does not predetermine the character's answer.

Compact Templates

- World: I believe [conviction about the campaign situation]; therefore, I will [commitment].
- Other: I believe [conviction about another PC]; therefore, I will [how I act toward them].
- Self: I believe [personal principle]; I will live by it by [commitment], even when [pressure or cost].

3.6 Starting Resources

- Tychē Points: start each session with Tychē Points equal to your Refresh (base 3; see §4.1).
- Load-out: chosen during play from the playbook's gear list (Blades-style light/normal/heavy load), not bought in advance.

4. Tychē Points

Spend 1 Tychē Point to:

- Invoke — reroll all dice, or add +2 after rolling. This works with any tag or Truth you can justify, even one belonging to the scene or an enemy. Invokes are not limited by the tag cap.
- Declare — establish a minor fact about the scene. The GM may require it to tie to one of your tags.
- Resist harder — reduce one Resistance cost to 0 (§6).

Earn Tychē Points by:

- Compels — the GM or another player offers a meaningful complication based on any character tag (power, weakness, or Scar), any of your World, Other, or Self Beliefs (§3.5), or your Instinct. Accept → +1 Tychē Point. Refuse → pay 1 Tychē Point.
- Compel yourself — propose a compel on one of your own tags, one of your Beliefs, or your Instinct. If the GM agrees it meets the rules below, take the complication and gain +1 Tychē Point. Facing it can also earn XP (§12.1).

Compels

- Meaningful. The complication must change the situation: an obstacle, obligation, exposure, hard choice, or lost opportunity. Flavour or a minor inconvenience doesn't count.
- Clear offer. Before you accept, know which tag, Belief, or Instinct justifies it, what will happen, and what it commits your character to. You otherwise control how your character responds.
- Limits. A compel must follow from the established meaning of the relevant tag, Belief, or Instinct. It adds no numerical penalty, can't cancel a success already resolved, and an existing penalty doesn't earn Tychē just because a tag, Belief, or Instinct explains it.
- *Feared duellist:* a rival challenges you before an audience whose support you need. *Devoted healer:* you stay to treat a dying enemy and lose the chance to pursue their commander.

Beliefs and Compels

All three Belief categories use the same compel procedure. Merely mentioning a Belief or acting in accordance with it does not earn Tychē; the complication must meet the standard above. Several Beliefs supporting one complication still produce only one compel payment. Beliefs do not grant free modifiers and are not additional power tags.

Belief example: your Self Belief rejects sacrificing people for advantage. You propose staying to escort stranded civilians instead of pursuing the fleeing saboteur. Before acceptance, agree that the delay will let the saboteur escape the immediate pursuit. Accepting that meaningful complication earns 1 Tychē Point; it does not dictate every action you take afterward.

Declining a compel uses the normal refusal rule above; simply acting against a Belief is not itself a compel refusal or an automatic penalty (§12.3). An Other Belief never grants control over another PC.

4.1 Refresh

- Base Refresh is 3. At the start of each session, your Tychē Points reset to your Refresh (if you have more, keep them, up to the cap).
- Tychē cap. You can hold at most Refresh + 3 Tychē Points. Any you would gain above the cap are lost.
- At creation you get 1 playbook ability and your Tier 1 Focus ability for free.
- You may take up to 2 additional playbook abilities at creation, at 1 Refresh each.
- Abilities marked ★ (Major) cost 1 Refresh whenever you take them, including through advancement.
- An attuned artifact (Module A) costs 1 Refresh while you keep it.
- Minimum Refresh is 1. You can never trade away your last Tychē Point.
- The advancement option "+1 Refresh" (§12) lets you buy Refresh back.

Design intent: power comes at the cost of narrative flexibility. A low-Refresh character is mechanically strong but has to accept compels to stay fuelled.

5. Effects

Effect	Cost	What it does
Attack	1 Power per tier	Inflict a Status (e.g. *wounded-2*, *rattled-1*, *on fire-3*). In a conflict, an Attack removes Disposition equal to its Power + 1 instead (§10.6)
Weaken	1	Reduce one of the target's statuses by 1 tier, or Burn one of its tags for the scene
Create	2 Power per rank	Create a Truth that lasts for the scene (*smoke cover*, *crowd on our side*). It may end sooner if its removal condition is met. One extra Power makes it last until its removal condition is met. State its scope, rank (1 costs 2 Power; 2 costs 4 Power before discounts) and removal condition (§8)
Enhance	1 per tier	Give an ally a helpful status (*inspired-2*)
Restore	1 per tier	Reduce a harmful status on yourself or an ally. Lasting injuries have limits (§6.6)
Discover	1	Ask the GM one question; you get a true, useful answer
Advance	1 per segment	Tick a progress clock (§7)
Disrupt	3	Cancel or delay an enemy's prepared action, or take 1 point off the GM's Woe
Extra Feat	1	Achieve a second, related goal with the same action

Each point of Power buys an Effect. Players choose Effects that fit what their character did in the fiction.

Create costs and discounts. The baseline is 2 Power per Truth rank, equally inside and outside conflicts. Each explicit Create discount from an ability or item reduces the cost by 1 Power, to a minimum of 1. A relevant tag or Truth does not grant a Create discount merely by being relevant. Discounts must be stated in the ability or item entry. Larger-scale Truth changes still require their normal clocks or major arcs (Module C.6).

Any unspent Power → Momentum.

5.1 Statuses

- Statuses have tiers 1–6.
- Recording a status. When you create a status, record its name and tier, its scope (who or what it affects, and in which circumstances), and its removal condition (the event, recovery, treatment, or change that ends it). The scope must follow from the fiction. Normal recovery and removal rules still apply. *Mapped patrol routes-2* — evading the patrols you watched; ends when the routes change.
- Stacking: a new status of the same kind raises the existing tier by the new tier minus 1 (minimum +1), so small hits accumulate slowly.
- Tier 6: the target is Taken Out of whatever that status represents (dead, unconscious, captured, convinced, routed), within the status's scope. A harmful status reaching tier 6 also gives one Scar (§6.3). Death needs a lethal cause and established stakes.
- Statuses modify rolls by ± their tier (use only the highest relevant harmful status and the highest relevant helpful status).
- Same kind. Harm is the same kind when it worsens the same injury, affliction or condition. Renaming it doesn't stop it stacking: another cut worsens *wounded*, renewed menace worsens *terrified*, but a fresh burn needn't stack with a concussion. The GM says whether new harm stacks before you decide to Resist or accept an injury (§10.9).
- Order. Resistance and armour reduce incoming harm before it stacks. Harm reduced to tier 0 isn't recorded and doesn't stack. A status can't go above tier 6; extra tiers have no effect unless a rule says so.
- What it hinders. A status modifies only rolls within its recorded scope: *slashed thigh-3* hinders running and climbing, not reading a ledger. A status can also decide what is possible: no roll lets you use a hand you no longer have. If circumstances change, review its scope; don't broaden it just because its name allows another reading.
- Life-threatening harm. A physical status that reaches tier 6 can make you Dying when lethal stakes are in play (§6.7).

6. Resistance, Harm and Recovery

When a consequence lands on you (a status, lost gear, a bad position), you may Resist:

1. Choose the pool that fits (see §3.2: Sōma for harm, Mētis to dodge, Psychē against deception and confusion, Pneuma against fear and the supernatural).
2. Roll a number of d12s equal to 2 + that pool's Edge and read only the highest die. If penalties take the pool's Edge below 0, see Negative Edge below.
3. Pay the listed cost in pool points. Don't subtract Edge from it; Edge has already helped by adding dice. If two or more dice show 12, pay 0 and clear one tier-1 status:

Roll	Cost	2d	3d	4d	5d
Two 12s	0 + clear a tier-1	1%	2%	4%	6%
9–12	1	55%	68%	77%	81%
5–8	2	33%	26%	19%	13%
1–4	3	11%	4%	1%	<1%

4. Effect: reduce the incoming status by 2 tiers (to 0 if that brings it below 1), or turn a severe consequence into a lesser one.

The chance columns show Edge 0 to 3 (2d to 5d). A single 12 is simply a highest die in the 9–12 band. When an ability says your Edge counts as 1 higher for a Resist, or gives Edge +1 to it, roll one more die; a penalty to Edge (such as *Exposed* or *Shaken*) rolls one fewer.

Negative Edge. Penalties can take Edge below 0 for a Resist:

- Edge −1: roll 1d12.
- Edge −2 or lower: roll a number of d12s equal to the Edge without its minus sign (2d12 at −2, 3d12 at −3, and so on), and read only the lowest die.

Pay the listed cost for the die you read. A single die can't give the double-12 result. When you keep the lowest, the double-12 result needs every die to show 12. The chance columns show Edge −1 (1d), −2 (2d, lowest) and −3 (3d, lowest).

Roll	Cost	−1	−2	−3
All 12s	0 + clear a tier-1	—	1%	<1%
9–12	1	33%	10%	4%
5–8	2	33%	33%	26%
1–4	3	33%	56%	70%

Imposed harm, in order. When an effect imposes a harmful status:

1. The GM names the status, its source and its incoming tier, and says whether it stacks with a status you already have (§5.1).
2. If you Resist, add any armour that applies (Playbook Rules §2.3) and pay the cost. A cost you can't fully pay makes you run dry (§6.1).
3. Record what is left with normal stacking. A status reduced to tier 0 isn't recorded.

Once per application. Resist each application of harm once. You can't make a second attempt against the same harm.

What Resistance can't touch. Resistance changes an imposed consequence. It doesn't reverse the action's success, restore lost Disposition or revoke an agreed outcome. Unless an ability says otherwise, you can't Resist:

- ordinary Disposition loss in a conflict (§10.6);
- an injury you accepted to cancel Disposition loss (§10.9);
- a cost you accepted in a concession (§10.11), or any other cost you accepted as payment for a benefit;
- a running-dry status (§6.2).

Protected payments. An effect that prevents incoming harm, cancels a consequence or clears a status as a side benefit (such as the double-12 result above) can't remove an injury you accepted as payment, whichever action or Resistance produced it. Treatment, healing time and effects that explicitly heal an existing injury affect it normally (§6.6).

6.1 Running Dry

Trigger. You run dry when a positive cost brings a pool to 0 or is more than the points left in it. Finish the action or Resistance that caused the cost, then take a harmful running-dry status for that pool (§6.2). Running dry does not, on its own, take you out, give you a Scar or refill the pool.

Overrun. Work out the final cost after Edge (for Effort), Tychē and every other permitted reduction, then compare it with the points left in the pool:

- Overrun = final cost − points left (minimum 0).
- Incoming status tier = 1 + overrun (recorded at tier 6 at most).

Spend the points you have. A pool can't go below 0, and the unpaid excess does not move to another pool.

Points left	Final cost	Overrun	Incoming status
3	2	0	None (1 point left)
3	3	0	Tier 1
1	2	1	Tier 2
1	3	2	Tier 3
0	3	3	Tier 4
0	5	5	Tier 6

Overrun beyond tier 6 has no extra effect unless a rule or an established stake says so.

Which costs can overrun. Only Resistance and costs imposed on you. Effort, Help and ability activation costs must be paid in full unless the ability says it can overrun. You may spend your exact last points on purpose: the pool runs dry and you take a

tier-1 status. A cost you accept as payment for a benefit is not an imposed cost.

Pay as you go. Pay each cost at the point its rule says, and resolve any running dry straight away. If that status takes you out, finish only the action or Resistance whose cost caused it: you can't add more Effort, buy more Power or activate more abilities for that action. The action still resolves. If it is one of two independent actions in a volley, both resolve before victory is checked.

Separate costs stay separate. Each cost listed separately is its own payment. You can't split one cost into smaller payments, or combine separate costs, to change overrun or stacking. When one effect takes several points from the same pool at once, total them as one imposed cost unless the effect says otherwise. Costs from different pools are resolved separately.

Resisting on empty. You can Resist with a low or empty pool unless your condition prevents it (§6.4), and the Resistance still takes effect. Resolve protection, the Resistance and the original consequence first, then apply the running-dry status. The new status doesn't penalise that Resistance roll or undo its result.

Zero costs. A final cost of 0 never makes you run dry, even if the pool is already empty. Being at 0 isn't an event in itself: you don't take a new status because time passes, a new turn begins, or you take an action that costs nothing. A later positive Resistance cost or imposed cost can make you run dry again.

Empty pools. An empty pool has no penalty of its own. It doesn't remove Disposition or take you out; its running-dry status does that work. You can keep acting with other resources or with actions that cost nothing. The pool stays at 0 until rest restores it (§6.5). There is no automatic refill.

NPCs. Ordinary NPCs don't have pools and never run dry. Spending Woe on an NPC creates no status, and Woe can't be overrun: if the GM can't pay an ability's Woe cost, the NPC can't use that ability. An NPC built with full PC pools runs dry normally.

RUNNING DRY IN ORDER

1. Pay each cost when its rule says.
2. If the cost empties or overruns the pool, work out the overrun.
3. Impose that pool's running-dry status at tier 1 + overrun.
4. Stack it with the same status if you already have it (§5.1).
5. At tier 6, apply the status's scope, then record one Scar (§6.3).
6. Recover the pool and the status separately (§6.5).

6.2 Running-Dry Statuses

The status must fit both the pool and the action that drained it:

Pool	Example running-dry statuses
Sōma	*physically exhausted*, *muscular strain*
Mētis	*unsteady*, *reflexes overloaded*
Psychē	*mentally exhausted*, *cognitive overload*
Pneuma	*resolve fractured*, *spiritually drained*

Set it up once. When you first record the status, set its name, its scope and its recovery category (§6.5). The name decides which rolls it hinders.

One status per pool. The first time a pool runs dry, that status becomes the pool's depletion status for the rest of the continuous ordeal. Write the pool beside it. Running dry in that pool again worsens the same status, unless a genuinely different cause calls for a different consequence. A new name or description is not a different cause. Each running-dry event worsens only one status.

Example. You have *mentally exhausted-2* and overrun Psychē by 2. The incoming status is tier 3, which stacks for +2, so you now have *mentally exhausted-4*.

It is a cost. Armour, Resistance and effects that cancel incoming consequences can't prevent or reduce a running-dry status. Once recorded, it can be treated, Restored or healed like any existing status, within the limits of the effect used. A clearing benefit from the same Resistance or action can't clear the status that paid for it.

6.3 Tier 6 and Scars

When a harmful status reaches tier 6, whether in one hit or through stacking:

1. Resolve its tier-6 outcome (§5.1).
2. Apply removal within the status's scope (below).
3. Record one Scar, subject to the limits below.

Scope. If the status leaves you unable to pursue your side's intent in the current conflict, you are Taken Out. Your side's shared Disposition doesn't change (§10.7). If none of a side's participants can continue pursuing its objective, that side loses at once. If the status only stops one activity (*bound* stops you moving, not talking), apply that restriction and stay in the conflict. Set the scope of a non-damage status when it is inflicted, and don't widen it at tier 6. Either way, the status still gives its Scar.

Not lethal by default. A running-dry status at tier 6 is not deadly on its own. Death needs a lethal cause and established stakes. Tier 6 doesn't, by itself, cost you a limb, lower a maximum pool or impose any other permanent loss; those need an established consequence, a specific effect or an agreement.

The Scar. The status records your current condition; the Scar records the lasting mark of reaching the breaking point. The player and GM agree on a Scar that fits what happened. A Scar can't introduce an unrelated injury, dictate an unrelated belief, or extend the opposition's victory beyond the stakes. Label it with the pool most tied to the condition (a *Pneuma Scar*):

Tier-6 status	Possible Scar
physically exhausted	*my old injury gives out under strain*
reflexes overloaded	*hesitates when everything moves at once*
cognitive overload	*gaps in the memory of that night*
terrified	*can't forget what was behind the door*
resolve fractured	*doubts the oath that once sustained me*
bound or *captured*	*can't bear being restrained*

Scar limits.

- One per episode. A status gives a Scar the first time it reaches tier 6. More harm while it stays at tier 6, or lowering it and raising it again in the same episode, gives no further Scar.
- One per event. A single action or hazard can give a character at most one Scar, even if it takes several statuses to tier 6. Only an ability that says so can give more than one.
- Scar Recorded. Mark every status that reached tier 6 in a Scar-giving event as *Scar Recorded* for the rest of the continuous ordeal, even if the status is later cleared. Remove the mark only when the status is fully cleared and the scene or ordeal is over. The mark is bookkeeping only, not a status or a penalty.
- Don't split one condition into several differently named statuses to gain or avoid Scars.

Scar effects. A Scar is a lasting weakness tag, not a status. Apply it when it's relevant, and it can be compelled for Tychē Points. Rest, treatment, Restore and pool recovery don't remove a Scar; changing one takes an Advance, a milestone or an explicit ability. If a Scar and a harmful status describe the same impairment on the same roll, apply only the larger penalty. Your fourth Scar retires the character from ordinary adventuring. Finish the immediate scene, then decide with the player how the character leaves. Retirement doesn't mean death.

6.4 Being Taken Out

Three ways out. You are Taken Out of a conflict when a harmful status reaches tier 6 within its scope (§6.3), when an effect says so, when you voluntarily withdraw, or when an established circumstance prevents you from pursuing your side's objective (§10.7). Ordinary Disposition loss never takes an individual out. Once you are out, you can't start another action, spend Effort or activate an ability unless its rules let you act while Taken Out.

Disposition stays with the side. Being Taken Out doesn't directly change your side's shared Disposition. Your side loses your skills, abilities and help, and if none of its participants can continue pursuing its objective, it loses at once (§10.7, §10.10).

Out isn't down. Being Taken Out doesn't, on its own, make you unconscious, injured or dying. Describe it to fit the fiction: pinned down, disarmed, driven back, cut off, or too frightened to go on. Injury needs a status, death needs established lethal stakes (§6.7), and permanent harm needs an established consequence (§6.8).

Resisting while out. Being Taken Out doesn't automatically stop you Resisting, but the Resistance must be something you can still do. You can brace against pain while pinned down, but you can't dodge while fully *bound*, or use an act of will while unconscious. When a status first takes you out, finish any Resistance already under way. Resistance can't reverse a defeat, undo an accepted concession, or prevent a cost you accepted as payment. Once a conflict is settled, you can only Resist the consequences that were left open to it; you can't use Resistance to reopen the intent or delay settlement.

Getting back in. To rejoin a conflict that is still going, and that your side hasn't lost, you need both of these:

1. the condition that stopped you must be removed; and
2. an ability or rule must explicitly let a Taken Out character return.

Returning doesn't restore any of your side's Disposition unless the ability says so.

An ordinary Defend can't bring back a Taken Out ally unless its rules say it can. If you recover after the conflict is over, you act normally in the scenes that follow, subject to your remaining statuses.

6.5 Rest and Recovery

Recovery follows four successive rest stages:

Rest	Time required	Recovery
First	A few seconds; one action during an encounter	Roll 1d12, halve the result and round up
Second	10 minutes	Roll 1d12, halve the result and round up, then add 1
Third	1 hour	Roll 1d12, halve the result and round up, then add 2
Fourth	10 hours, usually overnight	Restore all four pools to full

- Divide the recovered points among Sōma, Mētis, Psychē and Pneuma however you wish, without exceeding a pool's maximum. They don't have to go to whichever pool was drained most recently.
- Edge does not apply to recovery. Edge only reduces Effort cost and adds Resistance dice (§2.4, §6); recovery stays flat so it can't stack with Edge's other benefits.
- After the 4th rest, the cycle resets — your next rest that day (or the start of a new day) is a First rest again.
- Each PC rests and rolls independently. If two of five party members stop for 10 minutes to recover, the other three don't have to stop or roll.
- Running dry has no automatic refill. A pool at 0 comes back through these rests in the normal way. Its running-dry status recovers separately, as described below.

Recovering running-dry statuses. Restoring a pool doesn't clear its running-dry status, and clearing the status doesn't refill the pool. When you first record the status, choose its category:

- Depletion (exhaustion, strain, temporary overload): the default, unless the source makes it an injury or affliction. It recovers through rest, as described below.

- Injury (real physical damage): recovers through treatment, Restore and healing time, like any wound.
- Affliction (supernatural or ongoing cause): recovers only as its source allows.

Resting off depletion *(playtest value)*. When you take one of the 1st–3rd rests, you can put the recovery roll toward the pool, toward its depletion status, or split it between them. Every 2 points removes 1 tier of the depletion status. Each point counts once. The 4th rest (full restore) also clears any depletion status whose cause has ended. It doesn't clear Scars, injuries or afflictions. Reassurance or first aid can make recovery possible, but can't keep stripping depletion tiers with Restore. Abilities that explicitly restore exhaustion or harmful statuses work as written.

No shortcut. Running dry never gives a special recovery roll, an automatic refill, or a way around the rest cycle. You can't overrun a pool on purpose to replace a bad recovery roll or to jump to a fresh rest stage.

Each layer recovers on its own. Disposition, pools and statuses each recover only through their own procedure:

- Disposition is set fresh when a genuinely new conflict begins (§10.2). Fresh Disposition doesn't refill pools or clear statuses, and a brief pause in the same struggle isn't a new conflict.
- Pools recover through the rests above. A full pool doesn't heal an injury, and an injury doesn't stop pool recovery unless its rule says so.
- Statuses recover by their kind: a temporary state ends when its cause or duration ends; injuries need treatment and time (§6.6); afflictions follow their source.

Winning a conflict, ending a scene or setting fresh Disposition is not a general reset.

Advance option — Hardened *(6 XP, one-time)*

Recover 1 additional point whenever you make a recovery roll. This Advance may be taken only once. It does not change the fourth rest's full recovery.

6.6 Treatment and Healing

Appropriate care. Treatment must address the cause of the harm:

Harm	Typical care
Wounds, blood loss, poison	Medicine and suitable supplies
Fear, grief, shock	Empathy, reassurance and safety
Confusion, cognitive disruption	Diagnosis, rest or specialist care
Damaged machines or implants	Science or Craft, tools and access
Curses, possession, corruption	A fitting supernatural method or the source's stated cure

A skill doesn't supply the tools, knowledge or fictional permission on its own.

Routine care. In safe conditions, when failure would add nothing, care needs no roll. It gives permission to treat, stabilises where nothing is uncertain, and meets the conditions for natural recovery. It generates no Power. If ordinary treatment could remove one tier of a lasting injury and success is routine, remove that tier and mark the injury *treated* there's no surplus Power or Momentum. Roll only when an uncertain result matters, never just to farm Momentum.

Emergency care stops an injury getting worse: stopping bleeding, splinting a limb, pulling someone away from a harmful influence, isolating a damaged power cell. It doesn't normally reduce the tier. When the outcome is uncertain, roll the treatment skill vs. Standard 15, adjusted by Truths. On a success, the deterioration stops or treatment can begin. On a Success at a Cost, the same, with the normal cost. On a failure, the condition is still untreated; the GM announces any further consequence before another attempt.

Restore on lasting injuries. Restore costs 1 Power per tier (§5). It can clear a temporary condition outright when the action removes its cause: putting out burning clothes reduces *on fire*, calming an ally reduces fear. Lasting injuries are slower:

- Ordinary treatment reduces a given lasting injury by at most 1 tier. Mark it *treated*.
- Further ordinary treatment can't reduce it again until a healing interval (below) actually removes a tier from it. Interrupting rest, changing healers, renaming the injury or starting a new scene doesn't clear the mark, and new harm to the same injury doesn't refresh it. A separate injury has its own mark.
- Spare Power buys other fitting Effects or becomes Momentum as normal.
- Abilities, cyphers and items that explicitly heal a stated number of tiers (such as *healing gel*) follow their own text. Abilities that only change the cost of Restore don't lift the 1-tier limit.

Care in a conflict. Treating someone under opposition uses your action. Emergency care can be a Defend only where the conflict type or an ability allows its skill (such as *Battlefield Surgeon*). Restoring Disposition keeps your side in the contest; it doesn't heal an injury unless the action also buys a healing effect.

Healing intervals *(playtest values)*. Once a lasting injury has had appropriate care and its cause has stopped, safe rest removes one tier per interval. Use the injury's current tier:

Current tier	Safe recovery to remove 1 tier
1	One full night
2	One full day
3	Three full days
4	One full week
5	Appropriate treatment, then one full week
6, not lethal	Remove the incapacitating cause and set a recovery method
6, life-threatening	Stabilise, then definitive care before natural recovery begins (§6.7)

These are game-time intervals, not medical estimates. A full night is the normal overnight rest; a full day is 24 hours in recovery conditions; a full week is seven such days. Intervals can overlap pool rests. Recovery needs shelter, food and care that suit the injury. Light activity is fine; strenuous activity that aggravates the injury stops recovery.

Timing.

- When an injury's tier changes, its next interval uses the new tier.
- If treatment or healing lowers the tier, keep the qualifying time already spent. If that time already meets the new interval, remove one tier and start the next interval at zero. One change can complete only one interval.
- If fresh harm raises the tier, discard progress and start a new interval at the higher tier. Separate injuries don't reset each other.
- A brief interruption pauses recovery; it doesn't erase it. A bad roll on an unrelated action doesn't worsen an injury; that needs a relevant danger or a stated consequence.

Afflictions (poison, disease, possession, curses, ongoing exposure) don't follow the interval table. When the affliction is identified, its source sets what worsens it, what suppresses it, what allows recovery, and whether treatment cures it or only eases the symptoms. A setting book can give specific afflictions, and creatures that recover in unusual ways, their own rules; where it does, those rules win.

6.7 Dying and Stabilisation

Becoming Dying. After Resistance and stacking, life-threatening physical harm that reaches tier 6 makes a living character Dying, if lethal stakes allow that outcome (§10.2). It also gives a Scar as normal (§6.3). The character is incapacitated and can't take ordinary actions. Start a 3-segment Dying clock. There is no extra *dying* penalty; the injury already records the harm. Mental defeat, capture, exhaustion and ordinary fear never start a Dying clock, and a running-dry status is never lethal on its own.

Cadence. When Dying begins, set how the clock advances: at the end of each exchange after the one in which Dying began, during a scripted conflict; or after a stated fictional interval, outside one. The clock advances because the interval passes, not because someone attempts treatment. Several characters can act in the same interval without advancing it further. Moving into or out of a scripted conflict carries the existing deadline over; it doesn't advance the clock or grant extra time.

Further harm. Each further unmitigated physical harm that could worsen the mortal injury marks one extra segment, even though the injury stays at tier 6. One action or hazard can mark at most one extra segment. When the third segment is marked, the character dies.

Stabilising. An adjacent character with suitable means rolls Medicine vs. Hard 18, adjusted by Truths. An ability or a fitting supernatural method can offer another way.

- Success: the patient is stable and the clock stops.
- Success at a Cost: stable, with the normal cost.
- Failure: still Dying. The attempt uses the action, but doesn't advance the clock.

Stabilising doesn't erase marked segments, reduce the injury, refill pools or return the patient to the conflict. A stable patient can be moved with care. If a new event makes them Dying again, the clock resumes from its recorded segments.

Definitive care. Emergency care can stabilise a tier-6 life-threatening injury but can't lower its tier. Lowering it below tier 6 takes definitive care: a suitable procedure, facility or specialist, or an ability or item that explicitly heals the injury (such as *Miracle Worker*, *Not on My Table* or *healing gel*). The GM states what that requires when the injury is assessed and doesn't add requirements once they are met. When definitive care brings the injury below tier 6 and removes its immediate lethal cause, clear the Dying clock.

Immediate death. Use it only when the established outcome leaves no plausible time for rescue, or a specific killing method calls for it (such as a creature's killing strike in a setting book). Announce that danger before the roll, and allow Resistance, escape or interruption. Once such an outcome is fully resolved, don't add a Dying clock to undo it; equally, don't skip the clock for an ordinary mortal wound just because the description is graphic.

Setting-specific harm. If a setting gives a condition (such as blood loss) its own tiers and stabilising rules, use those instead of a Dying clock, not as well.

After a death. Resolve the death and its established consequences. The group may remember the character through Beliefs, relationships, keepsakes or later story developments; death creates no separate points or automatic Truth.

6.8 Permanent Harm

Where it comes from. An injury doesn't become permanent just because its tier is high. Permanent harm needs an established permanent-injury stake, a specific effect or creature rule, a voluntary bargain, or a Scar-giving event. Tier 6 always gives a Scar (§6.3), but never by itself severs a limb, destroys an organ, lowers a maximum pool or causes any other permanent mechanical loss.

The wound heals; the loss stays. A permanent change can outlast the injury that caused it. When *severed hand-4* has healed, the hand is still gone: the status measured the acute wound. Record the lasting change as a tag or a character fact, not as a status that never heals.

Adapting. Training, help, prostheses, old-world works or supernatural intervention can change how permanent harm affects play. A replacement doesn't automatically remove a related Scar, and a Scar doesn't make a replacement useless. Don't reduce maximum pools, Edge, skills or Refresh unless the effect or an agreed Advance says so.

7. Progress Clocks

- Sizes: 4 (simple), 6 (complex), 8 (daunting), 12 (epic). Specific rules may prescribe other sizes, such as the 3-segment Dying clock (§6.7).
- Player clocks tick with the Advance effect (1 Power = 1 segment).
- Danger clocks tick when the GM spends Woe (1 Woe = 1 segment) or on failures.
- Racing clocks: two clocks run together (e.g. *Crack the vault 8* vs. *Guards arrive 6*).
- Linked clocks: filling one opens or unlocks another.
- Downtime projects normally use 8- or 12-segment clocks; a specific ability or project may prescribe another size, including 6 segments.

8. Truths

Truths are tags that describe the scene, location, faction, or campaign.

- Scene Truths: *Pitch Dark*, *Knee-Deep Water*, *Hostile Crowd*. Each relevant Truth raises or lowers Difficulty by one step (±3) per rank, makes an action impossible or possible, or can be invoked with a Tychē Point.
- Rank. A Truth is rank 1 unless a number follows its name: *Pitch Dark 2* shifts Difficulty by two steps (±6). Rank 2 is the most a Truth can have; anything stronger makes the action impossible.
- Truth cap. Easier and harder Truths cancel step for step. Whatever is left shifts a roll's Difficulty by at most three steps (±9).
- Campaign Truths: 3–5 world statements agreed at session zero (*Magic is real but feared*, *The Corporation owns the police*).
- Creating Truths: players use the Create effect or spend 2 Momentum; the GM spends 2 Woe. A new Truth is rank 1. Pay the same cost again, at once or later, to raise it to rank 2. The GM may also allow this for an existing Truth when the fiction supports it (*Thick Mist* thickening into *Thick Mist 2*).
- Recording a Truth. When a Truth is created, or an existing fact first matters mechanically, state its scope (the people, objects, place, or circumstances it affects), its rank and its removal condition. It only applies within its scope. It also ends when its duration expires; a removal condition never extends a duration (§5). *Smoke fills the courtyard* — sight-based actions in the courtyard; ends when the smoke clears.
- Removing Truths: use the Weaken or Create effect as a counter ("I kill the lights" removes *Brightly Lit*), at GM discretion. Each counter lowers a Truth by one rank, and a rank-1 Truth that is countered is gone.

See Module C for using Truths to drive a sandbox campaign.

9. Momentum and Woe

9.1 Momentum (shared by the party, max 6)

Gain: unspent Power from rolls. Decay: lose 1 Momentum at the end of each scene.

Spend	Cost
Add a bonus die	1 (first) / 2 (second)
+1 Power on a success	2
Ask the GM a question (Discover)	1
Create a Truth	2
Seize the initiative / change your scripted action in a conflict	2
Reduce Woe by 1	2

Paying with Woe. When the party is short, any spend in this table except *Reduce Woe* can be paid in whole or in part by giving the GM 1 Woe per Momentum, with the GM's approval. Bonus dice can always be paid this way (§2.4).

9.2 Woe (the GM's pool)

Starting Woe: 2 per PC at the start of a session. GM gains Woe from: players buying dice or other Momentum spends with Woe, Success at a Cost (if chosen), failures (+1), complications bought off (+2), refused compels, Escalation (+1, §9.3), and dangerous scene Truths (+1 per scene).

GM spend	Cost
Complication or minor twist	1
Tick a danger clock	1 per segment
NPC bonus die	1 per die
Activate an NPC/monster special ability	1–3
Create a Truth	2
Reinforcements	1 per minion, 3 for a significant NPC
Interrupt in a conflict (change an NPC's scripted action)	3
Cancel an NPC's complication from the dice (§2.6)	2

GM spend	Cost
Make a roll Risky 1, or raise its Risk by 1 (§2.7)	1

9.3 Escalation

Some acts and items make a situation more dangerous just by being there. They carry the Escalation tag. It gives no bonus and doesn't count toward the tag cap.

- Escalation items. Openly carrying an Escalation item into a scene gives the GM +1 Woe, once per item per scene. An item hidden before the scene starts doesn't count until it's drawn.
- Escalation actions. Declaring an Escalation action (reading a forbidden text, waking a dead machine, breaking a sacred taboo) gives the GM +1 Woe before any roll.
- Keep it rare. A playbook's starting kit should hold no more than one or two Escalation items. Settings list their own.

10. Conflict System

Every big contest uses full scripting. Small obstacles are handled with a single roll; anything that meets the conflict test below becomes a scripted conflict.

10.1 When It's a Conflict

Use a conflict when any two of these are true:

- Both sides have a clear intent that excludes the other's.
- The opposition is a named NPC, a group, or a significant force (not a single guard or a locked door).
- The outcome would change the story (a relationship, a location, a faction, someone's life).
- A single roll would feel anticlimactic to the table.

10.2 Setup

1. Declare intent and stakes: each side states what it wants if it wins. Establish what losing lets the other side do, whether death, permanent injury or capture is at stake, and what surrender or withdrawal could look like.
2. Choose the conflict type (§10.4), which sets the skill for each action.
3. Disposition: the leader of each side rolls 2d12 + the type's Disposition skill + the highest Edge in that skill's pool divide the result by three (round down). Next, add +1 per helper and every flat bonus or penalty to starting Disposition (from abilities, creature rank, conditions and similar effects) at full value. Flat modifiers have no stacking cap. After all these modifiers, apply a minimum of 1, before Superiority. That is the side's Disposition (usually 8–11), one shared total for the whole side (§10.7).
4. Superiority: reduce the opposing side's starting Disposition by your Superiority (§10.3). Only this reduction can bring starting Disposition to 0; resolve that trivial conflict as described there.
5. Track Disposition as a number or a clock if the conflict continues.

Intent sets the scope. Beating a side whose intent is to hold a doorway doesn't, by itself, let you kill them all, take everything they carry or achieve some unrelated goal.

Lethal stakes. A lethal outcome must be established before the roll or exchange that can produce it. Stakes can change mid-conflict when circumstances do, but never retroactively: the GM explains the new danger and lets those affected respond before it is resolved. Lethal stakes make death possible; they don't make every hit deadly.

New conflict or the same one? Set fresh Disposition only for a genuinely new conflict: a materially different intent or changed circumstances. Moving through a doorway, switching from a Fight to a Chase, or changing tactics in the same unresolved struggle continues the same conflict; carry over Disposition, used injury trades (§10.9) and Taken Out characters.

10.3 Superiority

Preparation can weaken an opponent's position before a conflict begins. Gain 1 Superiority for each of the following, to a maximum of 3:

- Know Thy Foe: Obtain information that reveals an exploitable weakness, motive, fear, or vulnerability.
- Know Thy Battlefield: Secure an advantageous position or understand circumstances that materially favour your approach.
- Know Thy Players: Put a plan, alliance, resource, or other preparation into place that materially improves your position.

Each category grants Superiority only once. Preparation must apply to the opposing side and the declared stakes of the conflict.

After calculating starting Disposition, applying all other modifiers and enforcing the minimum of 1 (§10.2), reduce the opposing side's starting Disposition by your Superiority, to a minimum of 0. This adjusted value is its starting Disposition for all purposes, including recovery and compromise.

Overwhelming preparation. If Superiority reduces the opposing side's starting Disposition to 0, the conflict is trivial: hand-wave it as a win at no cost, within the declared intent and stakes. Do not script volleys or make further conflict rolls. Refer to the none or trivial row of compromise (§10.12); this automatic win imposes

no compromise cost. A low roll or negative flat modifiers alone cannot trigger this result.

Superiority is not tracked or spent after the conflict begins. Abilities retain their normal benefits when their results also qualify for Superiority. Evaluate the concrete information, position, or preparation—not the ability's name. Rephrasing one advantage does not create additional categories; additional categories require distinct material advantages. Determine Superiority only at conflict setup.

10.4 Conflict Types

Type	Disposition	Attack	Defend	Feint	Maneuver
Fight	Fight or Brawl	Fight / Brawl / Shoot	Athletics / Endure	Deceive	Notice / Stealth
Chase	Athletics or Drive/Pilot	Athletics / Drive	Athletics / Drive	Stealth	Notice / Survival
Argument	Persuade	Persuade	Will	Deceive	Empathy
Negotiation	Persuade	Persuade	Empathy	Deceive	Investigate
Infiltration	Stealth	Stealth / Tech	Deceive	Craft	Investigate
Battle (armies)	Lore (tactics)	Fight	Endure	Deceive	Lore
Spirit Duel	Arcana	Arcana	Will	Deceive	Lore
Hack / Netwar	Tech	Tech	Tech	Deceive	Investigate
Survive the Wild	Survival	Survival	Endure	—	Notice

Settings can add types; each type needs one skill per action and a Disposition skill. A dash (—) means that action isn't available in that type.

10.5 Scripting and Volleys

Each exchange is three volleys. Each side secretly scripts three actions in order, then they are revealed one volley at a time.

- Rotation: every team member must act once in an exchange before anyone acts twice.
- Changing your script: spend 2 Momentum (players) or 3 Woe (GM) to swap one unrevealed action.
- Independent: roll against Standard 15 (adjusted by Truths and the opposition's tags).
- Versus: both sides roll; the higher total wins, and the margin over the loser's total decides Power (meet = 1, +1 per full 3).

	Attack	Defend	Feint	Maneuver
Attack	Both roll independently	Versus	Attack independent; Feint does nothing	Versus
Defend	Versus	Both roll independently	Feint independent; Defend does nothing	Versus
Feint	Attack independent; Feint does nothing	Feint independent; Defend does nothing	Versus	Versus
Maneuver	Versus	Versus	Versus	Both roll independently

10.6 Actions and Effects

Action	Default effect of Power
Attack	Remove Disposition from the opposing side equal to the Power committed, +1
Defend	Each Power restores 1 of your side's Disposition (up to the starting value)
Feint	Remove Disposition from the opposing side equal to the Power committed, +1; the Feint ignores Defend
Maneuver	Spend Power on: Impede (1: opponent −3 on next roll), Gain Position (1: +1 bonus die on next roll), Disarm (3: remove an action type or burn a key tag for the rest of the conflict), or Create a Truth (2 per rank; explicit discounts follow §5)

Effort (including Effort for +1 Power), Momentum, Woe, Tychē Points, tags, and Truths all work normally.

Three layers, three jobs.

Layer	What it measures
Disposition	Whether your side can keep pursuing this conflict's intent. One shared total per side (§10.7). Reduced by Attacks and Feints; restored by Defend
Pools	Your capacity for Effort, abilities and Resistance. Spent by you; restored by rest (§6.5)
Statuses	What has actually happened to you. Inflicted by direct harm, injury trades, hazards and compromise; recovered by treatment and time (§6.6)

Losing one doesn't reduce the others. Apply more than one only when a rule says so.

Scenery Maneuvers

A Maneuver can use the scene itself. Instead of one of the four listed options, spend Power on a scenery action from the table below.

Requirements.

- The action needs a feature: a Scene Truth, or something the GM has established as present (the chandelier, the grease barrel, the ledge). If nobody has established it, create it first with Create a Truth or Discover.
- Name the feature in your script. If it is gone when your Maneuver is revealed (a Disarm or Create a Truth that removes it, or an opposing scenery action that used it), the Maneuver has no effect and its Power is lost.
- Each feature supports one scenery action in a conflict unless the GM says it can be reused. Mark it *used up*.
- The action uses the conflict type's normal Maneuver skill and is resolved as a normal Maneuver (§10.5).

Result and Danger. The table gives what you get for the Power spent and a Danger. The GM applies the Danger when the Maneuver is a Success at a Cost, or by spending 1 Woe on any scenery action. A Danger is a tier-1 status (Resistable as usual), a lost action, or a Truth that works against you. Describe the Danger to fit the action. The outcome must never contradict itself: if the boulder fell, it fell on everyone it could reach.

Action	Needs	Power	Result	Danger
Grab a Ride (swing, slide, vault)	A fixture and a clear path	2	Gain Position and move to any spot in the scene. You can't be Impeded this volley.	You land hard: tier-1 *winded*.
Tip & Drop (statue, boulder, cargo)	A heavy object and something below it	3	Remove 3 Disposition from the opposing side, with no +1 bonus.	Debris reaches an ally: one participant on your side takes tier-1 *struck*.
Floor Collapse	A support (beam, line, bridge)	4	Create a rank-2 Truth (*Collapsing Floor*) in the area. It is scoped to that area.	You are hit by the snap: tier-1 *stunned*, or a lost tag.
Carpet Pull	A floor covering and unwarned foes	2	Impede every opposing participant's next roll this exchange (−3).	You are left holding the carpet: your next Defend is at −1.
Drape Drop (curtains, nets, sails)	Hangings or a net	1	Impede one opponent (tangled). The cloth can't be used again.	Your weapon is tangled: your next action is at −1.
Shove 'Em Off (ledge, rail, stairs)	An edge and an adjacent target	3	One opposing participant loses their next scripted action while they recover.	You are pulled along: tier-2 *off balance* unless you Resist. A fall is lethal only if lethal stakes are established (§10.2).
Make a Hazard (brazier, barrel, tank)	Fuel, fluid or something breakable	2	Create a rank-1 Truth (*Burning*, *Slick Floor*) scoped to the area.	You are in the area: the Truth applies to you.

Hazard Truths and Woe. A hazard Truth that endangers participants is a dangerous Scene Truth (§9.2): the GM gains the usual +1 Woe for the scene.

Other conflict types. Scenery is whatever the contest is fought over. In an Argument it might be a crowd, a witness or a document. In a Hack, it might be an access point or a shared network. In a Chase, it might be a market stall or a bridge. Pick the nearest scenery action and rename its pieces.

Conflict attacks. An ordinary successful Attack or Feint removes Disposition, and nothing else: no pool points, no status. Describe the loss to fit the fiction (driven back, an opening lost, cut off, a glancing blow); the description doesn't create an injury. Armour and Resistance don't reduce Disposition loss unless an ability says so.

Attack and Feint loss. When a successful Attack or Feint applies its default Disposition-loss effect, it removes Disposition equal to the Power committed to that effect, plus 1. This bonus is Disposition loss, not additional Power. Apply an eligible injury trade afterward (§10.9).

Direct harm. Outside a conflict, harmful effects inflict statuses (§5, §6). Inside one, an ability or hazard can inflict a status only if it says so; resolve that status separately from any Disposition loss. Don't add harm to an ordinary Attack just because the weapon is dangerous or the narration is violent.

A side at 0 Disposition loses the conflict (§10.7), but its members aren't necessarily harmed (§6.4).

10.7 Shared Disposition

Each side has one Disposition total. Determine it normally, but do not divide it among participants. There are no per-member Disposition shares and no spill-over between members: Disposition loss applies to the side's shared total.

Successful Attacks and Feints reduce the opposing side's Disposition by the Power committed, plus 1 (§10.6). Successful Defend actions restore your side's Disposition, up to its starting total. Ordinary Disposition loss does not inflict statuses, drain Pools, or individually remove participants.

A character stops participating when a status, explicit effect, voluntary withdrawal, or established circumstance prevents them from pursuing the side's objective. Their removal does not directly change shared Disposition.

A side loses when its Disposition reaches zero or none of its participants can continue pursuing its objective. Complete independently resolving actions before checking victory. Resolve mutual defeat and compromise normally.

Injury trades protect shared Disposition, with no more than one participant accepting an injury against each Attack or Feint.

10.8 Conflict Gear

Gear in conflicts is written as an action tag that only applies to the listed action(s). It counts toward the +2 tag cap.

Example gear	Tag
Sword, knife	+1 Attack
Shield, cover	+1 Defend
Spear, polearm, rifle with scope	+1 Maneuver
Smoke grenade, false papers	+1 Feint
Damning evidence (Argument)	+1 Attack
Signed treaty draft (Negotiation)	+1 Maneuver

10.9 Accepting Injury

The trade. Injury trades protect your side's shared Disposition (§10.7). Once per character per conflict, when a successful Attack or Feint would reduce your side's Disposition, you may accept a lasting injury to cancel some of that loss. No more than one participant may accept an injury against each Attack or Feint. Declare it before the loss is applied, even if the loss would reduce your side to 0:

Injury you accept	Disposition loss cancelled
Tier 2	1
Tier 3	2
Tier 4	3

Name the injury, say how taking it keeps you in the fight, and record it at once. It must follow from the action: a blade gives *slashed forearm*, not *embarrassed* an occult assault might give *fractured concentration*. The injury stacks normally (§5.1) and must add a real cost: a new relevant status, or a worse one.

You can't:

- pay with an injury you already have, or with a status that has no relevant effect or is wholly covered by an equal or worse status;
- rename, split or file the injury somewhere irrelevant to dodge its cost;
- accept an injury that would take a status to tier 6;
- use the trade after you are Taken Out, or against voluntary costs or loss from Maneuvers, hazards or special effects (unless their rules allow it);
- cancel a status, an execution or any outcome that isn't ordinary Disposition loss, or cancel more loss than the Attack or Feint inflicted;
- invent a bodily injury to pay for a purely logistical setback.

The trade cancels incoming loss. It doesn't restore Disposition already lost or raise your starting Disposition.

It's a payment. Armour, Resistance, cancellation effects and side benefits can't reduce or prevent an accepted injury (§6). It heals through treatment and time like any other injury.

One trade per Attack or Feint. Only one participant's injury can cancel loss from a single Attack or Feint, and each point of loss can be cancelled only once.

Refresh. The trade refreshes only when a genuinely new conflict begins (§10.2).

10.10 Taken Out, Volleys and Mutual Defeat

Finish the action first. Complete all the costs, choices and effects of the action being resolved before applying removal it causes. After that, the removed character can't act (§6.4).

Independent actions. When two actions resolve independently in the same volley, both resolve even if one takes someone out. Neither cancels the other. Check victory after both.

Side defeat. When a side's Disposition reaches 0, or none of its participants can continue pursuing its objective, that side loses (§10.7). The winner achieves its intent, subject to compromise (§10.12). Don't make the losing side play out the same contest again; a new conflict needs a materially different intent or changed circumstances.

Mutual defeat. If both sides reach 0 in the same volley, neither wins outright. Resolve the compatible parts of both intents and a shared setback within the stakes. No compromise is calculated.

10.11 Conceding

Offer it before the roll. Before the next roll, a side may offer a concession instead of fighting on. State what the other side gains, what the conceding side keeps, what injuries, losses or obligations it accepts, and how the conflict ends. It must give the other side a meaningful success and fit the fiction: a mindless predator doesn't take surrender, so against one the offer may need an escape route or a sacrifice. If the sides don't agree, the conflict goes on. You can't offer a concession after the deciding roll.

Settle it. An accepted concession ends the conflict. Apply its terms with no roll to see whether they happen, and don't also apply compromise unless the terms include it. Costs accepted in a concession can't be Resisted or prevented afterwards; injuries in the terms heal normally. Conceding gives no automatic Tychē Point.

10.12 Compromise

When one side hits 0 Disposition, the conflict ends. The winner gets their intent but pays a compromise based on how much Disposition they have left:

Winner's Disposition left	Compromise
Full or nearly full	None or trivial
More than half	Minor — loser gets a small concession; winner takes a tier-2 status
Less than half	Significant — loser gets part of its intent; winner takes tier-3 statuses or loses gear
1–2 points	Major — near pyrrhic victory; tier-4 statuses, a lost ally, or a new danger clock

Settling the outcome.

1. Determine the winner and the compromise.

2. State what the winner achieves and what the loser keeps or gains.
3. State every cost in full: who receives each injury and at what tier, and any non-injury costs. If there are alternative costs, state them now.
4. Credit existing injuries (below).
5. Resolve Resistance against what remains.

The listed tier doesn't apply to every member of the winning side; the costs say who pays.

Existing injuries count once. An injury taken during this conflict, including one accepted through the trade, pays for one injury cost assigned to that character if its current tier equals or exceeds the required tier. Each injury pays for one cost only. Injuries can't be pooled, split, moved between characters or credited against a non-injury cost. An injury already treated below the required tier no longer pays. Don't add injury costs because an existing injury pays for one.

Resisting compromise. Players may Resist imposed compromise statuses as usual (§6), except costs they agreed to. Resistance can reduce or remove the injury, but it doesn't revoke the loser's gain or any other stated cost. Don't add a replacement cost because Resistance removed an injury.

10.13 NPCs and Harm

- No injury trade. Ordinary NPCs and minion groups can't use the injury trade. A named rival built as a full PC can; any other NPC needs a trait that grants it.
- Resisting. Ordinary NPCs don't have pools (§6.1). An NPC reduces harm only through its listed armour, traits or abilities. Even then, it gets at most one reduction per imposed status application, and that reduction can't touch Disposition loss or an accepted payment.
- Defeat. An NPC side at 0 Disposition is defeated in this contest. Capture, escape, injury or death follow the stakes and the outcome. Use a Dying clock for an NPC only when rescuing them matters to play, and never use that shortcut to make a rescue impossible after offering it as a goal.
- Special creatures. Specific rules win: creatures with their own setting rules (such as being hard to kill, killing strikes or unusual recovery) keep them; machines and cyborgs shut down and are repaired rather than dying. An immunity stops an unsuitable status, but not Disposition loss in a contest the creature can lose.

10.14 Order of Resolution

1. Establish intent, stakes and exits (§10.2); set starting Disposition and apply Superiority (§10.3). If overwhelming preparation resolves the conflict, stop here; otherwise script the volley.
2. Pay pre-roll costs (Effort for dice, Help); resolve any running dry (§6.1).
3. Roll and determine the result and Power.
4. Make post-roll choices (Effort for Power) and pay them; resolve any running dry.
5. Separate Disposition loss from statuses imposed by a rule. An Attack or Feint's default loss is its committed Power + 1 (§10.6).
6. Offer eligible injury trades (§10.9).
7. Apply the remaining Disposition loss.
8. Resist imposed statuses (§6); pay; resolve running dry from Resistance.
9. Stack what remains; resolve tier 6: scope, Scar, Dying (§6.3, §6.7).
10. Resolve any independent action in the same volley.
11. Check removal, victory and mutual defeat. Before the next roll, either side may offer a concession.
12. Settle compromise (§10.12).
13. Afterwards, recover each layer by its own procedure (§6.5, §6.6).

Which rule wins.

1. Explicit amendments and replacements in this damage cycle.
2. Current creature-specific rules and explicitly revised abilities.
3. The general procedures of this damage cycle.
4. Earlier general rules.

A rule overrides another only on the subject it addresses. An ability that heals a status doesn't also restore Disposition, refresh an injury trade or erase a Scar.

10.15 Keeping It Fast

- Disposition of 8–11 should resolve in two or three exchanges.
- NPC sides script on index cards; minions act as a single group with one script.
- Table guideline: about 15–20 minutes per conflict.

10.16 Area Effects

Provisional for playtesting. This Area Rule replaces earlier per-member Disposition wording and the rule that gave full effect to one target and tier-1 splash to the others.

An area effect affects everyone within its established area whom the effect can reach. Establish the area and affected participants before resolving it. An area effect does not automatically distinguish allies from enemies; selective targeting requires an explicit rule or circumstances that keep others outside its reach.

Disposition loss in conflicts. When an area Attack or Feint applies its normal Disposition-loss effect:

1. Apply the committed Power + 1 to the opposing side's shared Disposition once.
2. Add 1 Disposition loss for each additional opposing participant affected beyond the first.

Do not assign Disposition loss to individual participants. There are no individual shares or spill-over.

Example: an area Attack commits 3 Power to Disposition loss and affects three opposing participants. It removes 6 shared Disposition: 3 Power + 1 for the normal Attack, +2 for the two additional participants.

Apply any eligible injury trade against the combined loss (§10.9). The area Attack remains one Attack: no more than one participant may accept an injury against it.

Explicitly inflicted statuses. When an area effect explicitly inflicts a status, every affected character receives the full purchased or listed tier. Resolve each character's Resistance or NPC harm reduction separately, then stack the remaining status normally.

Example: an effect that inflicts *burned-3* in an area inflicts *burned-3* on every affected character, not tier 3 on one and tier 1 on the others.

An ordinary conflict Attack or Feint still inflicts no status merely because it is an area effect. Apply both Disposition loss and statuses only when an explicit rule grants both. Outside conflicts, resolve statuses normally; do not introduce Disposition loss.

Playtest flags. Test whether splash makes large groups lose shared Disposition too quickly; test full-tier statuses against groups, including separate Resistance costs; and test Unleash and NPC area Specials against this common procedure.

10.17 Interpose

Bulwark Role Trait. Once per exchange in a conflict, when an ally would receive an imposed status that you can physically or otherwise fictionally intercept, you may take that status in their place. Outside conflicts, you may likewise intercept a fitting incoming status; this trait adds no separate frequency limit outside conflicts.

Declare Interpose before the original target rolls Resistance or applies any harm reduction.

- Redirect the entire incoming status to yourself. The original target receives none of that status.
- Resolve your own normal Resistance or NPC harm reduction against it, then stack what remains normally. Do not first apply the original target's Resistance, armour or other reduction.
- Ordinary NPCs remain limited to one reduction per imposed status application (§10.13). Interpose itself redirects the status; it does not reduce its tier.
- Interpose does not redirect or reduce shared Disposition loss.
- You cannot Interpose against an accepted injury-trade payment, a running-dry status, an agreed concession cost or a compromise cost.
- You must be able to intercept the source of harm in the established fiction. You cannot protect an ally from an area effect that already affects both of you.

Example: a guardian with Interpose can step into a shock-baton strike that would inflict *jolted-3* on an ally. The guardian receives *jolted-3* and uses its own eligible reduction. It cannot intercept ordinary Disposition loss or shield that ally from a blast that already catches them both.

11. Playbooks

Each playbook is a one-page sheet with:

- Base pools and Edge
- Anchor skill (must be +3 or +4)
- Special abilities: 1 free at start (6–8 options); more cost Refresh at creation or come from advancement. Major abilities are marked ★.
- XP trigger: one playbook-specific behaviour that earns XP
- Load-out list: playbook items plus generic items, Blades-style light/normal/heavy load
- Relationship prompts: 1 ally and 1 rival

Settings rename and reskin playbooks (Adept becomes "Hedge Witch" in fantasy, "Netrunner" in cyberpunk) but keep the structure.

11.1 Generic Core Playbooks

Playbook	Anchor	Base pools (Sōm / Mēt / Psy / Pne)	XP trigger	Concept
Bellator	Fight or Brawl	12/10/6/8	Address a challenge with force or threats	Front-line muscle
Furcifer	Stealth	8/12/8/8	Address a challenge with stealth or precision	Infiltrator, scout, thief
Savant	Lore or Investigate	7/8/13/8	Address a challenge with knowledge or insight	Scholar, detective, scientist
Interlocutor	Persuade	7/9/9/11	Address a challenge with charm, lies, or bargaining	Diplomat, con artist, leader
Explorator	Survival	11/11/7/7	Address a challenge with endurance or the land	Ranger, pilot, explorer
Adept	Arcana or Tech	7/8/9/12	Address a challenge with your powers or gadgets	Mage, psychic, hacker

12. Advancement

12.1 Earning XP (end of session)

1 XP per "yes" unless noted:

- Did you hit your playbook XP trigger? (1, or 2 if it happened in a desperate scene)
- Did you accomplish your Goal? (+2)
- Did one or more of your World, Other, or Self Beliefs drive a meaningful decision?
- Did your Instinct get you into trouble or save the day?
- Did you face consequences from a weakness tag or Scar?

The Belief question awards at most 1 XP per session, not 1 XP per Belief. Upholding, questioning, or acting against a Belief can qualify when it drives a meaningful decision; merely reciting or rewriting it does not.

MVP vote: the table votes on one standout moment each session; that player gets +1 Tychē Point at the next session (above Refresh, within the cap).

12.2 Spending XP (every 6 XP = 1 Advance)

- +1 to a skill (following the pyramid rule)
- +3 to one pool, or +1 Edge (max 3 Edge per pool)
- A new playbook special ability (★ abilities also cost 1 Refresh)
- A new power tag, or rewrite a weakness tag into a power tag
- +1 Refresh (buys back Refresh spent on abilities or artifacts; max base 3 + 1 per 3 Advances)
- A Focus ability from the next tier (requires 3 Advances per tier)
- +1 Effort Level (to Level 2 after 3 Advances; Level 3 after 9 Advances)

12.3 Reviewing Beliefs and Instincts

Review the relevance of your Beliefs at session end; ordinary revisions happen at milestones. Reaffirm, revise, or replace them to reflect development in play.

- Reaffirm: keep a conviction and commitment that still matter.
- Revise: update a fulfilled or obsolete action clause while keeping the underlying conviction.
- Replace: write a new Belief when experience changes your outlook or the former commitment no longer belongs in the campaign.
- Relationships: review an Other Belief when the relationship meaningfully changes; agree on shared premises with the other player as in §3.5.

Acting against a Belief does not automatically remove Tychē, impose a status, damage a pool, or force a rewrite. The player decides whether the experience leads to reaffirmation or change. Do not rewrite a Belief during a decision merely to claim a reward. Rewriting alone grants neither XP nor Tychē.

Keep one World, one Other, and one Self Belief. Goals remain separate and are rewritten each session. Instincts remain separate and can change at milestones.

13. Example of Play

Kade, a *Reckless Furcifer who Never Leaves Anyone Behind* (Mētis Edge 1, Effort Level 2), is creeping through a warehouse to free a captured friend. Scene Truths: *Dim Lighting*, *Patrolling Guards*.

- Roll: Stealth +3, power tag *quiet boots* +1, power tag *knows this district* +1 (tags capped at +2). The GM sets Hard 18 but *Dim Lighting* lowers it to Standard 15. Kade needs 10+ on the dice.
- Effort, part 1: Kade spends 3 − 1 Edge = 2 Mētis for a bonus die → 3d12 keep 2.
- Result: dice show 9, 9, 4 → keep 9 + 9 = 18, +5 = 23. That's 8 over → 3 Power, plus doubles on a success → +1 = 4 Power.
- Effort, part 2: Kade spends another 2 Mētis for +1 Power → 5 Power.
- Spend: Advance the *Reach the Cell* clock by 3 (3 Power), Discover (1 Power): "Where is the key?" — "On the sergeant's belt." 1 Power left → +1 Momentum.
- Later: the sergeant's dread patron, a bound spirit, lashes out with *terror-3*. Kade Resists with Pneuma (Edge 0), so 2d12: highest die 7 → cost 2 Pneuma. The status drops to *terror-1*.
- Compel: the GM compels *Reckless*: "You can't wait for backup; you go in now." Kade accepts and gains +1 Tychē Point.

14. Design Notes — What Was Kept, Changed, Cut

Source	Kept	Changed	Cut
Fate	Skill pyramid, Tychē Points, invoke/compel, Refresh as cost of power	Aspects are replaced by tags and Truths	Fudge dice, stress boxes
Cypher	Pools, Edge, the sentence, Effort on rolls and on Power, cyphers and artifacts (Module A)	Four pools instead of three; Effort buys bonus dice instead of lowering difficulty	d20 task levels, GM intrusions (replaced by compels and Woe)
:Otherscape	Power/weakness tags, statuses with tiers, effects, burning tags	Power comes from roll margin; tag cap +2	Themebooks, Improve/Abandon tracks
Mouse Guard	Full conflict scripting, Disposition, compromise, BIG, weapons as action bonuses, the Grind (Module B)	Disposition from 2d12; actions spend Power	Nature, Persona
Blades	Playbooks, resistance, stress-as-currency, clocks, load-out	Stress tracks are the four pools	Action dice pools, Position/Effect grid, crew sheets
2d20	Momentum, Woe, Truths, Module C, buy-offs, Escalation	Momentum from unspent Power; Truths shift Difficulty; complication range → Risk die (§2.7)	d20 roll-under

14.1 Known Risks

- Currency load: pools + Tychē + Momentum + Woe is the upper limit for medium crunch. Keep spend menus short on the sheet.
- Modifier range (revised): max is skill +4, tags +2, helpful status up to +6, Tychē invoke +2. Statuses are now the largest swing. Playtest a ±3 status cap.
- Effort for Power may make high-Edge characters very efficient. Watch Edge-3 pools where Effort is free; consider a minimum cost of 1.
- Resistance dice (revised): Edge now adds Resistance dice (2 + Edge, keep the highest) instead of reducing the cost, and only a double 12 is free. Below Edge −1 you keep the lowest of |Edge| dice, so stacked penalties (such as *Exposed* and *Shaken* on a 0-Edge pool) make Resisting very expensive; watch how often that happens. High-Edge pools still pay about 1 per Resist, so watch whether Resistance drains pools faster than before, and whether the double-12 result (1–6%) is too rare to matter.
- Four pools means more pool points to track. The sheet should put all four in one row with Edge beside each.
- Conflict length: with scripting used for every big contest, the conflict test (§10.1) is what stops overuse.
- Running dry (revised R3): running dry now imposes a status at tier 1 + overrun instead of an automatic Taken Out, and a Scar comes from tier 6 instead of from an empty pool. Playtest the 2-recovery-points-per-tier rate for depletion statuses, the one-Scar-per-event limit, and how often Resisting at an empty pool reaches tier 4 or higher.
- Damage cycle (unified): watch whether the once-per-conflict injury trade (tier 2/3/4 cancels 1/2/3 loss) is a hard choice or always taken, and whether it drags conflicts out. Also test the compromise tiers (now 2/3/4), the healing intervals, the 3-segment Dying clock, and whether the 1-tier treatment limit makes Restore-cost abilities (*Field Medic*, *Field Surgeon*) feel too weak against lasting injuries.
- Shared Disposition: each side now has one Disposition track (§10.7), so ordinary loss no longer removes individuals. Simulated mirrored fights ran about 23.5% shorter than with personal Disposition, but the old rolled 7–12 track still ran long against a one-to-two-exchange target. Setup is now halved again (§10.2): in simulation this averaged about 6 (range 3–9) and about 6 volleys, close to a fixed track of 6. Flat starting bonuses and penalties from abilities and creature rank are applied before the second halving, so they keep roughly their old weight. Compare this with a fixed track of 5 in play. Also watch whether a lone remaining participant acting repeatedly feels heroic or too forgiving, and whether larger parties get too many injury trades.
- Attack and Feint +1: a successful Attack or Feint now removes its committed Power + 1 Disposition (§10.6). The +1 is loss, not Power, so it can't be spent on other effects, and the injury trade is applied after it. This keeps even a 1-Power hit meaningful against a starting track of about 6 and shortens conflicts. Watch whether Defend can keep pace, whether Feint becomes the default action, and how the +1 stacks with ability bonuses such as *Crowd Work* and *Every Trick in the Book*.
- Superiority: up to 3 Superiority against a starting track of about 6 can halve the opposition before the first volley. Watch whether preparation becomes routine, how often both sides claim it, and whether it double-counts preparation abilities such as *Ambusher* and *The Reveal*.

CHAPTER III

Optional Modules

Six drop-in modules for longer campaigns: one-use cyphers and dangerous artifacts, the grinding cost of travel and hardship, a sandbox where the world itself is written in Truths, downtime, factions and investigation.

Use any, all, or none. A setting book may recommend some.

IN THIS CHAPTER

Module A — Cyphers & Artifacts (Cypher) 27
Module B — The Grind & Travel (Mouse Guard) 28
Module C — Truth-Driven Sandbox (2d20) 29
Module D — Downtime (Torchbearer, Imperium Maledictum) 31
Module E — Factions, Standing & Obligations 34
Module F: Inquiry & Revelation 41

Module A — Cyphers & Artifacts (Cypher)

Cyphers are frequent, disposable power-ups that encourage players to use them rather than hoard them. Artifacts are rare, reusable items that may run out.

A.1 Cyphers

Sample cypher table (d12):

d12	Cypher	Tier	Effects
1	Healing salve / med-gel	2	Restore
2	Smoke charge	2	Create (*smoke cover*)
3	Flashbang / thunderstone	3	Attack (dazed), Weaken
4	Truth serum / mind-read charm	2	Discover ×2
5	Adrenal shot	3	Enhance (surging), restore 3 Sōma
6	Lockbreaker	3	Advance (any lock or security clock)
7	Ward token	3	Negate one incoming status of tier 3 or less
8	Phase key	4	Create Truth (*passage through the wall*) for one scene
9	Courage draught	2	Restore (fear), restore 2 Pneuma
10	Seeker	2	Discover (location of one person or object)
11	Firebomb	4	Attack (on fire), Create (*burning*)
12	Wild card	d6	Player names a reasonable Effect; GM sets the form

- What they are: one-use items or effects — potions, grenades, scrolls, nanite injectors, blessed relics, strange tech. Each has a tier (1–6).
- Using one: an action, usually with no roll. The cypher generates Power equal to its tier, spent only on the Effects listed on the cypher. Some create a Truth or a story tag instead.
- Cypher Limit: each PC can carry 2 cyphers (some playbooks or Focuses grant 3).
- Over the limit: at the end of each scene, the GM gains 1 Woe per extra cypher and may trigger a Volatile result (roll d12: 1–4 one cypher fires randomly; 5–8 one cypher is ruined; 9–12 nothing happens yet).
- Subtle cyphers (setting option): instead of physical objects, cyphers are luck, insights, or favours ("a contact owes you", "a flash of insight"). They work the same way and fit low-magic or modern games.
- GM pacing: give out 1–2 cyphers per PC per session. They should feel like loot that gets spent.

Cypher format:

> *Flashbang (Tier 3)* — Effects: *Attack (dazed), Weaken.* Form: *palm-sized canister. Draught of Iron Skin (Tier 2)* — Effects: *Enhance (armoured), Restore. Lasts one scene.*

A.2 Artifacts

- What they are: reusable items of real power — a flaming sword, a psychic amplifier, a starship's AI core.
- Tags: an artifact has 1–2 power tags (counting toward the +2 cap) and usually a special ability.
- Depletion: each artifact has a depletion rating, e.g. 1 in d12. After each use, roll d12; on that number or lower, it is depleted (broken, drained, or needs a downtime clock to restore).
- Attunement: powerful artifacts (marked ★) must be attuned and cost 1 Refresh while attuned (§4.1). A PC can attune to a maximum of 2 artifacts.
- Artifact quirks: each artifact has a weakness tag that can be compelled for Tychē Points (*thirsts for blood*, *talks too much*, *draws the Hunters*).

Artifact format:

> ★ *Ember-Brand (longsword)* — Tags: *blade of living flame, +1 Attack (conflict gear).* Ability: *spend 1 Power to add* burning *to any status you inflict.* Depletion: *1 in d12 (goes cold until bathed in a forge).* Quirk: cannot be hidden.

Module B — The Grind & Travel (Mouse Guard)

The Grind turns time, distance, and hardship into slow, steady pressure. It pairs with Mouse Guard's GM's Turn / Players' Turn structure.

B.1 Session Structure

Phase	What happens
GM's Turn	The mission. The GM presents obstacles; every roll counts as a turn on the Grind clock.
Players' Turn	Downtime after the mission. Players spend Checks to take actions: recover, research, craft, pursue Goals.

B.2 The Grind Clock

- During the GM's Turn, the GM keeps a Grind clock visible to the table.
- Each roll (including conflict actions as a group = 1 tick per exchange) ticks it by 1.
- Size by hostility: 4 (harsh: desert, deep winter, the underworld), 6 (normal wilderness or dangerous city), 8 (gentle or well-supplied).
- When it fills: every PC gains the next Grind condition they don't have yet, then the clock resets. The GM may also spend 2 Woe to tick it.

B.3 Grind Conditions (taken in order)

Order	Condition	Effect	Cleared by
1	Hungry & Thirsty	Short rests restore nothing	A meal, a Survival roll (Restore)
2	Weary	Effort costs +1	A full night's rest
3	Exposed (cold, heat, wet)	−1 Sōma Edge	Shelter and a recovery roll
4	Shaken	−1 Pneuma Edge; Fear statuses +1 tier	A Will or Empathy recovery roll, or a Belief moment
5	Sick	−1 to all rolls; can't recover pools	Medicine roll (Hard) + rest
6	Broken	Taken Out of the mission; gain a Scar	Players' Turn only

Grind conditions are statuses for Restore, but they don't stack — each is a separate condition.

B.4 Checks (Players' Turn)

- Earn Checks during the GM's Turn by applying one of your weakness tags or Scars to your own roll (−1). You earn 1 Check, or 2 if the penalty makes the roll fail.
- Everyone gets 1 free Check in the Players' Turn.
- Spend 1 Check for one Players' Turn action: a recovery roll against a Grind condition or status, a downtime clock roll, a research or crafting roll, restoring a burned tag, attuning an artifact, or a scene that pursues your Goal.
- Sharing: you can give a Check to another PC whose scene you take part in.

This makes weaknesses a deliberate resource: hurt yourself now to earn recovery and downtime later.

B.5 Travel

A journey is a Journey clock (6 for a short trip, 8 for a hard trip, 12 for an expedition). Each leg (a day or a stage), the party assigns roles; each role makes one roll:

Role	Skill	On success, spend Power on
Guide	Survival or Drive/Pilot	Make Time — Advance the Journey clock
Scout	Notice or Stealth	Spot Trouble — Discover, or cancel one encounter the GM has prepared
Quartermaster	Survival or Craft	Forage / Ration — clear Hungry for the party, or +1 Supplies
Lookout	Notice or Will	Keep Watch — the party isn't surprised; Restore Shaken

- Supplies: the party has Supplies as a status (start at 3–6). Lose 1 per leg. At 0, everyone becomes Hungry & Thirsty automatically and the Grind clock size drops by 2.
- Terrain and weather are Truths that set Difficulty (*Muskeg*, *Whiteout*, *Rapids*, *Washed-out Road*).
- Encounters: the GM spends Woe (1 for a minor encounter, 3 for a major one), or uses the Scout's failed roll.
- Portages and hard stretches: a special leg (Endure or Athletics roll for every PC); failure ticks the Grind clock twice.

Module C — Truth-Driven Sandbox (2d20)

Truths become the backbone of an open-world campaign: regions, sites, and factions are defined by Truths that players can discover, exploit, and change.

C.1 Truth Layers

Layer	Example	Lifespan
Campaign	*The old empire's roads still hold its magic*	Changes only through major arcs
Region	*Lawless borderland*, *Endless rain*	Changes through faction clocks
Site	*Flooded lower levels*, *Ghosts guard the vault*	Changes when PCs act on them
Scene	*Pitch Dark*, *Hostile Crowd*	One scene

C.2 Site Sheets

Each location gets a short sheet:

- 3 Truths (at least one hidden; at most one at rank 2)
- A Woe seed: 1–3 Woe the GM adds when the party arrives
- A danger clock (what happens if the party lingers)
- A secret (something worth discovering)
- Rumours (see C.4)

C.3 Truth Generator Tables (d12)

Roll once per column or pick.

d12	Terrain / Feature	Atmosphere	Hazard	Secret
1	Ruined fortification	Eerie silence	Unstable ground	Hidden passage
2	Dense forest	Constant rain	Disease	A traitor among allies
3	Flooded lowland	Oppressive heat	Predators	Buried treasure
4	Market town	Festival crowds	Watchful authorities	A forgotten god sleeps here
5	Mountain pass	Biting wind	Rockfall	Smuggling route
6	Abandoned facility	Flickering lights	Toxic air	Experiment gone wrong
7	River crossing	Thick fog	Rapids	Drowned village below
8	Sacred grove	Watched by unseen eyes	Spirit anger	A pact with the old powers
9	Remote camp	Desperation	Bandits	Someone is not who they claim
10	Underground ways	Echoes	Collapse	Lost civilisation
11	Noble estate	Hollow luxury	Political danger	Blackmail ledger
12	Wasteland	Unnatural stillness	Exposure	Gateway to elsewhere

C.4 Rumours

A rumour is an unconfirmed Truth. When players confirm it (Discover, investigation, or arriving), the GM rolls d12:

d12	Result
1–4	False — and someone benefits from spreading it
5–8	Twisted — partly true, with a dangerous difference
9–12	True — becomes a Truth

C.5 Faction Turns

Between sessions (or each in-world week), the GM takes a World Turn:

1. Each active faction rolls 2d12 + its rating (+1 to +4) vs. Standard 15 for its current project.
2. Power ticks the faction's project clock (sized by the change it makes, below).
3. When a clock fills, the faction creates, removes, or changes a Region or Campaign Truth (e.g. *The Guild controls the river* replaces *The river is free*).
4. PCs who hear about it can respond; PC actions can tick faction clocks forward or back using Advance.

A faction project changes a Site Truth with an 8-segment clock, a Region Truth with a 12-segment clock, and a Campaign Truth only through a major arc (C.6).

C.6 Player Influence on Truths

- Discover effects and Momentum spends reveal hidden Truths.
- Create effects and 2 Momentum create Scene Truths; bigger changes need a progress clock (8 segments for a Site Truth, 12 for a Region Truth).
- Major arcs can rewrite Campaign Truths. These are the "legacy" moments of the campaign.

C.7 Session Zero: Entanglements

Use this at the start of a campaign, after players have picked a Descriptor, Playbook and Focus but before Beliefs, Goals and tags are final. It takes about 60 to 90 minutes for four players. The result is a story map and your first Campaign Truths.

Elements. Each PC is a circle on the map. Everything else is placed on the map and joined to PCs by lines, each with a short description.

- Character (square): a named NPC, such as a mentor, a rival, a debtor or a friend.
- Organization (diamond): a group that could become a faction (C.5, Module E).
- Prop (diamond): an object that matters to the story.
- Set (diamond): a place that matters.

- Situation (triangle): an event or pressure, past, present or looming.

Phases. Go around the table once per phase. Each player adds elements and draws lines from their PC. A player can't use the same shape twice in a row. Each phase then gives a 2d12 output:

Phase	Type	Each player adds	Output for the PC
0 Setup	Setup	The Focus link and one line to another PC.	The ally and rival prompts.
1 Origin	Major	Two elements.	A Belief drawn from one of them.
2 Rise	Standard	One element.	One power tag.
3 Branching Out	Meta	One element, plus one extra: connect two non-PC elements, replace one of your own lines, or give another PC a new element.	An Instinct or a named ally.
4 Turning Point	Major	Two elements.	A weakness tag and your first Goal.

Using the map.

- Triangles. Wherever two PCs have conflicting lines to the same element, mark it. Those are the first compels and the first scenes.
- Wedges. The GM picks one line to threaten in the first session.
- Late arrivals. A new PC runs the same phases against the existing map.

Campaign Truths. Finish by writing 3 to 5 Campaign Truths (§8) from the map. Each Situation is a candidate, and each Organization that most PCs touch gives one. Mark Organizations that conflict with each other as faction candidates for C.8.

Lines into factions. When a line joins a PC to an Organization, label it so it converts directly into Module E records:

- *Sworn member of*, *commissioned by*: a membership or office Truth (E.4).
- *Patron of*, *funded by*: a patronage record (E.4).
- *Owes*, *is owed by*: a favor or obligation (E.7).
- *Fears*, *feuds with*, *hunted by*: adverse starting Standing (E.3).
- *Betrayed*, *estranged from*: a personal exception (E.4).

Props and Sets connected to an Organization become assets in its record.

C.8 Building Factions: Long Knives

If Module E is in use, use E.1A instead. Without Module E, build the starting factions for C.5 like this.

1. Place. Name the location. Record it as the first Region Truth (C.1).
2. Gather. List the groups the PCs' lines point to: Organizations from the map, plus fragments of them. Note what each wants in the area and who would oppose it.
3. Cluster. Pick about four factions that would find one another aggravating. Law or a local lord often belongs even if no PC touches them.
4. Sheet. For each faction write:
   - Has: one obvious asset and one less obvious one. These set its rating: +1 minor, +2 solid, +3 major, +4 dominant.
   - Wants: its current project, with a clock sized by the change it makes (8 for a Site Truth, 12 for a Region Truth; C.6) and the result Truth it creates or changes when the clock fills.
   - Link: how it connects to the PCs.
   - Relations: allied or hostile toward each other faction. Where it matters, write the relation as a Truth (§8).
5. Incident. One faction does something underhanded or aggressive that affects the others. Treat it as a project that has already filled: record its result Truth. The PCs may see it but can't prevent it.
6. Reaction. Give each other faction a response as a linked clock (§7), opened by the incident.
7. Future. Write the result Truth each clock creates if the PCs do nothing. Make at least one visible to the players, and bad enough that they want to act.
8. Involvement. Note how each PC is pulled in. Appeals from factions should be biased and based on limited information.

Module D — Downtime (Torchbearer, Imperium Maledictum)

Downtime is the stretch between expeditions when the party is safe enough to recover, prepare, build and answer to the people around them. It has three equal jobs: recover and prepare (treat injuries, restore tags, restock), make and grow (craft, research, adapt to loss) and connect (tend allies, settle obligations, push on the wider world). Module D adds no new currency. It runs on Checks, Power, clocks and Woe, all of which already exist.

D.1 When It Applies

- Haven. Downtime begins when the party reaches a place with shelter, food and enough safety that nobody expects an attack tonight: a village, outpost, monastery, camp or home base. The GM decides.
- Field rests stay separate. Core Rules §6.5 rests, and Module B's night's rest and Grind-condition recovery, work as written. They give no Checks or endeavours.
- A stay ends when the party leaves the haven or is forced out. Finished work stands; clocks keep their progress.
- Replaces Module B.4. If you use Module D, the Players' Turn follows these rules.

D.2 The Stay

Length and intervals. An interval is one full week. Healing intervals (Core Rules §6.6) run alongside it. *All numbers in this module are playtest values.*

Stay	Length	Free Checks per PC
Brief	Up to 3 days	1
Ordinary	About a week (1 interval)	2
Extended	Each further full week is another interval	+1 per extra interval

- Checks. Free Checks are added to any Checks earned on the expedition (B.4: applying a weakness tag or Scar to your own roll). Spend 1 Check for one endeavour. Unspent Checks are lost when the stay ends. You may give a Check to another PC whose endeavour you join.
- Stay Woe. The GM does not use expedition Woe in downtime. The stay starts with 1 Woe per PC. Woe gained from downtime rolls joins this pool, which pays for the stay's event, complications and danger clocks, then is discarded (§9.2).
- Momentum gained in downtime decays at the end of each scene and never leaves the stay (§9.1). Tychē Points do not refresh unless the downtime begins a new session (§4.1); invokes, declares and compels work as normal.
- Goals. At the end of the stay, each player writes one Goal for the next expedition (§3.5).
- World Turn (Module E). If Module E is in use, a stay contains one World Turn (E.10). The cadence with Module D is between adventures. The World Turn uses no Checks and no Stay Woe.

D.3 Upkeep

Staying costs something. Instead of a currency, the stay carries an Upkeep clock of 6. Settings may change its size or replace it with their own currency.

Standard	Ticks / interval	What it provides
Meagre	0	Shelter and food. Truth: *Poor Rest* (+1 step to Recuperate)
Ordinary	1	Reliable lodging and meals
Comfortable	2	Privacy and workspace. Truth: *Well Appointed* (−1 step to Recuperate and Make)
Hosted	0	A host provides everything. Record an obligation (E.7): the service owed, its limits, notice, and what settles it.

- If the clock fills: the haven demands payment. The GM gains 2 Stay Woe, a Debt complication appears, and the clock resets to 2.
- Routine provisioning (restock party Supplies to 4, ordinary repairs) needs no roll and ticks Upkeep by 1.
- Hospitality is not free. A host creates an obligation only when the terms are agreed. A vague claim of you owe me is an unresolved negotiation (E.7).

D.4 Endeavours

An endeavour is a stretch of focused effort during the stay.

- Routine. If failure would add nothing and the outcome is certain, no roll is needed. It generates no Power and no Momentum (§6.6).
- Uncertain. If the result matters, roll the listed skill against Standard 15, adjusted by Truths. Spend Power on Effects (§5). Unspent Power becomes Momentum, which decays.
- Success at a Cost: the GM adds a consequence, or the stay pool gains 1 Woe (player's choice, §2.5). Failure: the effort doesn't take; the GM announces any consequence before another attempt, and the stay pool gains 1 Woe.
- Light or Strenuous. A character with a lasting injury who takes a Strenuous endeavour does not progress that injury's healing interval this interval (§6.6).

Shared endeavours. A shared endeavour has one goal for the party or a subgroup. It costs 2 Checks, paid from the participants' pooled Checks.

- Choose a lead. Each participant describes their contribution.
- The lead rolls. Participants add Help as in §2.4, within the +2 bonus-die cap.
- Spend Power as usual. The result benefits all participants.
- Participants need not pay equally. Non-participants pay nothing.

Endeavour	Tag	Skill	Typical Effects
Recuperate	Light	Medicine, Empathy, Craft	Restore; restore a burned tag; mark an injury *treated* (−1 tier)
Prepare	Strenuous	Survival, Persuade, Drive/Pilot	Create a Truth (*Provisioned*, *Passage Arranged*); Discover
Make and Mend	Strenuous	Craft, Tech	Advance a project clock; Create; restore a depleted artifact
Investigate	Light	Investigate, Lore, Notice	Discover; confirm a rumour (C.4)
Develop	Light	Varies	Advance a Scar or loss-adaptation clock (D.5)
Connect	Light	Persuade, Empathy, Intimidate	Create a contact Truth (D.6a); subtle cypher (A.1); Advance a faction clock only if the affected project is established (E.10)
Sustain	Strenuous	Craft, Persuade, Lore	Remove Upkeep segments

For an unlisted activity, the GM names a skill, a Light or Strenuous tag and the nearest Effects.

- Recuperate counts as appropriate care (§6.6). It does not change treatment limits: at most 1 tier per lasting injury, then *treated* until a healing interval removes a tier. It restores one burned tag (§3.4). It cannot remove a Scar, refill pools (the 4th rest already does) or clear an affliction beyond what its source allows.
- Prepare can supply Superiority (§10.3) only against a named opposition declared beforehand, only one category per stay, and only if the preparation is concrete. The cap of 3 per conflict still applies.

D.5 Projects

A project is any goal too big for one endeavour. Use an 8- or 12-segment clock (§7), ticked by Advance. Each roll toward it costs 1 Check.

Project	Size	Notes
Crafting a notable item, restoring a workshop	8	Needs access and materials
Restoring a depleted artifact (A.2)	8	Needs fitting tools
Adapting to permanent harm (§6.8): prosthesis, retraining, workaround	8	Does not remove a Scar
Changing a Scar (§6.3)	12	Completing the clock counts as the milestone
Changing a site (C.6)	8	A Site Truth
Changing a region (C.6)	12	A Region Truth

- Milestones. For long projects, the GM names 2–3 milestones along the clock, such as *secure the premises*, *obtain equipment*, *complete the work*.
- Minimum time. A project cannot finish faster than the fiction allows, whatever the Checks.
- Unfinished projects keep their progress until the next stay.
- Optional: Study Toward an Advance. Off by default. A 6-segment clock, ticked in Develop endeavours. When it fills, the character gains 1 XP. Use it only if your table wants training to feed advancement directly (§12 has no training rule).

D.6 Between-Adventure Events

Roll d12 once at the start of an ordinary stay, before endeavours are declared, or choose a result that fits the fiction. In an Extended stay, roll again every second interval after the first. An event should offer a choice, not remove the stay.

d12	Family	What changed	Offer	If ignored
1–2	Quiet	Nothing disturbs the party	Plans proceed	—
3	Opportunity	A specialist passes through	One endeavour gets −1 step Difficulty (*Expert Help*)	They leave
4	Opportunity	A bargain on supplies	Routine provisioning ticks no Upkeep	The chance passes
5	Relationship	An ally is in trouble	A shared endeavour helps them; create a favour Truth	Their clock ticks
6	Relationship	A rival or old acquaintance arrives	Compel a tag or Belief; Connect or Intimidate to change the relationship	They act against the party
7	Obligation	A past promise comes due	1 Check discharges it if it is within the agreed terms (E.7). Refusing it follows E.7 (one Standing).	The creditor presses the claim
8	Obligation	Costs rise	+1 Upkeep tick; Sustain is −1 step this stay	Debt grows
9	Settlement	A service is short-handed	Truth *Short-Handed*: +1 step to Recuperate and Make	Services stay limited
10	Settlement	A dispute, festival or quarantine	Connect gets −1 step; arrival or departure may be restricted	The mood hardens

d12	Family	What changed	Offer	If ignored
11–12	Consequence	A faction's plan shows	Reveal the result of that faction's latest declared project action (E.10). This is not an extra tick.	It is harder to answer next stay

D.6a Reputation in Downtime

Downtime does not create reputation by itself. Distinguish the following:

- Standing (E.3) changes only through consequential deeds a faction learns of and attributes to the party.
- A reputation tag records what a character is known for. Earning one follows the applicable character-growth or setting rules; a Connect endeavour does not grant one by itself. It counts toward the normal tag cap unless an ability explicitly grants an exception; apply that exception only within its stated scope.
- An ability may establish a reputation as a Campaign Truth, as with the Bellator capstone *Legend of the Field* (Generic Playbooks §3.1). Apply the Truth and any additional benefits as that ability states.
- A contact Truth (D.4 Connect) describes a relationship with a named person. State what that relationship makes possible and whom it concerns. It does not by itself grant a reputation tag or change faction Standing.

Momentum, Woe and scene-scale Create effects cannot buy reputation (E.11). A relationship Truth (E.3) and a reputation tag apply independently: one shifts Difficulty and the other adds to the roll.

D.7 The Stay in Order

- Establish. The GM names the haven, its services and the stay length.
- Show deadlines. Reveal known changes, clocks and obligations.
- Set Upkeep. Choose a standard (D.3).
- Event. Roll or choose (D.6).
- Declare. Players declare individual and shared endeavours and spend Checks.
- Resolve. Play out only the consequential scenes. Healing intervals run alongside.
- World update. Take the World Turn here, after endeavours resolve, so the stay's results (Standing changes, evidence Truths, completed favors) are part of E.10 step 1. Without Module E, tick only clocks tied to established plans or deadlines. The GM may spend Stay Woe to tick danger clocks, but never to advance a faction project (E.10).
- Close. Discard leftover Checks and Stay Woe. Record unfinished projects, write a Goal, prepare to depart.

Example. The party spends an ordinary week (2 free Checks each) at a river outpost. Ysolde has a tier-3 injury; Brannock needs a new tool kit. The event is d12 = 9: the outpost is short-handed (*Short-Handed*). They choose Ordinary upkeep (1 tick). Ysolde takes Recuperate (Light): routine care, no roll, and the injury is marked *treated* (tier 3 to tier 2). She does nothing Strenuous, so her healing interval continues. Brannock starts an 8-segment kit project; he and Ysolde pool 2 Checks for a shared Make and Mend push. Brannock rolls Craft, Ysolde Helps, and 3 Power Advances 3 segments. At the close the clock keeps its progress, and each player writes a Goal.

Module E — Factions, Standing & Obligations

Organizations have ambitions, resources, loyalties, and limits. This module connects their struggles to the party's adventures: factions provide opportunities and assistance; the party's actions determine what those factions can accomplish.

Use this module when alliances, patronage, collective action, or political consequences matter. It is optional and remains setting-neutral. These rules are a playtest draft, not tested balance claims.

When enabled, this module replaces the faction action procedure in Module C.5. Retain the rest of Module C. Use the core rules for PC checks, Effects, Truths, clocks, and conflicts except where an explicit organizational exception appears below.

E.1 Faction Records

A faction is an organized group pursuing a shared purpose: a household, village council, guild, temple, company of soldiers, criminal network, or administration.

Record:

- Name, purpose, and long-term ambition.
- Operational reach: the places and communities where it can act.
- Five Qualities, each rated 0 to +4.
- Two or three assets and one vulnerability.
- Standing toward the party, from −3 to +3.
- A representative who can explain or authorize requests.
- One current project and its clock.
- An important ally and rival, where relevant.
- Outstanding favors, obligations, offices, and personal exceptions.

Prepare full records only for active factions. A name, purpose, and Standing suffice for a background group. Begin with three active factions; normally track no more than five at once.

The party may found or lead a faction. Give it ratings justified by its actual people and resources; do not purchase a second character sheet with personal pool points. Leadership grants only the authority its governing structure recognizes.

E.1A Building the Starting Cluster (Long Knives)

Use this when starting a campaign, after the C.7 story map is drawn. It produces the first faction records (E.1), their starting Standing, and the opening situation. It takes about 30 to 45 minutes.

Size. Aim for four factions: three active (full records) and one background (name, purpose and Standing). E.1 recommends starting with three active factions and tracking no more than five.

1. Place. Name the location. Record it as the first Region Truth (C.1).
2. Gather. List the groups the PCs' lines point to: Organizations from the map, plus fragments of them. Note what each wants in the area and who would oppose it.
3. Cluster. Pick four groups that would find one another aggravating. Law, a local lord or an imperial office often belong even if no PC touches them.
4. Record. Fill in each active faction's record (E.1) using the table.

Long Knives field	Becomes	How
Has	Qualities, assets, vulnerability (E.1, E.2)	The *obvious* asset sets the faction's highest Quality (+3, or +4 for a dominant power). The *less obvious* asset sets a second Quality (+2). Other Qualities are 0 or +1. Explain every nonzero Quality through concrete assets. The vulnerability is something opponents can target; it need not match a low Quality.
Wants	Ambition, project, primary Quality, clock (E.1, E.10)	Write the long-term ambition, then one current project with its intended outcome and its primary Quality. Choose the clock by the change it makes: 4 or 6 for a limited or local action, 8 for a Site Truth, 12 for a Region Truth (E.10, C.6).
Link	Standing and representative (E.3, E.4)	Set starting Standing (below). Name a representative. Record membership, patronage and favor lines from the C.7 map (E.4, E.7).
Relations	Ally and rival (E.1)	Name one important ally and one rival for each active faction where relevant.

Starting Standing. Set it from the C.7 map:

- A PC is a sworn member, or the faction is their patron: +1 or +2, with a personal exception if that PC differs from the party (E.4).
- A PC is the faction's rival, debtor or target: −1 or −2.
- No line: 0.
- Reserve ±3 for blood feuds and binding oaths. Where Standing is not 0 and the relationship matters, record the relationship Truth (E.3).

Qualities and Cohesion. A local faction normally has about 5 to 8 points across its Qualities, and a regional power about 9 to 12 (the Reed Quay Association in E.13 totals 9). A Quality of 0 means the faction can't independently mount a major action in that field (E.2). Don't start a faction with permanent Cohesion 0 unless you want it to begin in a Fracture crisis (E.12).

5. Incident. One active faction takes an underhanded or aggressive action that affects the others. Treat it as a completed project: its clock is full and can't be unticked (E.10). Record the result as scoped Truths with rank and removal condition (E.8, E.10). If it was an exceptional commitment, mark Strain on its primary Quality (E.9). The PCs may see the incident but can't prevent it.
6. Reaction. Each active faction declares its first-turn action: project action, primary Quality, intended outcome and any exceptional commitment (E.10). A faction with a credible method may obstruct another faction's *uncompleted* project instead (E.10). The incident's result can only be reversed by a new undertaking.
7. Future. For every active project, write its intended outcome and the scoped Truth it creates if the PCs do nothing (E.8). Use the pacing table to say roughly when. Make at least one visible to the players, and bad enough that they will want to act.
8. Involvement. For each PC with a line into the cluster, write one hook as an undertaking with a foreseeable strategic effect (E.8): which project it advances or obstructs through the Advance effect, and the likely change in Standing (E.3). Leave discoverable signs of secret projects (E.10). A played scene replaces the equivalent off-screen work, not the faction's other activity (E.10).
9. First turn. Take the first World Turn only after play begins. Don't ask for a faction roll to confirm what the party already accomplished (E.8). Off-screen actions use no Momentum, pools, Tychē or Woe (E.10).

Pacing (playtest). Average Power per World Turn for 2d12 + one Quality against Standard 15, before doubles and opposition. Overflow is discarded, so real times run a little longer.

Quality	Average Power per turn	Turns to fill 8	Turns to fill 12
0	0.65	about 12	about 18
+1	0.83	about 10	about 14
+2	1.04	about 8	about 12
+3	1.27	about 6	about 9
+4	1.52	about 5	about 8

E.2 Organizational Qualities

Quality	Measures
Might	Organized force, military readiness, and coercive capacity.
Treasure	Accessible wealth, credit, and financial organization.
Influence	Information networks and ability to shape outside decisions.
Territory	Productive infrastructure, population, holdings, transport, and logistical reach.
Cohesion	Internal loyalty, legitimacy, discipline, and shared identity.

Rating	Capability
0	No independent organized capability in this field.
+1	Limited.
+2	Established.
+3	Strong.
+4	Exceptional.

Qualities measure capability, not fixed population or geographical size. A small veteran force can have strong Might. A mobile caravan can have Territory through its vehicles, workforce, and supply arrangements.

Explain every nonzero rating through concrete assets. Influence +3 might mean couriers, shipping agents, and sympathetic officials. It does not mean the faction knows every secret.

A Quality of 0 does not prohibit its members from acting as individuals. It means the organization cannot independently mount a major action in that field without establishing the missing capability or securing outside support.

A permanent Cohesion of 0 is a *crisis* when a faction has fallen to it (E.12). A faction built at Cohesion 0 begins with its Fracture clock created and no automatic tick that turn.

Assets and reach

Assets determine what the faction can actually do. A treasury cannot occupy a town without personnel; soldiers cannot cross a sea without transport. A rating never creates an unstated army, fleet, office, or network.

When an asset matters mechanically, record a Truth with scope, rank, and removal condition. Use its concrete additional advantage, not a second bonus merely restating the Quality. Might already includes the ordinary readiness of the force that justifies its rating.

Record a distant branch separately when local capabilities matter. The imperial institution's full resources are not automatically available to every provincial official.

Changing Qualities

Change a permanent rating only after a lasting change to the capacity it represents. Losing one shipment normally changes an asset, creates Strain, or sets back a project. Losing the principal treasury and credit network may reduce Treasure.

An improvement normally requires an appropriate 8- or 12-segment project, a concrete new resource, and an outcome large enough to justify the next rating. Repetitive minor jobs cannot manufacture permanent growth. No Quality exceeds +4.

E.3 Standing

Standing measures the faction's normal policy toward the party, not the feelings of every member.

Score	Relationship	Normal treatment
−3	Enemy	Actively seeks the party's capture, expulsion, destruction, or lasting defeat.
−2	Hostile	Obstructs the party and supports credible action against its interests.

Score	Relationship	Normal treatment
−1	Distrustful	Demands safeguards, compensation, or supervision.
0	Uncommitted	Judges requests on their immediate merits.
+1	Welcoming	Offers ordinary hospitality, introductions, and opportunities.
+2	Trusted	Shares sensitive information and considers meaningful assistance.
+3	Allied	Treats the party's welfare as an organizational interest within agreed limits.

Standing is not membership, command, fear, or internal unity. A faction may be cohesive and hate the party, or welcome the party while suffering mutiny. A feared enemy can comply with a threat without becoming friendly.

Relationship Truths

When identity is known and the relationship materially affects cooperation, access, or credibility, use one relationship Truth:

Standing	Truth	Rank
−3 / −2	Enemies of the Faction / Hostile Reception	2 adverse
−1	Distrusted by the Faction	1 adverse
0	None	—
+1	Welcome Among the Faction	1 helpful
+2 / +3	Trusted by the Faction / Bound by Alliance	2 helpful

Each relevant rank shifts Difficulty one step (3 points), following Core Rules §8. Helpful and adverse Truths cancel normally; the net shift remains capped at three steps. Relationship Truths do not automatically modify combat, technical work, stealth, or deception.

Scope: recognized dealings with this faction where the relationship affects the request. Removal: replace the Truth when Standing changes or the relevant relationship ends. A personal exception replaces this Truth for its subject; it never stacks with it.

Trust does not compel obedience. Even an ally may refuse something beyond its means, authority, commitments, or capacity to survive. Ordinary assistance already willingly available needs no roll.

Changing Standing

Change Standing for consequential deeds the faction learns about and attributes to the party:

- +1: complete important work, protect a valued asset, uphold a difficult agreement, or make a meaningful sacrifice.
- +2: avert an organizational catastrophe or deliver a transformative victory.
- −1: cause significant avoidable loss, break a meaningful agreement, or seriously undermine the faction.
- −2: betray it, destroy an irreplaceable asset, or deliberately deliver it into an enemy's hands.

Apply changes once per undertaking, normally at its conclusion or when the consequences become known. Usually apply a net change of at most one step per faction per adventure; reserve two steps for decisive events. Clamp Standing between −3 and +3.

Paid work may demonstrate reliability. Honest failure is not betrayal. Declining an ordinary job is not an automatic penalty. Trivial gifts and repeated errands do not improve Standing indefinitely.

Secret deeds create no immediate public change. Record pending exposure when necessary. False accusations may change treatment; record the accusation as a Truth so disproving it offers a route to repair.

Helping one faction does not automatically offend every rival. Change another faction's Standing only when its interests were meaningfully affected and it knows whom to credit or blame.

E.4 Personal Exceptions and Authority

Use party Standing by default. Record an individual exception only when a particular relationship matters: an estranged child of the leader, a sworn member, an acknowledged oathbreaker, or someone who saved a representative's life.

Give the character an effective Standing for that relationship when needed. Party +1 and a character's temple exception −2 means the temple normally welcomes the group but treats that character as hostile in relevant dealings.

An exception applies to its subject, not automatically to everyone standing beside them. A trusted member can arrange an audience for companions without making them trusted members. Personal deeds change the exception unless the faction reasonably holds the whole party responsible.

Membership and office

Record membership, commissions, and offices as scoped Truths, not another numerical Influence track. Examples include Sworn Member, Commissioned Envoy, Licensed Supplier, and Captain of the Northern Watch.

State the permissions, jurisdiction, duration, duties, and removal conditions. Authority requires appointment, election, sponsorship, initiation, or another established process. Standing may open that opportunity; it does not replace it.

A legitimate seal may make access possible. It does not substitute Standing or a faction Quality for Persuade or another PC Skill.

Patronage

Record what a patron supplies, the service expected, what lies outside the arrangement, and what ends it. Routine agreed service is not a new favor each time. Refusal matters according to the actual agreement, not an unlimited claim on the character.

E.5 Seeking Aid

1. State the assistance, timing, location, authorizing representative, burden, and offered compensation.
2. Check capability, reach, available assets, and the representative's authority.

3. Grant willing, available, inconsequential assistance without a roll.
4. Use a single core check for limited uncertainty; use an Argument or Negotiation conflict when the core conflict criteria are met.
5. If the request is impossible now, explain what would have to change.

For a single request check, establish burden before applying relationship and other Truths:

Base Difficulty	Burden
Easy 12	Minor inconvenience or readily available assistance.
Standard 15	Meaningful expense, limited exposure, or diverted personnel.
Hard 18	Serious expense, danger, secrecy, or political embarrassment.
Formidable 21	A major commitment threatening an important interest.
Heroic 24	An extraordinary but still possible commitment.

PCs roll normal Skills. Pools pay for Effort and Resistance; do not add a pool as an attribute. Persuade, Deceive, and Intimidate reflect different methods and consequences. Evidence, compensation, leverage, and timing can change the request's feasibility or relevant Truths.

Use normal core outcomes, Power, doubles, and currencies. A Success at a Cost grants the agreed help with the normal consequence-or-Woe choice. Failure does not secure the help and produces an appropriate move. A failed request cannot be repeated unchanged: introduce materially new terms or circumstances.

Extra Power can improve agreed scope, speed, or discretion where normal Effects and the fiction support it. It cannot buy permanent Standing or unlimited resources.

E.6 Faction Support in Party Scenes

A Quality establishes what support the faction can organize; Standing, authority, and obligations govern whether it is provided. No faction Quality is added directly to a PC roll.

Support has one concrete application:

- Permission: equipment, credentials, transport, or access makes the action possible, or removes the need for a particular roll.
- A scoped Truth: actual conditions change Difficulty under Core Rules §8.
- Active Help: a participating ally uses the core Help procedure, pays its normal cost, and shares the risk. A faction's accompanying NPC pays the Help cost from its own pools if it is built with them. An ordinary NPC has no pools and cannot Help (§6.1); an ally who can is a named NPC built with pools. Qualities are not personal pools.

Do not award all three for the same contribution. Stronger Qualities increase feasible reach, reliability, and scale, not an automatic numerical bonus. Might +4 can organize support beyond Might +1; it does not grant +4 Fight.

An escort may make a friendly checkpoint automatic. It cannot make every later negotiation easier simply because it exists. Personnel face the real risks of deployment, and a borrowed resource is not freely duplicable or permanently transferred.

E.7 Favors and Obligations

A favor is a specific acknowledged promise. An obligation is the same record from the debtor's side. Record debtor, creditor, service, limits, notice, deadline or duration, and what settles it. Record who can call it in and whether it benefits the party or a named individual.

Agree to scope when the promise is made. "You owe us something" is an unresolved negotiation, not a blank cheque. Favors can be payment for work, part of an alliance, or compensation for aid.

Calling in a feasible, acknowledged favor within its terms requires no request check. Roll only for a separate uncertainty: evading inspection, locating a vessel, or reaching a destination. Broader or newly dangerous work may require renegotiation; establish whether the changed circumstances fall within the original agreement before rolling.

Possible settlements include fulfillment, an accepted substitute, partial settlement, or an agreed delay. Genuine inability is not automatically betrayal, though concealment or indifference may damage trust.

Knowingly refusing a feasible agreed obligation normally costs one Standing; severe betrayal may cost two. Owing a favor does not remove a player's control over their character. State the consequences and let them choose.

Calling in an earned favor does not reduce Standing. Repaying one does not automatically improve it. Falling Standing does not erase outstanding promises. A favor transfers only with the debtor's consent.

E.8 Adventures and Strategic Advantages

Before an undertaking, explain its likely strategic effect when the characters can reasonably foresee it. "Secure the bridge and our forces can cross this turn with a rank-1 advantage" gives the players a meaningful choice.

Successful adventures may:

- Accomplish an objective outright.
- Advance or obstruct a project through the Advance effect.
- Establish a scoped Truth for a later faction action.

Examples: Enemy Deployment Exposed; Crossing Secured; Troops Paid Before the Muster; Reformers Have Public Support; Southern Squadron Will Not Intervene.

Record scope, rank, duration, and removal condition. Rank 1 is normal; rank 2 requires a decisive advantage. One-use preparation applies to the next relevant action and then expires;

persistent advantages endure only as long as their established circumstances do. Apply the core Truth cap.

A roll does not automatically create a lasting Truth merely because it succeeds: use the appropriate core Effect or establish it as the agreed outcome of the completed undertaking. Larger lasting changes need the appropriate project or milestone, as in Module C.6.

Do not require a faction roll to confirm what the party already accomplished. Capturing a bridge does not lead to another roll to see whether it was captured. A separate roll may determine whether the army exploits that opportunity.

Distinct consequences can follow one achievement, but never award duplicate progress or duplicate modifiers for the same work. One bad PC roll does not automatically damage a whole faction; consequences must reach its people or resources.

One contribution. If a PC endeavour does the work a faction's project action would do (the party sabotages the project itself), that endeavour replaces the faction's own roll for that project this turn. Never count both for the same work.

E.9 Commitments and Strain

A faction normally takes one major project action per World Turn without automatic Strain. Exceptional deployment can exhaust a capability.

Mark one relevant Quality as Strained when the faction takes an additional major action, makes an exceptional deployment to support the party, overextends to meet a deadline, or suffers an explicit exhaustion consequence. Ordinary hospitality, meals, and introductions do not qualify.

A Strained Quality operates one rating lower, minimum 0. Strain does not stack on that Quality and is not also an adverse Truth for the same exhaustion. A faction can take at most one additional major action per turn; declare it and mark Strain before resolving that additional action. It must strain the primary Quality of that action, which must not already be Strained. Thus additional actions cannot be repeated indefinitely.

Timing. Strain from an additional or exceptional action is marked when the action is *declared* (E.10, step 2), so that action and every other action that phase use the lowered rating.

Clear Strain after one full World Turn in which the affected capability is not used for a major action or exceptional commitment, provided recovery remains plausible. Ordinary background activity does not prevent recovery. Strain alone reducing effective Cohesion to 0 does not trigger Fracture; use permanent Cohesion for E.12.

Exhaustion is not destruction. Rest can recover tired guards; it cannot rebuild a burned warehouse. Track persistent losses separately.

E.10 World Turns

Choose one cadence: each in-world week, between adventures, or another agreed meaningful interval. Do not take extra turns simply because a session ended. This procedure replaces Module C.5 while Module E is enabled.

With Module D. The cadence is between adventures: one World Turn per stay. Strain (E.9), Fracture clocks (E.12) and project clocks count in World Turns. A long stay doesn't recover Strain faster, and a short one doesn't skip it.

1. Resolve known consequences of recent play; update Standing, obligations, assets, and exceptions.
2. Declare each active faction's project action, primary Quality, intended outcome, and any exceptional commitment.
3. Resolve actions and opposition. Use ratings at the start of the action phase; apply resulting permanent changes after all declared actions resolve. This prevents turn order from erasing a declared action without warning.
4. Resolve completed clocks, crises, and eligible Strain recovery.
5. Reveal observable developments through news, witnesses, altered conditions, or encounters. Secret projects need not reveal their details, but consequential changes should leave discoverable signs.

Organizational resolution

Roll 2d12 + the relevant effective Quality against Standard 15, adjusted by task difficulty and relevant Truths. Use one primary Quality, not the sum of two. Other capabilities may be prerequisites or provide distinct concrete circumstances; their ratings are not automatic extra modifiers.

- Success: 1 Power, plus 1 per full 3 points over the target.
- Success at a Cost (miss by 1–3): 1 Power and a concrete setback appropriate to the action.
- Failure (miss by 4+): no progress; introduce a relevant setback.
- Doubles follow the core's success/cost/failure twist rules, including double 12s and double 1s.

Organizational exception: off-screen faction actions do not gain or spend the party's Momentum, PC pools, or Tychē Points, and do not generate or spend Woe. Uncommitted Power is discarded. Resolve twists narratively; there is no off-screen Woe buy-off. PC scenes retain all normal core currencies.

Project clocks

Segments	Typical scope
4	Limited local action with few obstacles.
6	Substantial operation or contested local objective.
8	Complex undertaking or lasting institutional change.
12	Major regional transformation.

Commit Power at one segment per Power. A single faction action advances one declared project or produces one limited immediate result; it cannot purchase unrelated outcomes. Cap progress at the remaining segments; discard overflow. Link clocks for wider ambitions.

Use Module C.6 for lasting Site, Region, and Campaign changes: normally 8 segments for a Site Truth, 12 for a Region

Truth, and a major arc for a Campaign Truth. A short operational clock does not bypass those requirements.

Opposition and disruption

A faction may spend its action obstructing a known project if it has a credible method. Roll its relevant Quality against Standard 15, adjusted by the target's concrete defenses and other Truths. The target's Quality rating is not automatically a Difficulty shift.

On success, spend Power to remove uncompleted progress, one segment per Power. Remove no more than is present and discard excess. A defending faction may devote its own action to countermeasures, producing appropriate protection or removing the obstructing capability. Do not add a free reaction roll for every attempted disruption.

Declare obstruction or countermeasures in step 2 as the faction's one major action. A faction that defends does not also advance its own project.

Apply all same-turn progress and disruption to a clock together before checking completion. A clock that completes cannot later be "unticked": reversing its established result needs a new undertaking.

If two clocks with contradictory result Truths complete in the same turn, neither result is established as written: the GM and players agree on a compromise Truth, and both factions are Strained.

PCs can use Advance to remove progress when sabotage or delay directly supports that effect. Establish the affected project before the roll. A played scene replaces the equivalent off-screen work, not the whole faction's unrelated activity.

Completion

A project grants its declared result, not every benefit the victor might want. Create, remove, or change a Truth when appropriate; record scope, rank, and removal condition. Completion does not automatically make a Truth rank 2 or increase a Quality.

E.11 Conflict, Objectives, and Pressure

Use core Argument, Negotiation, or Battle conflicts when the action deserves a played conflict. Use normal core Disposition, scripting, Power, concessions, and compromise.

Standing grants no automatic Superiority. Insider intelligence, an arranged audience, or a secured guarantee can qualify as actual preparation under the core's categories and cap. Evaluate distinct advantages, not labels. Combat receives no direct Standing modifier.

State strategic objectives separately:

- Raid: take or destroy specified resources.
- Occupy: hold a particular place.
- Break resistance: disable a specified fighting force.
- Humiliate: undermine prestige before a relevant audience.
- Annex: establish lasting control over a holding.
- Reconcile: restore cooperation between internal groups.

Winning a battle does not automatically create stable government. Occupation may open a separate integration project and establish Population Rejects the Occupation. One conflict does not grant unrelated spoils or objectives beyond its stakes and compromise.

Woe in faction scenes

Use Woe normally during PC scenes to introduce supported complications, reinforcements, or danger-clock progress. Hostility is a motive, not an unlimited Woe source. A completed World Turn project establishes its result without an extra Woe payment; a new scene complication uses the normal rules. Never charge twice for the same event.

Woe cannot directly buy a Standing reduction. It can expose evidence or create circumstances that cause one. Momentum and scene-scale Create effects likewise cannot buy permanent reputation.

E.12 Damage, Crisis, and Reorganization

Target the capability actually harmed. Destroying payroll may damage Treasure; exposing agents may damage Influence; losing an estate may damage Territory; defeat may damage Might; betrayal may provoke a Cohesion crisis.

Use an asset loss, setback, adverse Truth, or Strain for limited harm. Permanent rating loss requires a lasting reduction in organizational capacity, established by the stakes or a completed undertaking. Do not subtract a rating point merely for losing any roll.

Fracture

When permanent Cohesion reaches 0, establish an internal crisis and start a 4-segment Fracture clock. Advance it once at the end of each subsequent World Turn that ends with permanent Cohesion still 0. A newly created clock does not receive this automatic tick in its creation turn. Explicit consequences may advance it further.

Restoring permanent Cohesion stops automatic progress but does not erase existing fractures. Reconciliation or another concrete undertaking removes progress. When the clock fills, the faction splits, disbands, loses central authority, or transforms according to the established situation. Its people and assets do not simply vanish.

Branches, alliances, and mergers

Separate a local branch when its resources or loyalties differ materially. Do not use a resource twice as if parent and branch had independent copies. An alliance provides agreed access and obligations, not summed ratings.

A merger is a reorganization project. Reassess Qualities from the actual combined capacity once integration occurs; do not automatically add ratings or increase matched scores. Hostile absorption may bring assets while reducing Cohesion or creating adverse Truths. Defeating a smaller organization can grant a useful asset without increasing a rating.

E.13 Example: Reed Quay Association

An illustrative faction, not setting canon.

Field	Record
Purpose	Protect river trade and control profitable landing places.
Reach	Lower river settlements and commercial offices in the provincial capital.
Might +1	Dock guards and armed crews.
Treasure +3	Freight income and commercial credit.
Influence +2	Agents, weighmasters, and clerks.
Territory +2	Barges, warehouses, and landing rights.
Cohesion +1	Members cooperate primarily for profit.
Standing +2	Trusted; Nera, master of the eastern landing, represents the association.
Vulnerability	Its principal charter is legally disputed.
Project	Secure Exclusive Ferry Rights, 8 segments: a lasting local institutional change.
Favor	Conceal up to six people aboard one outbound barge this season, with a day's notice; no declared contraband.

The party requests public freight records. Nera willingly supplies them; no roll is needed. Access to sealed judicial records is a different request, possibly requiring an introduction or commission.

The association funds a lawful journey and provides a commercial introduction. Passage permits the journey; the introduction grants an audience. Neither grants +3 Persuade because Treasure is +3.

The party retrieves admissible evidence that a rival obtained a charter through bribery. As the agreed outcome of the undertaking, Rival Charter Under Legal Challenge becomes a rank-1 Truth for the ferry-rights project until the challenge is adjudicated. If the party obtains a final judgment itself, do not roll again to establish that judgment.

On the World Turn, the association uses Influence +2. The evidence lowers the Standard 15 target to Easy 12. Dice of 7 and 9 total 16; +2 gives 18, producing 3 Power. It commits three segments. Without the evidence, the same total against 15 would produce 2 Power.

Later, the party saves the winter grain convoy at substantial personal risk. Once the association learns what happened, Standing may rise to +3. A new favor is not automatic: the association must explicitly promise one.

If the association undertakes an additional urgent funding action that turn, Treasure becomes Strained before that action and operates at +2. It cannot take a third major action. Recovery needs a later full turn without a major Treasure commitment and with plausible access to its credit network.

E.14 Table Reference

Question	Rule
What can it do?	Qualities, assets, and operational reach.
Will it help us?	Standing, authority, commitments, and reasonable requests.
What do PCs roll?	Their normal Skill; never add a faction Quality.
What does support do?	Permission, a scoped Truth, or actual Help; no duplicate benefit.
What does the faction roll?	2d12 + one effective Quality, normally vs. Standard 15.
How does it progress?	1 Power per project segment; no off-screen Momentum or Woe.
How do adventures matter?	Achieve an objective, affect progress, or establish a strategic advantage.
How often does it act?	One major action each World Turn; at most one additional action causing Strain.
What is owed?	A written favor or obligation with scope, limits, and settlement.
What causes collapse?	Permanent Cohesion 0 opens a Fracture crisis, not instant disappearance.

For a faction record, copy E.1 and leave space for five ratings, five Strain marks, Standing, personal exceptions, one project clock, and outstanding promises. Keep rating explanations concrete and show the players changes their characters can observe.

Module F: Inquiry & Revelation

Use this module when a mystery is the point of the game: a murder, a vanished caravan, a forbidden text, a buried ruin. It separates finding from understanding. Finding the clue is never the challenge. Reading it correctly is.

The module changes nothing outside Inquiry scenes. Conflicts, travel, Resistance, Momentum and Woe all work as written.

F.1 The Core Rule

> *If a scene holds a core clue, and a character has a fitting skill rated +1 or higher, that character finds it. No roll. No cost. No failure.*

- Core clue. A fact the group needs to reach the next scene or to understand the Truth of the case. Every Inquiry scene has at least one.
- Fitting skill. Any skill from the setting's skill list that the GM can reasonably tie to the clue. Several skills can reach the same clue by different routes.
- Description. The player says what the character does and which skill it uses, or the GM offers the clue unprompted to a character who clearly has it.
- Stuck groups. If nobody has a fitting skill, the clue floats (§F.6) to another source. A core clue is never locked behind a missing skill.

F.2 Insight: The Extra Layer

A core clue gets you to the next scene. Insight is everything beyond that: motive, timing, who else was involved, what the culprit will do next, a shortcut, an ally. Insight is optional, and you can gain it in two ways.

Method	How it works
Probe	Roll 2d12 + the skill vs. a Difficulty set by the GM (usually Standard 15). Each Power you spend on Discover (Core Rules §5) is one Insight. The usual outcomes apply: a miss by 1–3 is a Success at a Cost, and a miss by 4+ is a Failure that gives the GM 1 Woe. A failed Probe never removes a core clue.
Buy	Spend 4 − Edge points (minimum 1) from the skill's pool, with no roll. You gain exactly one Insight. The pool is the one that pays for that skill in Effort and Resistance (Core Rules §3.3).

Probe is cheap but risky. Buy is safe but drains the pool you also need for Resistance and Effort. Players should have to choose between them.

WHICH POOL PAYS?

Sōma: long vigils, exhumations, hard physical labour. Mētis: meticulous search, tailing, lock and mechanism work. Psychē: deduction, records, anatomy, languages. Pneuma: reading people, rites, dread places, the uncanny. The GM may allow a different pool when the fiction supports it (Core Rules §3.3).

F.3 What an Insight Can Be

When you gain an Insight, choose one. The GM may veto a choice that does not fit the scene.

- Detail. A true fact that deepens a clue you already have. It can help you solve the case, but it is never required to reach the next scene.
- Edge. Create a Truth that fits what you learned (*the guard captain is afraid of the cellar*). It lasts for the scene, or until the case ends if the group spends an extra Power or point.
- Contact. Name an ally, informant or source, and say how you know them. The GM adds a short tag.
- Spotlight. Show real expertise in front of others. You gain a free invoke of one tag or Truth about your standing, once per scene. Use this to shine, not to win a fight.
- Foresight. The GM tells you one thing the opposition is about to do.

If no Insight fits, nothing happens and no points are lost. Buy costs are refunded.

F.4 Boosted Skills and Recovery

- Boosted skill. At creation, mark one skill you hold at +1 or higher. When you Buy an Insight with it, regain 1 point to the paying pool. Mark another skill each time you have taken 4 Advances.
- Recovery. Pools recover as usual (Core Rules §6). The GM may also offer a refresh opportunity: a night in an archive, a round of drinks in the right tavern, a meal with a scholar. Each restores 2 points to the pool that fits.
- Help. One ally may Help a Probe as normal (Core Rules §2.4), or contribute a relevant skill to a Buy. Add +1 point of discount per helper, to a minimum cost of 1.
- Tags. A power tag that applies to the skill adds +1 to a Probe, as usual. Burning one gives +1 Power.

F.5 Danger and the Clock

Inquiry has no failure state, so it needs pressure from somewhere else. Pressure comes from the opposition, not from missed rolls.

- Woe pays for Reaction. When a Probe fails, or when the group lingers, the GM gains Woe as normal. The GM may spend Woe on an Antagonist Reaction: the culprit destroys evidence, a witness vanishes, a patron grows impatient, an ambush is arranged.

- The case clock. Start a 6-segment clock (Core Rules §7) called *They Know We Know*. Tick it when the group makes noise, takes a long time, or when a Probe fails by 4+. When it fills, the opposition acts decisively.
- Danger is a separate scene. A scene either asks "what do we learn?" (Inquiry) or "what do we survive?" (Conflict, Hazard). A scene that is both is two scenes: finish one, then start the other.
- Clues never depend on winning a fight. Winning may give Insight, but a core clue must be reachable even if the group loses, flees or is captured.

F.6 Building a Case

Work backward from the Truth, then forward through scenes.

1. The Truth. Write one paragraph: who, what, why, and how it was done.
2. The Hook. Tie it to a Belief, Goal or Instinct of at least one PC.
3. The Twist. Something that widens or changes the case halfway through.
4. The Conclusion. A confrontation, a choice, or a public accusation. Core clues bring the group here, but the players decide what to do with what they know.
5. The scenes. Link them with clues, as below.

Clue type	Use
Core clue	Points to a scene or to the Truth. Always found, never rolled for.
Lead-in	A clue that points *to* a scene. Give every scene at least two lead-ins from different scenes, so the case is a web and not a line.
Floating clue	The GM places it wherever the group looks first. Use it for the clue the case cannot do without.
Leveraged clue	Available only once the group holds another clue. Example: a suspect clams up until you confront them with the ledger.
Pipe clue	A detail that seems like colour now and pays off later.
Red herring	True, interesting and misleading. Never a lie told by the narrator. Give each one a source and a reason.

Scene types: Introduction, Core (holds core clues), Alternate (another route to a clue), Subplot, Action (Conflict or Hazard), Reaction (the opposition responds) and Conclusion.

F.7 Running Inquiry

- Cover the skills. Build an Investigator Matrix, a table of the party's skills against the case's scenes. Give each PC a scene where their skills matter most.
- Be generous. Give information freely. Let players chase red herrings. Give minor NPCs a past and a want.
- Core clues lead to the end, not through it. Following them only gets the party to the last scene. Insight and good reasoning decide whether they arrive prepared.
- Listen and improvise. When players theorise, borrow their best ideas, provided they do not contradict a core clue or the Truth.
- Share the world. A good Insight lets the player describe the contact, the rumour or the detail, within the Truths already established.
- Prompt early. For the first session or two, remind players what their skills can do.

F.8 Weird Methods

Oracles, divinations, scrying, speaking to the dead and similar methods are tools that produce clues, not answers. An Arcana-style skill finds core clues like any other. The result is a true but partial, symbolic or conditional reading. Use Pneuma for the Buy or Probe. Opponents who expect scrying can block it, mislead it, or leave a false trail with their own working. Let the setting decide whether such evidence counts as proof.

QUICK REFERENCE

Core clue: fitting skill (+1 or higher) → found, free.
Probe: 2d12 + skill vs. Standard 15; each Power on Discover = 1 Insight.
Buy: 4 − Edge (minimum 1) from the skill's pool = 1 Insight, no roll.
Boosted skill: Buy with it → regain 1 point.
Case clock: 6 segments; tick on noise, delay, or a Probe failed by 4+.
Danger: a separate scene; clues never depend on winning.

CHAPTER IV

Adversaries

Build opposition on an index card, budget the fight, script it, and run it through the conflict system. Terse reference for the GM.

Every adversary has one thing it is clearly best at. Show the table the Tell.

IN THIS CHAPTER

1. Principles 44
2. The Card 44
3. Building an Adversary 44
4. Kind Packages 46
5. Encounter Budget 47
6. Running Adversaries 48
7. Templates 49
8. Quick Checklist 50

1. Principles

- No pools. Adversaries do not track Sōma, Mētis, Psychē or Pneuma. Grit contributes to their side's starting shared Disposition; it is not a personal track. Shrugs are free Resists.
- Tags are already counted. Ratings include tags. PCs still Discover, Burn and compel them.
- Woe is fuel. Adversaries buy bonus dice (1 Woe each, max +2) and fire Specials with Woe. They never use Effort.
- One best action. Every card has one clearly best action and a Tell that hints at it. Give the players something to script around.
- Index-card size. If it does not fit on a card, cut it.

2. The Card

```
NAME — Kind · Rank · Role                                  Threat N
Grit N · Guard +N · Shrugs N · Armour N
Attack +N · Defend +N · Feint +N · Maneuver +N · Other +N
Harm: status (source)
Power tags: … · Weakness tags: …
Kind: traits from the Kind package
Role: role trait
Specials: Name (Woe cost): effect
Tell: the visible sign before it uses its Best action
Wants: what it is after in this scene
```

Field	Meaning
Grit	The adversary's contribution to its side's starting shared Disposition. Add up Grit across a side; adversary sides do not roll for Disposition. Do not track or deplete individual Grit shares.
Guard	Added to Standard 15 when a PC's independent roll targets this adversary.
Shrugs	Free Resists per scene; each cuts an incoming status by 2 tiers. Extra Shrugs cost 1 Woe.
Armour	−1 tier of physical harm per point.
Ratings	Bonus on each conflict action. Other covers rolls outside a conflict.
Harm	Status inflicted by a successful Attack outside a conflict. Tiers equal Power.
Threat	Its cost against the encounter budget. Always equals Grit.

3. Building an Adversary

Step 1 — Concept and Kind

One line: who it is and what it wants. Pick a Kind: Vampire, Human, Beast or Guardian (§4).

Step 2 — Rank

Rank is how dangerous it is *now*. It sets every number.

Rank	Grit = Threat	Best / Fair / Weak	Guard	Shrugs	Tags: power / weakness	Specials
Minion group (3–6 Bodies)	3	+4 / +2 / +0	+0	Bodies	2 / 1	1 group trait
Minor	3	+5 / +3 / +1	+0	0	2 / 1 (vampire 3 / 1)	1
Established	5	+6 / +4 / +2	+1	1	3 / 1 (vampire 4 / 1)	2
Great	8	+8 / +5 / +3	+2	2	4 / 2 (vampire 5 / 2)	3
Paramount	12	+10 / +7 / +4	+3	3	5 / 2	4

Vampire Grit already includes the Threat Rank Disposition bonus (+0 / +2 / +4 / +6). Do not add it again.

Tiers. Minion groups are the mob. Minor and Established are rivals. Great and Paramount are bosses.

A starting PC's best roll is +6. With one bonus die, that PC wins a versus roll about this often against an adversary that rolls no bonus dice:

Adversary rating	+2	+4	+6	+8	+10
PC win chance	85%	77%	67%	56%	about 45%

Each Woe die you add moves the odds back toward the adversary.

Step 3 — Role

The Role names the Best action and gives one trait. Assign Fair to two other actions and Weak to the last. A Beast or simple machine has no Feint: it gets Best, Fair, Fair.

Role	Best	Role trait
Brute	Attack	Heavy Hitter. First successful Attack each exchange gets +1 Power. Resolve area effects under Core Rules §10.16; do not multiply this bonus across shared Disposition. Outside conflicts, its Harm is +1 tier.
Shooter	Attack	Dead Aim. Free bonus die on its first Attack each scene.
Bulwark	Defend	Interpose. Once per exchange, it may intercept an ally's imposed status before Resistance or harm reduction, using its own normal reduction instead. No shared Disposition loss is redirected. Outside conflicts, it may likewise intercept fitting harm without a separate frequency limit. Follow the full timing, exclusions and area restrictions in Core Rules §10.17.
Skirmisher	Maneuver	Hit and Run. A successful Maneuver also removes 1 Disposition from the opponent.
Controller	Maneuver	Shape the Ground. Once per scene, Create a Truth for 1 Woe (not 2) or for 1 Power from a Maneuver.
Trickster	Feint	Ambush. If the PCs have not noticed it when the conflict begins, its side starts with +2 Disposition.
Leader	Defend or Maneuver	Command. While it has Disposition, minion groups on its side get +1 to all ratings, and changing its side's script costs 2 Woe (not 3).

Step 4 — Tags

Write as many as the Rank allows.

- Power tags explain the Best action: faster than you can see, old-world steel, a hundred donors.
- Weakness tags are levers PCs can find with Discover: proud beyond reason, fears fire, fixed in place.
- Burning a power tag (Weaken 1, Disarm 3, Called Shot) lowers the rating it supports by 1 for the scene. If the tag powers a Special, the Special is off for the scene instead.
- Using a Discovered weakness gives the PC +1 on the roll.
- Compelling a weakness costs 1 Momentum or 1 Tychē. The adversary acts on it and the GM gains 1 Woe.

Step 5 — Specials, Harm, Tell, Wants

Pick Specials from the Kind menu up to the Rank limit. Price a new one:

Woe	What it can do
0	Always-on trait, or a once-per-scene minor trick (Armour 1, step between shadows).
1	+1 Power or a free bonus die on one roll. A tier-2 status on one target. Cancel one PC trick. One minion as reinforcement.
2	Create a Truth. A tier-3 status. Leave the scene. An area effect.
3	Changes the scene: a significant reinforcement, recover 2 tiers or 3 Disposition, a danger-clock tick plus an effect.

Area Rule (provisional for playtesting). Use Core Rules §10.16. Establish the area and everyone it can reach; there is no automatic ally/enemy selection. An area Attack or Feint removes its committed Power + 1 from shared Disposition once, plus 1 per additional opposing participant affected. No individual shares or spill-over. Explicit statuses apply at full purchased or listed tier to every affected character, with separate Resistance or NPC reduction. An ordinary conflict Attack gains no status merely for being an area effect. Apply both layers only when an explicit rule grants both. At most one participant may accept an injury trade against the combined loss of a single area Attack or Feint.

4. Kind Packages

Vampire

- Hard to Kill. Physical statuses stop at tier 5 without a killing method. Tier 5 is broken (−2 on physical rolls).
- Blood Debt. −1 to all ratings at 4 segments, −2 at 5. Being broken ticks the clock.
- Pride, Sun-Sick and killing methods all apply.
- Killing strike. A vampire side at 0 shared Disposition is defeated, not automatically wounded or destroyed. Name an eligible vampire and follow Testament of Dust, Frontier Rules §5.2, within the established lethal stakes; shared Disposition loss grants no physical status.
- Introduction Woe, paid once, the first time it appears in the campaign: Minor 1, Established 3, Great 5, Paramount 8.
- Woe Spends (Presence, Uncanny Speed, Summon the Household) are open to every vampire and do not count against Specials.

Special	Woe	Effect
Feed	1	After it wins a versus Attack in melee, add Bled-2 to that PC's compromise (Bled-2 on the hit outside conflicts). It recovers 1 tier of physical status.
Unnatural Strength	1	+1 Power on a successful Attack. Outside conflicts, +2 tiers.
Terrible Patience	1	Ignore one status or Blood Debt penalty for one roll.
Fade	2	Create the Truth Deep Shadows. It may be gone when the light returns.
Blood Price	3	Paramount only. Tick the campaign danger clock by 1 and restore 3 of its side's shared Disposition (up to the side's starting value).

Human

- Morale. Outside conflicts, a minion group or Minor flees or surrenders at half Bodies or when its leader is Taken Out, unless a Leader still stands.
- Can be talked to. Persuade, Intimidate, bribes, Argument and Negotiation all work.
- Gear is in the ratings. Write Armour separately.
- Build Great or Paramount rival hunters as full PCs.

Special	Woe	Effect
Volley	2	Group or Shooter. An area Attack.
Dirty Trick	1	Any success also Impedes the target (−3 next roll).
Call for Help	1 per minion / 3	Reinforcements arrive and add their Grit to the side.
Shadow-meld	0	Retainer clan, once per scene. Step between shadows. May swap one revealed action for a Maneuver.
Beast Form	1	Retainer clan. Attack becomes Best for the scene, and it gains the Beast package.
Hostage	2	Create the Truth "a knife at their throat." Attacks against its side are one step harder.
Last Stand	2	At 0 Disposition, it still takes its next scripted action this exchange.
Fanatic	0	Ignores Morale.

Beast

- No Feint. Ratings are Best, Fair, Fair. The missing Feint is the trade-off.
- Cannot be reasoned with. No Persuade or Argument. Intimidate and fire work. Every beast starts with a weakness such as fears fire.
- Morale as Human. Packs scatter when the pack leader falls.

Special	Woe	Effect
Pack Tactics	0	Group trait. +1 Attack if another member of its side Attacked earlier this exchange.
Pounce	1	Free bonus die on its first Attack in a scene. If it wins, it Impedes the target.
Savage Bite	1	+1 Power on a successful Attack.
Thick Hide	0	Armour 1.
Venom / Infection	2	Hit or compromise adds poisoned-2, rising 1 tier per scene until treated.
Howl	2	A minion pack (Grit 3) arrives at the end of the exchange.
Bolt	2	It leaves the scene.

Guardian

- Unfeeling. Immune to fear, Intimidate, Persuade, Duel of Wills and Pneuma statuses. No Morale; it never flees.
- Protocol. It scripts in a pattern. One Discover reveals its next exchange's script.
- Machine. The glitched status lowers all ratings by its tier. A PC with access can use Science as Attack (shutdown) or Maneuver (override).
- Simple machines have no Feint. Thinking constructs Feint normally.

Special	Woe	Effect
Suppressing Fire	2	An area Attack.
Scan	1	Cancel a Stealth-based Maneuver's effect, or reveal a hidden PC.
Self-Repair	1	Restore 2 of its side's shared Disposition (up to the side's starting value) or 2 tiers of physical status.
Lockdown	2	Create the Truth Sealed Doors.
Shock Field	1	A PC who loses a versus roll to it in melee adds jolted-2 to their compromise.
Fail-safe	3	At 0 Disposition it blows up: every PC within reach adds burned-3 to their compromise.
Calls the Works	2	Another guardian arrives.

5. Encounter Budget

Let P be the party's expected Disposition: about 8 plus party size. Spend Threat (= Grit) against it.

Difficulty	Threat budget	Extra Woe	Expect
Easy	½ P	none	PCs win without spending Tychē. Openers and calibration.
Standard	P	none	PCs should win and take a Minor or Significant compromise.
Hard	P + 3	+2	PCs win only if they play well. One bad Disposition roll can lose it.
Deadly	P + 6 or more	+4	Signpost it. Flight, bargaining or burning Tychē are real outcomes.

Party size	2	3	4	5
P	10	11	12	13

- Mix at least two Roles. A Controller with a Skirmisher pack and a Minor Brute gives players script decisions.
- Keep actors to party size + 1 or fewer. Put extra bodies into minion groups.
- Count Woe separately. Session Woe (2 per PC) plus a vampire's introduction Woe stacks fast. If the encounter already carries introduction Woe, treat Hard as Standard plus Woe.
- Disposition-cutting PC abilities (such as −2 or −3 to the opposing side) apply after the budget.
- Superiority (Know Thy Foe, Know Thy Battlefield, Know Thy Players) lowers adversary Disposition by 1 each, up to 3. Players who scout earn a cheaper fight.
- Variance warning. The PCs' own Disposition roll is the biggest swing in a fight. Adversary Grit is fixed. On a Hard fight, tell the table early if the roll came up low and offer exits.

6. Running Adversaries

6.1 Setup

1. State intent, stakes and exits for both sides (Core §10.2). State whether death is possible before any roll.
2. Add up Grit across the side: that is its starting Disposition. Apply Superiority. Ambush adds +2.
3. Set Woe: 2 per PC plus Difficulty extras plus introduction Woe.
4. Write the side's script on index cards. Minion groups share one script.

6.2 Scripting

Each exchange is three volleys. Script three actions in order.

- Every actor, minion groups included, acts once before anyone acts twice.
- Open with the strongest actor's Best action.
- Never script one action three times. Players read patterns.
- Put one Defend or Maneuver in when the side's shared Disposition is under half its starting value.
- Show the Tell on the volley before the Best action.
- If a member is out, any remaining teammate takes its scripted action as long as rotation allows. If none can, it is lost.
- Disarm on an already scripted action cancels it. The GM may pay 3 Woe to change it.

6.3 Action Results

- Attack. On a win, remove committed Power + 1 from the opposing side's shared Disposition once. An area Attack adds 1 per additional opposing participant affected (Core Rules §10.16). No status unless a Special says so.
- Defend. Each Power restores 1 of your side's shared Disposition, up to the side's starting value. It does not restore a personal Grit track or return a Taken Out participant.
- Feint. As Attack, but ignores Defend.
- Maneuver. Power buys Impede (1), Gain Position (1), Disarm (3), Create a Truth (2) or a scenery action.
- Independent rolls against an adversary use Standard 15 plus its Guard.
- Versus rolls set Power by margin: meet = 1, +1 per full 3.

6.4 Woe Economy

Gain Woe from player-bought dice, failures (+1), Escalation (+1), dangerous scene Truths (+1 per scene) and bought-off complications (+2).

Spend	Cost
Bonus die on an adversary roll	1 per die, max +2
Fire a Special	1–3
Reinforcements	1 per minion, 3 significant
Interrupt: change an unrevealed scripted action	3 (2 with a Leader)
Tick a danger clock	1 per segment
Extra Shrug	1
Scenery Danger on any scenery action	1

Spend on the Best action early. Unspent Woe at session end is wasted tension.

6.5 Reinforcements

Reinforcements add their Grit to the side's Disposition, even above the starting value. Defend cannot restore above the original start.

6.6 Minion Bodies

Minion groups have Bodies (3–6) instead of Shrugs. Each successful Attack outside a conflict drops 1 Body. Extra Power spent on Extra Feat drops another. At half Bodies or fewer, ratings drop by 1. At zero, the group is gone. Morale usually ends it sooner.

6.7 When Adversaries Win Or Lose

- Defeat. A side at 0 Disposition is defeated, not necessarily dead. Capture, flight or death follow the stakes.
- No injury trade. Ordinary adversaries and minion groups cannot use it (Core §10.13). A named rival built as a full PC can.
- Compromise. When the PCs win, the Disposition they have left sets the cost: Minor tier 2, Significant tier 3, Major tier 4. When adversaries win, they take compromise statuses too, and may Shrug them.
- Concession. Offer one before the next roll (Core §10.11), usually when the side's shared Disposition is at or below one third of its starting value. Humans accept. Beasts flee. Guardians never offer. A Boss falls back to a prepared position and starts a danger clock.

6.8 Outside Conflicts

- Passive opposition. Difficulty = 12 + the adversary's relevant rating. A Minor's Defend (Fair +3) gives 15; an Established Steward's Defend (+6) gives 18.
- Active opposition. Roll versus: 2d12 + rating.
- Harm to adversaries. Attack Power inflicts statuses as normal. Shrugs and Armour cut them down. Tier 6 is Taken Out. Vampires stop at tier 5 without a killing method.

6.9 Other Conflict Types

The same card runs any type in Core §10.4. Swap Attack, Defend, Feint and Maneuver for that type's skills and keep the ratings, Grit and Woe costs. Rename Specials to fit: Hostage becomes a leverage threat in an Argument, Lockdown a sealed network in a Hack.

7. Templates

Seven generic cards. Reskin freely. Ratings follow the Rank table.

RAIDER BAND — Threat 3

Human · Minion group (4 Bodies) · Shooter

Grit 3 · Guard +0 · Bodies 4 · Armour 0
Attack +4 · Defend +2 · Feint +0 · Maneuver +2 · Other +2
Harm: wounded (carbines)
Power: plenty of bullets, know the ground · Weakness: break and run
Kind: Morale. Role: Dead Aim.
Group trait: Volley (2): area Attack.
Tell: hats come off as rifles shoulder.
Wants: the strongbox, no heroics.

HOUND PACK — Threat 3

Beast · Minion group (5 Bodies) · Skirmisher

Grit 3 · Guard +0 · Bodies 5 · Armour 0
Attack +2 · Defend +2 · Feint — · Maneuver +4 · Other +2 (Notice +4)
Harm: wounded (bites)
Power: noses for blood, run as a pack · Weakness: fears fire
Kind: no Feint, Morale (scatter if the handler falls). Role: Hit and Run.
Group trait: Pack Tactics (0).
Tell: the circling tightens.
Wants: drive the prey toward the den.

KNIFE IN THE DARK — Threat 3

Human (retainer clan) · Minor · Trickster

Grit 3 · Guard +0 · Shrugs 0 · Armour 0
Attack +3 · Defend +1 · Feint +5 · Maneuver +3 · Other +3 (Stealth +5)
Harm: wounded (paired knives)
Power: one with the shadows, a knife for every hand · Weakness: the oath before my life
Kind: Morale. Role: Ambush.
Specials: Dirty Trick (1).
Tell: the nearest lamp gutters.
Wants: no witnesses.

BOUNTY VETERAN — Threat 5

Human · Established · Brute

Grit 5 · Guard +1 · Shrugs 1 · Armour 1 (oilskin and mail)
Attack +6 · Defend +4 · Feint +2 · Maneuver +4 · Other +4
Harm: wounded (silver-and-wood shotgun), +1 tier from Heavy Hitter
Power: silver-and-wood shot, twenty years of hunts, a name the Kept know · Weakness: greedy for the bounty
Kind: Morale; can be bargained with. Role: Heavy Hitter.
Specials: Last Stand (2), Call for Help (1 per minion: two hired guns).
Tell: he thumbs back both hammers.
Wants: the bounty, and the credit.

HEDGE ADEPT — Threat 5

Human · Established · Controller

Grit 5 · Guard +1 · Shrugs 1 · Armour 0
Attack +2 · Defend +4 · Feint +4 · Maneuver +6 · Other +4 (Lore +6)
Harm: wounded or shaken (rite)
Power: binding rites, a ledger of debts, hands that never shake, sees in the dark · Weakness: proud beyond reason
Kind: Morale. Role: Shape the Ground.
Specials: Dirty Trick (1), Hostage (2).
Tell: he straightens his cuffs.
Wants: finish the rite before dawn.

GATE WARDEN — Threat 5

Guardian · Established · Bulwark

Grit 5 · Guard +1 · Shrugs 1 · Armour 1
Attack +4 · Defend +6 · Feint +2 · Maneuver +4 · Other +4 (Science +6)
Harm: wounded (shock-baton)
Power: old-world steel, knows every corridor, obeys the bloodline · Weakness: answers to the old codes
Kind: Unfeeling, Protocol, Machine. Role: Interpose.
Specials: Self-Repair (1), Lockdown (2).
Tell: "Please remain where you are."
Wants: guests kept safe, intruders out.

THE IRON MARSHAL — Threat 8

Human · Great · Leader · Boss

Grit 8 · Guard +2 · Shrugs 2 · Armour 1 (house mail)
Attack +5 · Defend +8 · Feint +3 · Maneuver +5 · Other +5
Harm: wounded (old-world sabre)
Power: remembers the founding, a hundred sworn swords, the house is armed, never loses a flank · Weakness: proud beyond reason, believes the old stories
Kind: Morale (Fanatic in her presence). Role: Command.
Specials: Call for Help (1 per minion / 3), Hostage (2), Last Stand (2).
Tell: she sets down her glass.
Wants: the intruders alive, kneeling and useful.

7.1 Boss Phases

Phase changes are free narration with a mechanical trigger. They cost no Woe.

Threshold	Change
Start	Boss uses its Role trait and one Special. The Tell is clear.
Half Grit	Reveal a second Special. Call reinforcements for 1 Woe per minion. A Leader's minions gain +1.
One third Grit	Desperate: Best action +2, Defend drops to Weak. Offer a deal or an exit.

7.2 Example Exchange

Party of three, P = 11. Opposition: Bounty Veteran (5), Knife in the Dark (3) and a Hound Pack (3), Threat 11: a Standard fight. Woe pool: 6.

- Volley 1: the party scripts Attack. The Pack scripts Maneuver and the GM spends 1 Woe on a bonus die. The Pack wins by 4: Impede on the attacker.
- Volley 2: the Knife scripts Feint, ignoring Defend. Tell: the lamp gutters. The Veteran scripts Attack with Heavy Hitter.
- Volley 3: a PC spends 2 Momentum to change a script. The GM may answer with 3 Woe to Interrupt.
- If a status or explicit effect Takes Out the Pack, remove it from participation without subtracting its 3 Grit from shared Disposition. Ordinary Disposition loss does not individually remove the Pack. Offer a concession when the side's shared Disposition drops under about 4; its original starting total remains 11 before setup modifiers.

8. Quick Checklist

- Intent, stakes and exits set before any roll.
- Threat budget near P. Mix at least two Roles.
- Superiority applied. Ambush counted.
- Three scripted actions per exchange, with no pattern.
- One Tell per adversary, shown before its Best action.
- Woe tracked and spent each exchange.
- Concession offered near one third of the side's starting shared Disposition.

CHAPTER V

Generic Descriptors

Twenty-four setting-neutral adjectives open the sentence: "I am a [Descriptor]..." Six belong to each pool. Each one gives +2 to that pool, a power tag, a weakness tag and a suggested Instinct. Setting books add Descriptors written for their worlds.

The adjective of the character sentence.

IN THIS CHAPTER

1. Descriptor Rules 52
2. Quick Reference 52
3. Descriptors 53

1. Descriptor Rules

Each Descriptor gives (Core Rules §3.1):

Element	Detail
Pool bonus	+2 to one pool
Power tag	1
Weakness tag	1 (can be compelled for Tychē Points)
Suggested Instinct	Use it or write your own

Each entry also has a hook: one question to answer at character creation. The answer often becomes your first Belief or a relationship. Every Descriptor works in any genre. Choose one from this chapter or, when playing in a setting, from that setting book's Descriptors.

2. Quick Reference

#	Descriptor	Pool	Power tag	Weakness tag
1	Burly	Sōma	*built like a door*	*too big to hide*
2	Charismatic	Pneuma	*the room turns to me*	*needs to be liked*
3	Compassionate	Pneuma	*a kind word opens doors*	*can't turn away suffering*
4	Cunning	Psychē	*three moves ahead*	*trusts no one's plan but mine*
5	Curious	Psychē	*has to know why*	*pokes at what's best left alone*
6	Furtive	Mētis	*keeps to the edges*	*uneasy in the open*
7	Hardy	Sōma	*shrugs off the cold*	*ignores my own injuries*
8	Haunted	Pneuma	*has seen the dark*	*the past won't stay buried*
9	Light-Fingered	Mētis	*quick hands*	*can't resist a pocket*
10	Loyal	Pneuma	*stands by my own*	*blind to my friends' faults*
11	Methodical	Psychē	*measures twice*	*slow under pressure*
12	Nimble	Mētis	*light on my feet*	*too quick to trust my footing*
13	Observant	Psychē	*misses nothing*	*distracted by detail*
14	Reckless	Sōma	*charges in first*	*never looks before leaping*
15	Relentless	Sōma	*never stops coming*	*doesn't know when to quit*
16	Resolute	Pneuma	*iron will*	*rigid when plans change*
17	Restless	Mētis	*can't sit still*	*poor at waiting*
18	Scholarly	Psychē	*well read*	*lives in books, not boots*
19	Serene	Pneuma	*calm in the storm*	*slow to anger, slower to act*
20	Sly	Mētis	*always an angle*	*nobody takes my word*
21	Steady	Mētis	*hands like stone*	*slow to start*
22	Stubborn	Sōma	*will not be moved*	*can't admit I'm wrong*
23	Suspicious	Psychē	*notices what's off*	*sees enemies everywhere*
24	Weathered	Sōma	*seen worse than this*	*old wounds ache*

3. Descriptors

1. Burly

> *You fill doorways. People step aside before you ask.*

- Pool: +2 Sōma
- Power tag: *built like a door*
- Weakness tag: *too big to hide*
- Suggested Instinct: "If something is heavy, I pick it up myself."
- Hook: What did you carry, haul or break before this life began?

2. Charismatic

> *When you speak, people stop and listen, whether they want to or not.*

- Pool: +2 Pneuma
- Power tag: *the room turns to me*
- Weakness tag: *needs to be liked*
- Suggested Instinct: "If a crowd gathers, I take the stage."
- Hook: Who once followed you, and where did you lead them?

3. Compassionate

> *You have never walked past someone in pain. You have paid for that more than once.*

- Pool: +2 Pneuma
- Power tag: *a kind word opens doors*
- Weakness tag: *can't turn away suffering*
- Suggested Instinct: "If someone is hurting, I stop to help."
- Hook: Whose suffering did you fail to ease, and does it still weigh on you?

4. Cunning

> *You see the board, the pieces and the hand moving them.*

- Pool: +2 Psychē
- Power tag: *three moves ahead*
- Weakness tag: *trusts no one's plan but mine*
- Suggested Instinct: "If someone offers a deal, I look for the catch."
- Hook: Whose plan did you once see through, and what did it cost them?

5. Curious

> *A locked door is a question. You've never been good at leaving questions alone.*

- Pool: +2 Psychē
- Power tag: *has to know why*
- Weakness tag: *pokes at what's best left alone*
- Suggested Instinct: "If something is hidden, I look inside."
- Hook: What secret did you uncover that you wish you hadn't?

6. Furtive

> *You keep to walls and corners. Being noticed has never gone well for you.*

- Pool: +2 Mētis
- Power tag: *keeps to the edges*
- Weakness tag: *uneasy in the open*
- Suggested Instinct: "If I enter a room, I check the shadows first."
- Hook: Who are you keeping out of sight of, and why?

7. Hardy

> *Cold, hunger and pain are old companions. You've learned to walk on with them.*

- Pool: +2 Sōma
- Power tag: *shrugs off the cold*
- Weakness tag: *ignores my own injuries*
- Suggested Instinct: "If I'm hurt, I keep going until the job is done."
- Hook: What hardship did you survive that killed others?

8. Haunted

> *Something from your past follows you. Some nights you can almost hear it.*

- Pool: +2 Pneuma
- Power tag: *has seen the dark*
- Weakness tag: *the past won't stay buried*
- Suggested Instinct: "If I'm alone at night, I keep a light on."
- Hook: What did you see that you can never forget?

9. Light-Fingered

> *Things find their way into your hands. You rarely remember deciding to take them.*

- Pool: +2 Mētis
- Power tag: *quick hands*
- Weakness tag: *can't resist a pocket*
- Suggested Instinct: "If something valuable is left unattended, I take it."

- Hook: What is the one thing you stole that you can never give back?

10. Loyal

> *You chose your people. Nothing will make you abandon them.*

- Pool: +2 Pneuma
- Power tag: *stands by my own*
- Weakness tag: *blind to my friends' faults*
- Suggested Instinct: "If someone I trust is threatened, I step between them and it."
- Hook: Who did you swear to stand by, and have they earned it?

11. Methodical

> *Haste makes mistakes. You check everything twice and trust your notes.*

- Pool: +2 Psychē
- Power tag: *measures twice*
- Weakness tag: *slow under pressure*
- Suggested Instinct: "If I'm unsure, I make a list."
- Hook: What disaster taught you never to skip a step?

12. Nimble

> *You move like water, over walls and through gaps others never see.*

- Pool: +2 Mētis
- Power tag: *light on my feet*
- Weakness tag: *too quick to trust my footing*
- Suggested Instinct: "If the ground gives way, I move before I think."
- Hook: What did you learn to escape from, and who taught you?

13. Observant

> *You notice the scuffed boot, the nervous glance, the window left open.*

- Pool: +2 Psychē
- Power tag: *misses nothing*
- Weakness tag: *distracted by detail*
- Suggested Instinct: "If I enter a place, I count the exits and the people."
- Hook: What small detail once saved your life?

14. Reckless

> *Thinking is for later. Right now, something needs doing.*

- Pool: +2 Sōma
- Power tag: *charges in first*
- Weakness tag: *never looks before leaping*
- Suggested Instinct: "If there's danger ahead, I go at it head-on."
- Hook: Who got hurt the last time you charged in?

15. Relentless

> *You don't stop. Not when you're tired, not when you're hurt, not when it's hopeless.*

- Pool: +2 Sōma
- Power tag: *never stops coming*
- Weakness tag: *doesn't know when to quit*
- Suggested Instinct: "If I start a chase, I finish it."
- Hook: What did you chase and never catch?

16. Resolute

> *Your word is iron. Once you decide, the world bends or breaks against you.*

- Pool: +2 Pneuma
- Power tag: *iron will*
- Weakness tag: *rigid when plans change*
- Suggested Instinct: "If I give my word, I keep it."
- Hook: What promise are you still keeping, and to whom?

17. Restless

> *Stillness itches. You need to move, act, see what is over the next hill.*

- Pool: +2 Mētis
- Power tag: *can't sit still*
- Weakness tag: *poor at waiting*
- Suggested Instinct: "If things go quiet, I go looking for trouble."
- Hook: What place could never hold you, and who did you leave there?

18. Scholarly

> *You have read more than most people will ever hear spoken.*

- Pool: +2 Psychē
- Power tag: *well read*
- Weakness tag: *lives in books, not boots*
- Suggested Instinct: "If a problem is new, I look for precedent."
- Hook: Which book or teacher shaped you, and what did it leave unanswered?

19. Serene

> *Storms rage around you. Inside, you are still water.*

- Pool: +2 Pneuma
- Power tag: *calm in the storm*
- Weakness tag: *slow to anger, slower to act*
- Suggested Instinct: "If panic spreads, I stay still and speak softly."
- Hook: What taught you peace, and what would shatter it?

20. Sly

> *There is always another way in, another word to say, another deal to make.*

- Pool: +2 Mētis
- Power tag: *always an angle*
- Weakness tag: *nobody takes my word*
- Suggested Instinct: "If there's a shortcut, I find it."
- Hook: Who did you outwit, and are they still looking for you?

21. Steady

> *Your hands don't shake. When everyone else panics, you are the one who aims.*

- Pool: +2 Mētis
- Power tag: *hands like stone*
- Weakness tag: *slow to start*
- Suggested Instinct: "If the moment is tense, I breathe and take my time."
- Hook: When did your steadiness matter most, and who was counting on you?

22. Stubborn

> *You've been told no all your life. You've ignored it all your life.*

- Pool: +2 Sōma
- Power tag: *will not be moved*
- Weakness tag: *can't admit I'm wrong*
- Suggested Instinct: "If someone tells me to stop, I dig in."
- Hook: What did everyone say was impossible that you did anyway?

23. Suspicious

> *Everyone wants something. You just haven't worked out what yet.*

- Pool: +2 Psychē
- Power tag: *notices what's off*
- Weakness tag: *sees enemies everywhere*
- Suggested Instinct: "If a stranger is too friendly, I watch their hands."
- Hook: Who betrayed you, and how did you not see it coming?

24. Weathered

> *Wind, sun and years have worn you down to something hard and lasting.*

- Pool: +2 Sōma
- Power tag: *seen worse than this*
- Weakness tag: *old wounds ache*
- Suggested Instinct: "If conditions turn harsh, I take the worst of it first."
- Hook: Where did you earn your scars, and who was with you?

CHAPTER VI

Generic Playbooks

The six genre-neutral playbooks: Bellator, Furcifer, Savant, Interlocutor, Explorator and Adept. Each has eight special abilities, a capstone and starting equipment for three genres. Setting books can reskin these six or add new ones.

The noun of the character sentence.

IN THIS CHAPTER

1. Playbook Rules 57
2. Equipment Rules 58
3. Bellator 59
4. Furcifer 61
5. Savant 63
6. Interlocutor 65
7. Explorator 67
8. Adept 69
9. Design Notes 72

1. Playbook Rules

1.1 What a Playbook Gives You

Element	Detail
Base pools	Sōma / Mētis / Psychē / Pneuma, totalling 36. Add 4 points of your choice and +2 from your Descriptor
Edge	3 points: the fixed Edge listed, plus 1 point from the listed choices
Anchor skill	Must be rated +3 or +4 in your pyramid
Suggested skills	A recommended pyramid; change it freely
Playbook tags	Choose 2 power tags from the playbook's list
XP trigger	One playbook behaviour that earns XP (Core Rules §12.1)
Special abilities	1 free at creation; up to 2 more at creation for 1 Refresh each, plus any ★ Major cost (2 Refresh total for a ★ creation extra)
Starting equipment	Signature items (choose 1 of 2), playbook kit, and always-carried items
BIG examples	Sample Beliefs, Goals, and Instincts
Relationships	1 ally and 1 rival from the playbook's list

1.2 Ability Notation

- ★ Major — costs 1 Refresh whenever you take it (creation or advancement). If taken as one of the up to two creation extras, add the extra ability's 1-Refresh price: 2 Refresh total, not 3. A non-veteran Major taken through advancement costs 1 Refresh; veteran costs below remain additional.
- ◆ Capstone — unlocked after 12 Advances if you have at least 4 abilities from this playbook. Costs no Refresh. One capstone per character.
- Veteran abilities: after 6 Advances, you may take an ability from another playbook as an Advance. It costs 1 Refresh in addition to any ★ cost.

1.3 Rules References Used in Abilities

Term	Meaning (proposal section)
Power	Successes generated by a roll; spent on Effects (§2.5, §5)
Effort	Spend 3 − Edge from a pool for a bonus die (before rolling) or +1 Power (after a success) (§2.4)
Resist	Roll 2 + Edge d12 and pay pool points by the highest die (no Edge reduction); at Edge −2 or lower, roll |Edge| dice and keep the lowest. Reduce a status by 2 tiers (§6)
Status	Tiered condition 1–6; tier 6 = Taken Out (§5.1)
Truth	Scene, site, region, or campaign tag that shifts Difficulty by ±3 (§8)
Disposition	Conflict "hit points" (§10)
Injury trade	Once per conflict, accept a tier-2/3/4 injury to cancel 1/2/3 Disposition loss (§10.9)
Dying	Life-threatening tier-6 physical harm: 3-segment clock; Medicine vs. Hard 18 stabilises (§6.7)
Checks / Grind	Players' Turn currency and the hardship clock (Module B)

2. Equipment Rules

2.1 Load (Blades in the Dark)

Before a mission, choose your load. During play, declare items from your playbook kit as you need them and mark their load.

Load	Capacity	Effect
Light	3	You blend in; nothing obvious marks you as armed or burdened
Normal	5	You look ready for trouble
Heavy	7	You're *encumbered*: Mētis Effort costs +1 and Stealth Difficulty is one step higher

- Signature items are chosen at creation and always count against load when carried (most are 1–2).
- Always-carried items (load 0) are always on you.
- Items marked (0) cost no load.

2.2 Gear as Tags

- Every item is a power tag when it's relevant, e.g. *crowbar* helps Athletics to force a door. Item tags count toward the +2 tag cap.
- Weapons also give one or more conflict action tags (Core Rules §10.8), e.g. *+1 Attack*.
- Quality: a fine or advanced item gives one extra benefit listed in its entry (it doesn't raise the cap).
- Escalation: some items carry the *Escalation* tag (Core Rules §9.3). Carried openly into a scene, each gives the GM 1 Woe.

2.3 Armour and Shields

Item	Load	Effect
Light armour	1	*Armour 1*: when you Resist physical harm, reduce it by 1 extra tier
Heavy armour	2	*Armour 2*: reduce by 2 extra tiers; Mētis Effort +1 while worn
Shield / riot shield / energy barrier	1	*+1 Defend* in Fight conflicts; counts as cover outside conflicts

Armour that absorbs a tier-4+ hit is *damaged* (−1 Armour) until repaired during downtime. Armour never reduces Disposition loss, an injury you accepted as payment, or a running-dry status (Core Rules §6).

2.4 Common Gear (any playbook)

Load	Fantasy	Modern	Sci-Fi
(0)	Belt knife, flint & steel, coin purse	Phone, wallet, keys, pocketknife	Comm unit, credchip, multitool
1	Rope (15 m), lantern & oil, trail rations (2 days)	Flashlight, first-aid kit, water & snacks	Glow rod, medpatch ×2, ration bars
1	Bedroll & blanket	Duffel with spare clothes	Thermal sheet & sleep sack
1	Crowbar or pry bar	Crowbar or bolt cutters	Hydraulic pry tool
2	Tent or tarp	Tent or camping kit	Pop-up shelter

3. Bellator

> *Muscle, grit, and a willingness to stand in front of trouble. Soldiers, brawlers, bouncers, gladiators, mercenaries, security officers.*

Base pools (Sōm / Mēt / Psy / Pne)	12 / 10 / 6 / 8
Edge	Sōma 2, plus 1 in Mētis or Pneuma
Anchor skill	Fight or Brawl
Suggested skills	+4 Fight · +3 Athletics, Endure · +2 Brawl, Intimidate, Shoot · +1 Notice, Will, Survival, Medicine
XP trigger	Address a challenge with force or threats

Playbook tags (choose 2): *built like a wall* · *veteran of the line* · *scarred and unbothered* · *iron grip* · *knows how a fight will go* · *the look that stops trouble*

3.1 Special Abilities

#	Ability	Effect
1	Juggernaut	When you Resist physical harm with Sōma, reduce the status by 3 tiers instead of 2.
2	Brutal	Once per roll, when you spend Power on Attack with Fight or Brawl, the status gains +1 tier for free.
3	Bodyguard	When an ally within reach would suffer a consequence, you may take it instead. If you Resist it, your Edge counts as 1 higher for that roll.
4	Cleave	When you attack a group or minions, you get one free Extra Feat per roll (hit a second target, break their line, and so on).
5	Menacing	You may use Sōma for Intimidate Effort and Resistance. When you succeed on Intimidate against minions, spend 1 Momentum to make them flee, surrender, or freeze.
6	Pain Tolerance	Ignore the roll penalty from harmful physical statuses of tier 1–2. At tier 3+, the penalty is reduced by 1.
7	★ Berserker	Once per scene, enter a fury: you get +1 bonus die (free) on Fight, Brawl, and Athletics rolls for the rest of the scene. You can't script Defend or retreat. At scene end, lose 2 Sōma or take *Weary*.
8	★ Unstoppable	Once per scene, when a status would reach tier 6 on you, keep acting until the end of the scene. Then you're Taken Out as normal.
◆	Legend of the Field	Your reputation is a Campaign Truth (*"Everyone knows [name]"*). In Fight conflicts, enemy Disposition starts −2, and the GM pays +1 Woe for reinforcements while you stand.

3.2 Starting Equipment

Signature weapon (choose 1)

Genre	Option A	Option B
Fantasy	Greataxe or warhammer (2) — *+1 Attack*, *crushing blows*	Longsword & shield (2) — *+1 Attack*, *+1 Defend*
Modern	Combat shotgun (2) — *+1 Attack*, *room-clearer*	Baseball bat & pistol (2) — *+1 Attack* (bat), *sidearm*
Sci-Fi	Shock maul (2) — *+1 Attack*, *stuns on hit* (spend 1 Power: add *dazed-1*)	Vibro-blade & energy barrier (2) — *+1 Attack*, *+1 Defend*

Playbook kit (declare during play)

Load	Fantasy	Modern	Sci-Fi
1	Mail shirt (light armour)	Tactical vest (light armour)	Ballistic weave (light armour)
2	Plate harness (heavy armour)	Riot gear (heavy armour)	Combat exo-plate (heavy armour)
1	Throwing axes ×3 — *+1 Attack* (range)	Collapsible baton — *+1 Attack*	Concussion grenades ×2 — *+1 Maneuver*
1	Manacles & chain	Zip-cuffs & pepper spray	Mag-cuffs & stun prod
1	Whetstone & armourer's kit	Gun-cleaning kit & spare mags	Field repair kit
1	Flask of strong drink	Energy drinks & painkillers	Stim-shot (restore 2 Sōma, once)

Always carried (0): Fantasy: knuckle-wraps, battle trophy. Modern: brass knuckles, gym bag. Sci-Fi: reinforced gloves, unit insignia.

3.3 BIG Examples

- Belief: "Strength is only worth something when it protects the weak." / "Every fight I walk away from comes back worse."
- Goal: "Get the merchant to the city gates alive." / "Find out who hired the thugs."
- Instinct: "Always stand between my friends and the door." / "Never let an insult pass in public."

Relationships: Ally — an old comrade-in-arms, a trainer, a medic who's patched you up too often. Rival — the one who beat you once, a former commander, a rival enforcer.

4. Furcifer

> *Quiet, precise, and always three exits ahead. Thieves, spies, scouts, assassins, infiltrators, saboteurs.*

Base pools (Sōm / Mēt / Psy / Pne)	8 / 12 / 8 / 8
Edge	Mētis 2, plus 1 in Psychē or Sōma
Anchor skill	Stealth
Suggested skills	+4 Stealth · +3 Notice, Craft · +2 Athletics, Deceive, Shoot · +1 Fight, Tech, Investigate, Drive/Pilot
XP trigger	Address a challenge with stealth or precision

Playbook tags (choose 2): *light on my feet* · *eyes in the back of my head* · *steady hands* · *knows the underworld* · *forgettable face* · *patient as a stone*

4.1 Special Abilities

#	Ability	Effect
1	Ghost	When you spend Effort on a Stealth roll, your first use of Effort costs 0 pool points. Once per scene, when spotted, spend 1 Momentum to declare you were never seen; you're in a nearby hidden position.
2	Opportunist	When you act against a target that's unaware of you or has an *Impeded* status, gain +1 Power on a success.
3	Light Fingers	When you succeed on a theft, plant, or sabotage roll (Stealth or Craft), gain a free Extra Feat.
4	Infiltrator	Once per roll, ignore one Truth that would raise the Difficulty of sneaking, climbing, or bypassing security.
5	Quick Reflexes	You always act first when violence breaks out. In conflicts, changing one of your scripted actions costs 1 Momentum instead of 2.
6	Escape Artist	When you Resist capture, restraint, falls, or traps with Mētis, the cost is 0 on a highest die of 5+.
7	★ Flashback	Once per mission, declare a flashback to something you prepared earlier. Pay Momentum by plausibility: 0 (obvious), 1 (reasonable), 2 (a stretch), 3 (wild). Then roll as normal; on a success, it happened.
8	★ Deadly Precision	Against an unaware or *Impeded* target, Attack effects cost half Power (round up): 2 Power buys a tier-3 or tier-4 status.
◆	Nobody Sees Me Coming	Once per session, declare you're already somewhere you could plausibly have reached. Your first roll there gets +2 bonus dice for free, and the GM can't spend Woe to reveal you during that roll.

4.2 Starting Equipment

Signature item (choose 1)

Genre	Option A	Option B
Fantasy	Twin daggers (1) — *+1 Attack*, *+1 Feint*	Shortbow & black-fletched arrows (1) — *+1 Attack* (range), *silent shots*
Modern	Suppressed pistol (1) — *+1 Attack*, *quiet*	Lockpicks & bypass kit (1) — *opens what's closed*, Advance security clocks +1 per roll
Sci-Fi	Needle pistol (1) — *+1 Attack*, *silent*, *toxin-loaded*	Holo-cloak (1) — *+1 Feint*, *bends light* (Stealth tag)

Playbook kit

Load	Fantasy	Modern	Sci-Fi
1	Thieves' tools	Lockpicks & electronic bypass	Slicer kit
1	Grappling hook & silk cord	Climbing harness & line	Monofilament line & grapple gun
1	Dark hooded cloak — *shadow-dyed*	Black clothing & balaclava	Thermal-masking suit
1	Caltrops & smoke vials — *+1 Maneuver*	Smoke grenade — *+1 Maneuver*	Sensor jammer — *+1 Maneuver*
1	Garrotte & poison vial	Burner phones ×2	Spy drone (Discover, 1 use per scene)
1	Padded leather (light armour)	Concealed vest (light armour)	Flex-mesh undersuit (light armour)

Always carried (0): Fantasy: hidden blade, chalk. Modern: hairpin picks, earpiece. Sci-Fi: implanted lockpick, false ID chip.

4.3 BIG Examples

- Belief: "Everyone has a price; I just haven't found mine." / "The less blood, the better the job."
- Goal: "Get the ledger out of the counting house." / "Learn who sold out my old crew."
- Instinct: "Always check for a second way out." / "Never touch anything without gloves."

Relationships: Ally — a fence, a forger, a former mentor. Rival — an inspector who's close to catching you, a rival thief, the partner who betrayed you.

5. Savant

> *Knowledge is a weapon, a shield, and a cure. Scholars, detectives, scientists, physicians, archivists, engineers.*

Base pools (Sōm / Mēt / Psy / Pne)	7 / 8 / 13 / 8
Edge	Psychē 2, plus 1 in Pneuma or Mētis
Anchor skill	Lore or Investigate
Suggested skills	+4 Lore · +3 Investigate, Medicine · +2 Notice, Tech, Empathy · +1 Persuade, Will, Craft, Arcana
XP trigger	Address a challenge with knowledge or insight

Playbook tags (choose 2): *read everything twice* · *eye for detail* · *steady surgeon's hands* · *speaks the old tongues* · *respected in academic circles* · *thinks in diagrams*

5.1 Special Abilities

#	Ability	Effect
1	Encyclopedic	Once per scene, ask one Discover question about a subject covered by your Lore without rolling.
2	Analyze	When you study a foe or obstacle, each Discover you buy also reveals one weakness tag of the target. Creating a story tag that exploits a revealed weakness costs 1 Power instead of 2.
3	Field Medic	Restore effects from Medicine cost 1 Power per 2 tiers. You can treat *Sick* (Module B) at Standard Difficulty instead of Hard.
4	Steady Mind	When you Resist confusion, illusion, deception, or forbidden knowledge with Psychē, reduce the status by 3 tiers.
5	Decipher	Codes, unknown languages, and ancient devices give way. Each success on a deciphering roll Advances its clock +1 extra segment.
6	Briefing	When an ally acts on information you gave them this scene, they get +1 (counts as a tag). Once per scene, give the whole party this bonus.
7	★ Connect the Dots	Once per session, propose a hidden Truth based on clues you've found. The GM either makes it true or tells you one true hidden Truth about the situation instead.
8	★ I Planned for This	Once per scene, after any ally rolls, spend 2 Psychē to let them reroll all dice and keep the better result.
◆	Master of the Field	Choose one field (medicine, occult, engineering, history, and so on). Rolls in that field are one Difficulty step lower. Once per session, ask a Discover question about what will happen in that field; the GM answers truthfully.

5.2 Starting Equipment

Signature item (choose 1)

Genre	Option A	Option B
Fantasy	Annotated grimoire / great reference (1) — *the answer is in here somewhere*; once per scene, +1 to Lore	Physician's satchel (1) — *herbs and blades*; Restore +1 tier once per scene
Modern	Laptop with research databases (1) — *online archive*	Forensics kit (1) — *evidence never lies*; +1 to Investigate at scenes
Sci-Fi	Datapad with AI assistant (1) — *ask the archive*; one free Discover per session	Bioscanner (1) — *reads the body*; Medicine and Notice tag

Playbook kit

Load	Fantasy	Modern	Sci-Fi
1	Journal, ink, and charcoal	Notebook, camera, and voice recorder	Holo-recorder
1	Magnifying lens & specimen jars	UV light & evidence bags	Spectral analyser
1	Herbalist's kit	Full first-aid kit	Advanced medkit
1	Quarterstaff — *+1 Defend*	Taser — *+1 Maneuver*	Stun baton — *+1 Maneuver*
1	Scroll case with maps	Tablet with offline maps	Star charts / topographic uplink
1	Alchemist's reagents (1 cypher-like use: Create smoke, light, or acid)	Chemistry kit	Nanite sample kit

Always carried (0): Fantasy: spectacles, chalk. Modern: reading glasses, pen. Sci-Fi: translator earpiece, stylus.

5.3 BIG Examples

- Belief: "No knowledge is forbidden; only misused." / "The dead deserve the truth about how they died."
- Goal: "Translate the inscription before the eclipse." / "Identify the poison."
- Instinct: "Always take a sample." / "Never trust a source I can't verify."

Relationships: Ally — a former teacher, a librarian, a patient who owes you their life. Rival — an academic rival, an ex-colleague who stole your work, a cultist who wants your research.

6. Interlocutor

> *Words open doors that swords can't. Diplomats, con artists, nobles, negotiators, preachers, captains.*

Base pools (Sōm / Mēt / Psy / Pne)	7 / 9 / 9 / 11
Edge	Pneuma 2, plus 1 in Psychē or Mētis
Anchor skill	Persuade
Suggested skills	+4 Persuade · +3 Empathy, Deceive · +2 Will, Notice, Intimidate · +1 Lore, Fight, Stealth, Investigate
XP trigger	Address a challenge with charm, lies, or bargaining

Playbook tags (choose 2): *silver tongue* · *friends in every port* · *reads people like books* · *noble bearing* · *a hundred faces* · *calm under fire*

6.1 Special Abilities

#	Ability	Effect
1	Silver Tongue	When you Persuade or Deceive, creating a story tag about a target's attitude (*convinced*, *trusts us*, *fooled*) costs 1 Power instead of 2.
2	Read the Room	Spend 1 Power on Discover to learn an NPC's Belief, Goal, or Instinct. You get +1 (counts as a tag) against them for the scene.
3	Network	Once per session, declare a contact in the current location as a story tag (*contact: harbourmaster Elsa*). The GM gives them a quirk or something they want in return.
4	Smooth Recovery	Once per scene, turn a failed Persuade, Deceive, or Empathy roll into a Success at a Cost.
5	Many Faces	With a moment to prepare, Create the story tag *I belong here* for 1 Power. It lasts the scene and removes one Truth that would raise the Difficulty of mingling or entry.
6	Command	In conflicts, your team ignores the rotation rule for one volley per exchange. Once per exchange, an ally's Defend restores +1 Disposition.
7	★ Inspire	You can spend your Tychē Points on allies' rolls. Enhance effects you create for allies cost 1 Power per 2 tiers.
8	★ Crowd Work	You influence a group as if it were one person. In Argument or Negotiation conflicts against a crowd or council, your Attacks remove +1 Disposition.
◆	Word Is Law	Once per session, a non-villain NPC agrees to a reasonable request without a roll. In Argument and Negotiation conflicts, your side starts with +4 Disposition.

6.2 Starting Equipment

Signature item (choose 1)

Genre	Option A	Option B
Fantasy	Signet ring & letters of introduction (0) — *carries a name that opens doors*	Rapier (1) — *+1 Attack*, *+1 Feint*, *duelling style*
Modern	Tailored suit & business cards (0) — *looks like money*	Concealed pistol (1) — *+1 Attack*, *never seen it coming*
Sci-Fi	Diplomatic credentials (0) — *official envoy*	Hold-out blaster (1) — *+1 Attack*, *hidden in a sleeve*

Playbook kit

Load	Fantasy	Modern	Sci-Fi
1	Fine clothes for court	Formal wear & accessories	Holo-fashion wardrobe
1	Disguise kit & wigs	Disguise kit & fake IDs	Holo-disguise emitter
1	Purse of gold — *money talks* (1 use per mission: Create tag *bribed*)	Credit card — *money talks* (same)	Credit stick — *money talks* (same)
1	Bottle of fine wine	Gift basket / bottle of scotch	Rare off-world delicacy
1	Forged seals & papers	Forged documents	Spoofed ID chip
1	Brocaded doublet (light armour)	Armoured coat (light armour)	Deflector jacket (light armour)

Always carried (0): Fantasy: perfume, deck of cards. Modern: smartphone with contacts, breath mints. Sci-Fi: translator implant, personal comm.

6.3 BIG Examples

- Belief: "Every war ends at a table; I'd rather start there." / "A lie that saves a life is no sin."
- Goal: "Get the guild master to sign the truce." / "Find out what the duke really wants."
- Instinct: "Always learn someone's name." / "Never be the first to name a price."

Relationships: Ally — a well-placed patron, a loyal servant, a reporter. Rival — a political opponent, a jilted lover, someone you conned who wants payback.

7. Explorator

> *At home where the map ends. Rangers, hunters, pilots, guides, explorers, scouts, voyageurs.*

Base pools (Sōm / Mēt / Psy / Pne)	11 / 11 / 7 / 7
Edge	Sōma 1, Mētis 1, plus 1 in any pool
Anchor skill	Survival
Suggested skills	+4 Survival · +3 Notice, Shoot · +2 Athletics, Endure, Drive/Pilot · +1 Stealth, Medicine, Lore, Fight
XP trigger	Address a challenge with endurance, travel, or knowledge of the land

Playbook tags (choose 2): *reads the weather* · *never lost* · *sharp-eyed hunter* · *tireless* · *at home in the wild* · *steady at the helm*

7.1 Special Abilities

#	Ability	Effect
1	Pathfinder	As Guide (Module B), each Power spent on Make Time Advances the Journey clock +1 extra segment. Ignore one terrain Truth per leg.
2	Forager	As Quartermaster, a success also clears *Hungry & Thirsty* for the whole party and gives +1 Supplies for free.
3	Tracker	When you track or read signs, each Discover you buy gives two answers.
4	Hunter's Eye	With Shoot, once per roll ignore one Truth about cover, distance, or weather. At long range, gain +1 Power on a success.
5	Ambusher	In wild terrain, if you had time to prepare, your side starts a Fight conflict with +2 Disposition, and your first-volley Attack counts as independent regardless of the opponent's action.
6	At the Helm	Drive/Pilot rolls with your own vehicle or boat may use Survival. Your vehicle gains one power tag (*swift*, *rugged*, *nimble*). In Chase conflicts, your side gets +3 Disposition.
7	★ Animal Companion	You have a companion (hound, hawk, horse, drone in sci-fi) with 2 power tags and 1 weakness. Once per scene it gives you a free bonus die, or it acts on its own using your Survival. It can take statuses; tier 6 means it's lost until downtime.
8	★ Weather Sense	Once per session, declare the weather or terrain Truth for the next scene (*thick fog*, *rising river*, *clear skies*).
◆	One With the Wild	In wilderness, the party's Grind clock is 2 segments larger, and you can't be surprised. Once per session, lead the party into the wild to end any chase or pursuit in your favour.

7.2 Starting Equipment

Signature item (choose 1)

Genre	Option A	Option B
Fantasy	Longbow (2) — *+1 Attack* (range), *hunter's draw*	Spear & hatchet (2) — *+1 Maneuver* (spear), *+1 Attack* (hatchet)
Modern	Scoped hunting rifle (2) — *+1 Attack* (range), *+1 Maneuver*	Canoe or 4×4 truck (vehicle, 0 load) — *my rig*, Drive/Pilot tag
Sci-Fi	Long-las rifle (2) — *+1 Attack* (range), *thermal scope*	Grav-bike or skiff (vehicle, 0 load) — *my rig*, Drive/Pilot tag

Playbook kit

Load	Fantasy	Modern	Sci-Fi
1	Hunting knife & skinning tools	Survival knife & multitool	Survival blade with tool kit
2	Tent, bedroll & cookpot	Lightweight tent, sleeping bag & stove	Pop-up shelter & thermal pack
1	Snares & fishing line	Fishing kit & snares	Auto-snare & water purifier
1	Map case & compass	GPS, maps & compass	Topographic scanner
1	Leather jerkin (light armour)	Waxed-canvas jacket (light armour)	Environment suit (light armour, *sealed*)
1	Trail rations & waterskins (+2 Supplies)	Dehydrated meals & filter (+2 Supplies)	Nutrient packs & reclaimer (+2 Supplies)

Always carried (0): Fantasy: tinderbox, whistle. Modern: ferro rod, bug spray. Sci-Fi: emergency beacon, rebreather.

7.3 BIG Examples

- Belief: "The land gives to those who respect it." / "No one gets left on the trail."
- Goal: "Reach the trading post before the freeze." / "Find the lost survey team."
- Instinct: "Always check the sky before setting out." / "Never camp where you can't see the approach."

Relationships: Ally — a trapper, a bush pilot, a village elder. Rival — a poacher, a rival guide, the company that wants your land.

8. Adept

Power from beyond the ordinary: magic, psionics, faith, or impossible technology. Mages, psychics, priests, hackers, gadgeteers.

Base pools (Sōm / Mēt / Psy / Pne)	7 / 8 / 9 / 12
Edge	Pneuma 2 (Arcana Adepts) or Psychē 2 (Tech Adepts), plus 1 in any other pool
Anchor skill	Arcana (magic, faith, psionics) or Tech (hacking, gadgets)
Suggested skills	+4 Arcana · +3 Lore, Will · +2 Notice, Medicine, Persuade · +1 Investigate, Empathy, Deceive, Tech
XP trigger	Address a challenge with your powers or gadgets

Playbook tags (choose 2): *touched by the Other* · *disciplined mind* · *sees what others can't* · *blessed* · *tinkerer's genius* · *fluent in the old pacts*

8.1 Core Feature — Domain (free)

Every Adept has a Domain: a broad power tag describing what they can do (*fire*, *healing*, *telekinesis*, *shadows*, *machines*, *networks*, *the dead*, *weather*).

- Workings: within your Domain, you can attempt any effect with your anchor skill. The GM sets Difficulty by scope:

Scope	Difficulty	Example (Domain: fire)
Minor, personal	Easy 12	Light a candle, warm your hands
Significant	Standard 15	Hurl a firebolt, melt a lock
Dramatic	Hard 18	Wall of flame across a street
Spectacular	Formidable 21	Set a ship ablaze
World-shaking	Heroic 24 (usually a Ritual)	Call down a firestorm

- Cost: each working costs 1 point from Pneuma (Arcana) or Psychē (Tech), in addition to any Effort.
- Backlash: doubles on a failure or cost cause a backlash. The GM picks a fitting status for you (*burned-2*, *drained-2*, *glitched-2*) or a wild effect, in addition to the normal complication.
- Your Domain counts as a power tag on workings (inside the +2 cap).

8.2 Special Abilities

#	Ability	Effect
1	Focused Channel	Workings inside your Domain cost 0 pool points if you don't use Effort on that roll.
2	Ward	You can create protective statuses (*warded-X*) with Enhance. While warded, an ally reduces supernatural or tech-based harm by +1 tier when Resisting.
3	Sense the Unseen	Once per scene, ask a free Discover question about hidden supernatural or technological forces nearby. You always notice when such forces are used near you.
4	Overchannel	When you use Effort for Power on a working, gain +2 Power instead of +1, but take *strained-1*.
5	Ritual	Given time, materials, and a safe place, run a working as a progress clock instead of a single roll (8 segments for Formidable, 12 for Heroic). Ritual results can create Site or Region Truths.
6	Bound Servant	You have a minor spirit, construct, or drone with one power tag and one weakness. It can scout (one free Discover per scene in places it can reach), carry messages, or handle simple tasks. It can't fight.
7	★ Second Domain	Gain a second Domain. Workings in it use the same rules.

#	Ability	Effect
8	★ Unleash	Once per scene, a working hits every target in an area or group, following the Area Rule (Core Rules §10.16, provisional for playtesting). Explicitly inflicted statuses apply at full tier to every affected character. In conflicts, apply normal Disposition loss once to the opposing side, plus 1 per additional opposing participant affected; do not multiply full loss by the number of targets or add a status to an ordinary conflict Attack. Afterwards, take *Weary* or lose 3 points from your casting pool.
◆	Ascendant	Once per session, a Heroic-scope working succeeds automatically with 5 Power, no ritual required. If you use it again before your next downtime, gain a Pneuma or Psychē Scar.

8.3 Starting Equipment

Signature focus (choose 1)

Genre	Option A	Option B
Fantasy	Staff or wand (1) — *conduit*; +1 to workings, *+1 Defend* (staff)	Holy symbol or ancestral talisman (0) — *faith made solid*; Resist supernatural harm with Edge +1
Modern	Occult focus (ring, chalk, athame) (0) — *conduit*	Custom cyberdeck / laptop (1) — *my rig*; +1 to Tech workings
Sci-Fi	Psi-amp headset (1) — *amplifier*; +1 to psionic workings	Neural jack & cyberdeck (1) — *direct interface*; +1 to Tech workings

Playbook kit

Load	Fantasy	Modern	Sci-Fi
1	Grimoire or prayer book	Occult library on a tablet	Encrypted data archive
1	Spell components pouch	Salt, chalk, candles & herbs	Spare power cells & focus crystals
1	Ritual dagger — *+1 Attack*	Pistol — *+1 Attack*	Sidearm blaster — *+1 Attack*
1	Warding charms ×2 (0-Power *warded-1* once each)	Talismans ×2 (same)	Firewall chips ×2 (same)
1	Robes of the order (light armour, *marks my calling*)	Long coat with hidden pockets (light armour)	Insulated bodysuit (light armour)
1	Scrying bowl or crystal	Drone with camera	Micro-drone swarm (Bound Servant gear)

Always carried (0): Fantasy: a small familiar token, incense. Modern: tarot deck, phone. Sci-Fi: diagnostic implant, data spike.

8.4 BIG Examples

- Belief: "Power is a debt, and I always pay my debts." / "Knowledge should be free; locks are an insult."
- Goal: "Seal the rift before the new moon." / "Crack the corporation's archive."
- Instinct: "Always ward the room before I sleep." / "Never use my power in front of the authorities."

Relationships: Ally — your teacher, a fellow initiate, an entity you've bargained with. Rival — a rival practitioner, a hunter of your kind, the order that cast you out.

9. Design Notes

9.1 Balance Targets

Playbook	Main pool	Conflict role	Exploration role	Social role
Bellator	Sōma	Attack / Defend	Endurance, forcing obstacles	Intimidation
Furcifer	Mētis	Feint / Maneuver	Infiltration, security	Deception
Savant	Psychē	Maneuver (Discover, analysis)	Investigation, healing	Expertise
Interlocutor	Pneuma	Argument and Negotiation lead	Contacts, disguise	Persuasion
Explorator	Sōma/Mētis	Ranged Attack, ambush	Travel, Grind, tracking	Local knowledge
Adept	Pneuma/Psychē	Flexible (Domain)	Supernatural or tech access	Varies by Domain

9.2 Things to Watch in Playtest

- Discount stacking: abilities that reduce Power costs (Silver Tongue, Analyze, Field Medic, Deadly Precision, Jury-Rig) are strong when stacked with Effort for Power. Cap at one cost reduction per Effect.
- Free bonus dice (Berserker, Animal Companion, Second Wind, Nobody Sees Me Coming) still count toward the +2 bonus die maximum.
- Adept workings are the most open-ended. If they overshadow other playbooks, increase the base working cost to 2 pool points, or let Focused Channel apply only to minor and significant workings.
- Vehicle signature items (Explorator, modern and sci-fi) are 0 load because they don't come on foot missions. Treat them as a story tag when they're not present.
- ★ count: each playbook has two Major abilities and every capstone is free. Characters who take both ★ abilities will be at Refresh 1–2, as intended.

CHAPTER VII

Generic Focuses

Twenty-four setting-neutral Focuses complete the sentence: "...who [Focus]." Each one has two power tags, a weakness, a link to another player character, and tiered abilities with a choice at Tiers 2 and 3.

The verb of the character sentence.

IN THIS CHAPTER

1. Focus Rules 74
2. Quick Reference 74
3. Combat Focuses 75
4. Stealth & Precision Focuses 76
5. Knowledge Focuses 76
6. Social Focuses 77
7. Wilderness & Travel Focuses 78
8. Weird Focuses 79
9. Design Notes 80

1. Focus Rules

1.1 What a Focus Gives You

Element	Detail
Power tags	2
Weakness tag	1 (can be compelled for Tychē Points)
PC link	A prompt that connects you to another player character
Tier 1 ability	Fixed; gained at creation for free
Tier 2 ability	Choose 1 of 2; after 3 Advances, costs an Advance
Tier 3 ability	Choose 1 of 2; after 6 Advances, costs an Advance

- The other option: once you've reached a tier, you may take its unchosen option later as a normal Advance.
- ★ Major: costs 1 Refresh when taken (Core Rules §4.1). Every Focus has exactly one ★ option, always at Tier 3, so you can always choose a path that keeps your Refresh.
- Any playbook can take any Focus. The "Suits" line is a suggestion.
- Changing Focus: at a major milestone, with GM approval, you can swap your Focus. You keep Tier 1 of the new one and rebuy higher tiers with Advances.

1.2 Weird Focuses ◈

Focuses marked ◈ Weird assume the supernatural, impossible technology, or both. In mundane settings the GM removes them from the list. Every other Focus works in any genre.

1.3 Shared Rules Reminders

- Free bonus dice from Focuses still count toward the +2 bonus die maximum.
- Abilities that add bonus above the tag cap only do so for the tag they name, and are limited to +1 above the normal +2 cap (maximum +3) unless stated otherwise.
- Only one cost reduction applies to a single Effect (e.g. you can't combine two "costs 1 Power instead of 2" abilities).

2. Quick Reference

#	Focus	Category	Suits	◆
1	Never Leaves Anyone Behind	Combat	Bellator, Explorator, Furcifer	
2	Leads From the Front	Combat	Interlocutor, Bellator, Explorator	
3	Masters a Weapon	Combat	Bellator, Furcifer, Explorator	
4	Fights Dirty	Combat	Bellator, Furcifer	
5	Moves Like a Shadow	Stealth & Precision	Furcifer, Explorator	
6	Never Misses	Stealth & Precision	Explorator, Furcifer, Bellator	
7	Opens Every Lock	Stealth & Precision	Furcifer, Savant, Adept	
8	Always Has an Escape Plan	Stealth & Precision	Furcifer, Interlocutor	
9	Builds Impossible Things	Knowledge	Savant, Adept, Explorator	
10	Heals the Broken	Knowledge	Savant, Adept, Interlocutor	
11	Solves the Unsolvable	Knowledge	Savant, Interlocutor, Furcifer	
12	Remembers What Was Forgotten	Knowledge	Savant, Adept, Explorator	
13	Talks Their Way Out of Anything	Social	Interlocutor, Furcifer	
14	Wears a Hundred Masks	Social	Interlocutor, Furcifer	
15	Knows Everyone Worth Knowing	Social	Interlocutor, Savant	
16	Carries the Weight of a Crown	Social	Interlocutor, Bellator	
17	Runs With the Pack	Wilderness & Travel	Explorator, Bellator	
18	Charts the Unknown	Wilderness & Travel	Explorator, Savant	
19	Lives Off the Land	Wilderness & Travel	Explorator, Bellator	
20	Was Born Behind the Wheel	Wilderness & Travel	Explorator, Furcifer	
21	Hunts the Things in the Dark	Weird	Savant, Adept, Bellator	◈
22	Walks Between Worlds	Weird	Adept, Savant	◈
23	Made a Bargain With Something Old	Weird	Any	◈
24	Is More Than Human	Weird	Any	◈

3. Combat Focuses

1. Never Leaves Anyone Behind

> *Loyal to a fault. You go back for the fallen, every time.*

- Power tags: *I've got your back*, *carry them out*
- Weakness tag: *can't walk away*
- PC link: "I once failed to save someone. [PC] reminds me of them."

Tier	Ability	Effect
1	Shield Bearer	When an ally next to you takes a status, spend 1 point from any pool to reduce it by 1 tier before they Resist.
2a	Second Wind	Once per scene, when an ally is Taken Out, you may act immediately to reach them. Your next roll to help or rescue them gets a free bonus die.
2b	Interpose	When you accept an injury to cancel Disposition loss from an Attack or Feint, cancel 1 additional Disposition loss, up to the loss inflicted. All normal injury-trade restrictions apply.
3a	No One Left	Once per session, when the party retreats or escapes, no one is left behind or captured. Each ally clears one tier-1 or tier-2 status.
3b	★ Living Wall	Once per scene, until your next action, all harm aimed at allies within reach hits you instead. You Resist each with Edge +1.

2. Leads From the Front

> *Captain, chief, or sergeant: people follow you.*

- Power tags: *born to command*, *they believe in me*
- Weakness tag: *every loss is on me*
- PC link: "[PC] was the first person who ever followed my lead."

Tier	Ability	Effect
1	Rally	Once per scene, spend 1 Momentum to restore 2 points to one pool of every ally who can hear you.
2a	Battle Plan	At the start of a conflict, before scripting, look at one of the opposing side's scripted actions for the first exchange.
2b	Lead by Example	When you succeed with 3+ Power, the next ally who acts toward the same goal gets a free bonus die.
3a	★ Warband	Gain a loyal crew (a group with 2 power tags and 1 weakness). It acts as one group, gives free Help once per scene, or holds a position. It takes statuses as a single target.
3b	Unbreak-able Line	Once per conflict, when your side's Disposition would drop to 0, it stays at 1 and you take a tier-2 status.

3. Masters a Weapon

> *Years of drill with one weapon: a blade, a rifle, a staff, bare fists.*

- Power tags: *one with my [weapon]*, *drilled every day*
- Weakness tag: *lost without it*
- PC link: "[PC] once saw me lose a duel, and kept it secret."

Tier	Ability	Effect
1	Signature Style	Choose a weapon type. That weapon's tag may add +1 above the normal +2 cap (maximum +3 from tags), and it gains a second conflict action tag (e.g. a sword also gives +1 Defend).
2a	Riposte	In Fight conflicts, when you win a versus roll with Defend, you may spend any of that Power to remove the opposing side's Disposition instead of restoring your side's.
2b	Disarming Master	The Disarm maneuver costs 2 Power instead of 3. Outside conflicts, Weaken can strip an opponent's weapon tag for the scene.
3a	Perfect Strike	Once per scene, after rolling with your weapon, turn one kept die into a 12. If that creates doubles, apply them.
3b	★ Weapon Saint	Your weapon becomes an artifact (Module A) with one extra power tag and an ability you design with the GM. It never depletes and costs no attunement Refresh.

4. Fights Dirty

> *Honour is for people who can afford to lose.*

- Power tags: *no rules in a fight*, *eye for a cheap shot*
- Weakness tag: *no one trusts me in a fair fight*
- PC link: "I taught [PC] that winning is the only thing that matters. They're still deciding if I was right."

Tier	Ability	Effect
1	Cheap Shot	Once per scene, as part of an Attack, Create a story tag (*sand in the eyes*, *low blow*) for 1 Power.
2a	Improvised Arsenal	Anything in reach is a weapon for you: chairs, bottles, tools. It gives +1 Attack or +1 Maneuver and costs no load.
2b	Kick Them While They're Down	Against a target with a harmful status of tier 2+, gain +1 Power on Attack.
3a	Every Trick in the Book	In Fight conflicts, your Feints remove +1 Disposition.
3b	★ Nothing Is Off-Limits	Once per session, declare a hazard Truth that was already there (*gas leak*, *rotten floor*, *loose cargo*). Your next roll that uses it gets a free Extra Feat.

4. Stealth & Precision Focuses

5. Moves Like a Shadow

> *Silent, patient, and impossible to pin down.*

- Power tags: *silent as snowfall*, *at home in darkness*
- Weakness tag: *uneasy in the light*
- PC link: "[PC] is the only one who always knows where I am."

Tier	Ability	Effect
1	Shadow-Born	Truths about darkness, noise, or crowds lower your Stealth Difficulty by two steps instead of one.
2a	Vanish	Once per scene, after any roll, become hidden if there's any cover nearby. No roll needed.
2b	Shadow Escort	Up to two allies can use your Stealth result instead of rolling their own.
3a	Unseen Hand	Any action you take while hidden gains +1 Power on a success.
3b	★ Living Shadow	Once per session, pass through a guarded or blocked area unnoticed (no roll) and arrive at a point you choose.

6. Never Misses

> *Sniper, archer, gunslinger: steady breath and a sharp eye.*

- Power tags: *steady breath*, *eye like a hawk*
- Weakness tag: *clumsy up close*
- PC link: "[PC] owes their life to a shot I made."

Tier	Ability	Effect
1	Called Shot	Once per roll with Shoot, a free Weaken effect: burn one of the target's tags (weapon, cover, mobility) for the scene.
2a	Overwatch	Once per scene, cancel a status of tier 2 or less about to hit an ally by shooting the source. In conflicts, you may Defend with Shoot when covering fire can protect your side.
2b	Trick Shot	Ignore Truths about cover and angles. A free Extra Feat when you shoot objects (cut a rope, hit a switch, ricochet).
3a	One Shot	Once per session, a Shoot Attack against a non-major NPC Takes them Out on a success.
3b	★ Sniper's Patience	Spend a scene setting up (4-segment clock). Your shot gets +2 bonus dice for free and +2 Power on a success.

7. Opens Every Lock

> *Locks, safes, firewalls, sealed doors: they're puzzles, and you love puzzles.*

- Power tags: *nothing stays closed*, *thinks like an architect*
- Weakness tag: *can't resist a challenge*
- PC link: "[PC] keeps me out of trouble, or tries to."

Tier	Ability	Effect
1	Bypass	Each success on a lock, safe, or security clock Advances it +1 extra segment.
2a	Back Door	Once per location, Create the Truth *I know a way in* for 1 Power.
2b	Trap Sense	You always notice traps and alarms before triggering them. Resisting traps costs 0 on a highest die of 5+.
3a	Master Key	Ordinary locks open without a roll. Complex security is two Difficulty steps lower.
3b	★ Vault Breaker	Once per mission, declare a security layer already cracked: fill one security clock completely.

8. Always Has an Escape Plan

> *You never walk into a room without knowing how to leave it.*

- Power tags: *knows every exit*, *slippery*
- Weakness tag: *runs first, thinks later*
- PC link: "[PC] was with me during my worst getaway."

Tier	Ability	Effect
1	Exit Strategy	When you enter a new scene, ask one free Discover question about exits or escape routes.
2a	Clean Getaway	In Chase conflicts where you're fleeing, your side gets +3 Disposition.
2b	Contin-gency	Once per mission, when things go wrong, reveal a prepared fallback (stashed gear, a getaway vehicle, a safe house) as a story tag. No Momentum needed.
3a	Not Here	Once per session, escape any scene with every ally who can follow, before the next status lands.
3b	★ Dead Man's Switch	You can't be held. When captured or Taken Out, you escape at the start of the next scene. The GM gains 2 Woe.

5. Knowledge Focuses

9. Builds Impossible Things

> *An artificer, engineer, or inventor who makes what shouldn't work, work.*

- Power tags: *workshop hands*, *it'll work, trust me*
- Weakness tag: *never quite finished*
- PC link: "I built [PC]'s gear, and I'm still tinkering with it."

Tier	Ability	Effect
1	Jury-Rig	Once per scene, Craft a temporary gadget (a story tag) that lasts the scene and costs 1 Power to Create.
2a	Inventor	During downtime, turn a gadget into a permanent item with a 6-segment clock. It gets 1 power tag and 1 action tag.
2b	Field Repairs	Restore effects work on gear, vehicles, and constructs. Repair damaged armour without downtime.
3a	Master-work	Create one artifact (Module A) with a 12-segment downtime clock. You pay no Refresh to attune your own masterwork.
3b	★ Rig the Field	Once per scene, rig the area with gadgets: Create two story tags for 2 Power total.

10. Heals the Broken

> *Doctor, field medic, herbalist, or combat surgeon.*

- Power tags: *calm hands*, *bedside manner*
- Weakness tag: *can't refuse anyone in pain*
- PC link: "I patched up [PC] when no one else would."

Tier	Ability	Effect
1	Triage	Once per scene, reduce an ally's harmful status by 1 tier without a roll.
2a	Battlefield Surgeon	In conflicts, you may Defend with Medicine when you can reach an ally and provide appropriate treatment. On a successful Defend, restore your side's Disposition normally and clear one tier-1 harmful status from that ally that your treatment can address.
2b	Remedy	In each Players' Turn, clear one Grind condition (Module B) from one ally without spending a Check.
3a	Miracle Worker	Once per session, bring an ally back from a tier-6 physical status. They return at tier 4 and are no longer Taken Out.
3b	★ Physician's Care	Allies you treat during a short rest recover all pool points, not just 1 + Edge.

11. Solves the Unsolvable

> *Detective, investigator, or analyst: you follow the thread to the end.*

- Power tags: *nothing gets past me*, *follows the thread*
- Weakness tag: *obsessed with the case*
- PC link: "[PC] was part of the case that made me."

Tier	Ability	Effect
1	Case File	Start a Mystery clock (6 or 8) for a case. Every Discover you buy also Advances it 1 segment. When it fills, the GM reveals the core truth.
2a	Interro-gator	When questioning someone, each Discover gives two answers.
2b	Recon-struction	At the scene of a past event, ask three Discover questions for free (once per location).
3a	The Reveal	Once per session, name the culprit in front of others. If you're right, your side starts any conflict against them with +4 Disposition, and they get no compromise if they lose.
3b	★ One Step Ahead	Once per session, reveal that you anticipated an opponent's move: cancel one GM Woe spend as it happens.

12. Remembers What Was Forgotten

> *Historian, archaeologist, or keeper of lost lore.*

- Power tags: *walks among ruins*, *reads dead languages*
- Weakness tag: *lives in the past*
- PC link: "[PC] helped me recover something that was lost."

Tier	Ability	Effect
1	Echoes of the Past	At any old or abandoned place, ask one free Discover question about its history.
2a	Lost Knowledge	Once per session, you've read about this before: Create a story tag (*ancient weakness*, *forgotten route*) for 0 Power.
2b	Relic Hunter	When you find cyphers or treasure, roll or draw twice and choose. You identify artifacts automatically.
3a	Living Archive	Lore rolls about history, legends, and old cultures are two Difficulty steps lower.
3b	★ Rewrite History	Prove a Campaign Truth is false with a 12-segment research clock. When it fills, the Truth changes (Module C).

6. Social Focuses

13. Talks Their Way Out of Anything

> *Charm, quick wit, and the right words at the right time.*

- Power tags: *always has a story ready*, *disarming smile*
- Weakness tag: *my mouth writes cheques*
- PC link: "[PC] has bailed me out more than once; I owe them."

Tier	Ability	Effect
1	Fast Talk	Once per scene, use Persuade or Deceive in place of any other skill to get out of a bad situation.

Tier	Ability	Effect
2a	Change of Plans	When a social roll results in a Success at a Cost, you may give the GM 1 Woe instead of accepting the consequence.
2b	Disarming	Once per scene, stop a fight before it starts with a Persuade roll. On a success, the Fight becomes a Negotiation conflict.
3a	★ The Long Con	Start a long con clock (8) against a target. Each success against them Advances it. When it fills, they give up something substantial: land, title, a secret, or their master.
3b	Golden Tongue	Tychē Point invokes on Persuade and Deceive give +3 instead of +2.

14. Wears a Hundred Masks

> *Spy, impostor, or actor: you can be anyone.*

- Power tags: *perfect mimic*, *no one remembers my real face*
- Weakness tag: *who am I really?*
- PC link: "[PC] is the only one who knows my real name."

Tier	Ability	Effect
1	Quick Change	Create a disguise story tag for 1 Power, even without a disguise kit.
2a	Mimic	You can copy voices, mannerisms, and handwriting. Impersonating a specific person gets a free bonus die.
2b	Deep Cover	Keep a cover identity as a permanent story tag with its own contact. The GM must spend 2 Woe to blow your cover.
3a	Belongs Anywhere	Ignore Truths about social barriers (*members only*, *high security*, *closed community*).
3b	★ Become Them	Once per session, take a specific NPC's place for a scene. No one can expose you before the scene ends.

15. Knows Everyone Worth Knowing

> *Fixer, socialite, or broker: you're one call away from anyone.*

- Power tags: *favours owed*, *always on the guest list*
- Weakness tag: *owes favours too*
- PC link: "I introduced [PC] to the people who matter."

Tier	Ability	Effect
1	Contacts	Start with 3 named contacts (story tags). Once per session, call one for a free Discover or a minor favour.
2a	Favour Bank	In each Players' Turn, help a contact (spend a Check) to bank a favour. Spend a favour for substantial help: a safe house, troops, a pardon.
2b	Gossip Network	At the start of each session, ask 2 Discover questions about current rumours. When confirming rumours (Module C), roll twice and choose.
3a	Power Broker	Once per World Turn (Module C), Advance or reverse one faction clock by 1.
3b	★ The Right Person	Once per session, exactly the right contact for the situation happens to be present.

16. Carries the Weight of a Crown

> *Noble, officer, executive, or chieftain: you hold authority, and it holds you.*

- Power tags: *voice of authority*, *my name carries weight*
- Weakness tag: *duty before self*
- PC link: "[PC] serves me, or is the one person who refuses to."

Tier	Ability	Effect
1	Rank	Choose where your authority applies (a realm, company, fleet, or clan). There, Create the Truth *by my order* for 1 Power.
2a	Retainers	Gain loyal servants or aides as a group tag. They give free Help once per scene and handle errands.
2b	Immunity	Once per session, avoid arrest or legal consequences through your status.
3a	Command the Field	In Battle conflicts, your side gets +4 Disposition.
3b	★ Holdings	Gain a holding (keep, office, ship, estate) as a site with 3 Truths you choose. Once per Players' Turn, one action there costs no Check.

7. Wilderness & Travel Focuses

17. Runs With the Pack

> *Beast handler, rider, falconer, or dog-musher.*

- Power tags: *animals trust me*, *calm voice*
- Weakness tag: *better with animals than people*
- PC link: "[PC] is the only person my animals like."

Tier	Ability	Effect
1	Handler	Calm or command ordinary animals with Empathy. If you have an Animal Companion, it gains +1 power tag.

Tier	Ability	Effect
2a	Pack Tactics	Your animals give free Help once per scene.
2b	Beast Lore	Once per scene, Discover a creature's weakness tag without rolling.
3a	★ The Pack	Gain a group of animals (hounds, ravens, horses) with 2 power tags and 1 weakness. It acts as one group and takes statuses as a single target.
3b	Trusted Mount	Gain a superb mount (or upgrade one). In Chase conflicts your side gets +3 Disposition, and the mount carries 3 extra load.

18. Charts the Unknown

> *Explorer, navigator, or surveyor drawn to the blank parts of the map.*

- Power tags: *always knows north*, *mapmaker's eye*
- Weakness tag: *can't resist the horizon*
- PC link: "[PC] backed my first expedition."

Tier	Ability	Effect
1	Carto-grapher	Any area you've travelled becomes a map (story tag). It permanently lowers travel Difficulty there by one step.
2a	Shortcut	Once per journey, skip one leg entirely (no rolls, no Supplies spent).
2b	First Contact	Your first Persuade or Empathy roll with a new people or culture gets a free bonus die.
3a	Discoverer	Once per session, discover a new site (Module C). You define one of its three Truths.
3b	★ Lands Unknown	When the party enters an uncharted region, you name one Region Truth.

19. Lives Off the Land

> *Survivalist, forager, or homesteader: you need nothing the world doesn't give.*

- Power tags: *nothing goes to waste*, *knows what's edible*
- Weakness tag: *distrusts civilization*
- PC link: "I taught [PC] how to survive their first winter."

Tier	Ability	Effect
1	Forager's Eye	The party loses Supplies only every other leg. You clear *Hungry & Thirsty* with an Easy Survival roll.
2a	Shelter Builder	Allies who rest in a camp you built each clear one Grind condition.
2b	Natural Remedies	Use Survival in place of Medicine for Restore effects, using what you gather.
3a	Hardened	Your personal Grind clock is 2 segments larger, and you ignore *Exposed*.
3b	★ Living Larder	The party never runs out of Supplies in any wild terrain that supports life.

20. Was Born Behind the Wheel

> *Driver, pilot, sailor, or rider: you and your vehicle are one.*

- Power tags: *my rig is part of me*, *nerves of steel at speed*
- Weakness tag: *can't leave her behind*
- PC link: "[PC] has ridden shotgun since day one."

Tier	Ability	Effect
1	Signature Vehicle	Gain a vehicle (horse and cart, truck, canoe, starship) with 2 power tags, or give your existing one 2 more.
2a	Stunt Driver	In Chase conflicts, your Maneuvers gain +1 Power.
2b	Grease Monkey	Repair your vehicle in the field with Craft. Restore on vehicle statuses costs 1 Power per 2 tiers.
3a	Ace	Once per scene, reroll a Drive/Pilot roll for free.
3b	★ Legendary Ride	Your vehicle becomes an artifact with one special ability (ram, jump, stealth mode, impossible speed). It costs no attunement Refresh.

8. Weird Focuses ◈

21. Hunts the Things in the Dark ◈

> *Monster-hunter, exorcist, or investigator of the strange.*

- Power tags: *knows their weaknesses*, *silver, salt, and iron*
- Weakness tag: *the dark hunts me back*
- PC link: "[PC] saw what I saw that night, and they're the only one who believes me."

Tier	Ability	Effect
1	Monster Lore	Once per scene, Discover a supernatural creature's weakness tag without rolling.
2a	Bane	Your Attacks against a creature whose weakness you've exploited inflict +1 tier.
2b	Ward the Threshold	Spend a scene preparing a location. For one night, supernatural creatures must beat Formidable 21 to cross it.
3a	Unshake-able	When you Resist fear, possession, or corruption with Pneuma, the cost is 0 on a highest die of 5+, and you reduce the status by 3 tiers.
3b	★ Nemesis	Name a supernatural foe. You always sense its direction, and your rolls against it get a free bonus die.

22. Walks Between Worlds ◈

> *Touched by the spirit world, the Otherworld, or the deep net.*

- Power tags: *one foot across the veil*, *spirits whisper to me*
- Weakness tag: *not quite of this world*
- PC link: "[PC] anchors me. Without them, I'd drift away."

Tier	Ability	Effect
1	Spirit Sight	You can see and speak with spirits, ghosts, or digital entities. Once per scene, a Discover about them costs 0 Power.
2a	Crossing	With a 4-segment ritual clock, step into the other world and back, bringing up to two allies.
2b	Ghostly Ally	A minor spirit follows you. Once per scene, it gives a free Discover about places it can reach.
3a	Ally Beyond	Gain a powerful patron in the other world. Once per session, call on it for a Heroic-scope favour; the GM gets a compel on your weakness tag in return.
3b	★ Half-Step	Once per scene, become intangible until your next action. Ignore one incoming physical status.

23. Made a Bargain With Something Old ◈

> *Warlock, cursed heir, or desperate deal-maker. You have power, and a debt.*

- Power tags: *patron's gift*, *knows the old names*
- Weakness tag: *the debt comes due*
- PC link: "[PC] knows what I traded, and hasn't told anyone."

Tier	Ability	Effect
1	Patron's Gift	Gain a minor Domain (Generic Playbooks §8.1) tied to your patron. You can perform Easy and Standard workings with Arcana, paying Pneuma. If you're already an Adept, your Domain gets +1 power tag instead.
2a	Ask the Patron	Once per session, ask two Discover questions. The GM gains 1 Woe.
2b	Not Yet	Once per session, when you'd be Taken Out, your patron intervenes: you stay at tier 5. The GM gets a free compel on *the debt comes due* next session.
3a	Greater Gift	Your patron Domain works up to Formidable 21.
3b	★ Borrowed Might	Once per session, call on your patron's power directly: gain 4 Power to spend on any Effects without a roll. The GM gains 3 Woe.

24. Is More Than Human ◈

> *Mutant, cyborg, half-fae, or carrier of a strange bloodline.*

- Power tags: *[your trait]*, *unnatural resilience*
- Weakness tag: *outsider*
- PC link: "[PC] saw me change and stayed anyway."

Tier	Ability	Effect
1	Gift	Choose a trait (claws, enhanced senses, night vision, gills, wings, cyber-arm). Its tag may add +1 above the normal +2 cap (maximum +3) on related rolls. Gain +2 to one pool.
2a	Second Trait	Choose another trait. It also may add +1 above the normal cap (maximum +3).
2b	Regeneration	A short rest clears one tier-1 physical status. A full rest clears 2 tiers from every physical status.
3a	Apex Form	Once per scene, unleash your nature: a free bonus die on Sōma and Mētis skills for the scene. At scene end, take *Weary*.
3b	★ Beyond Limits	Gain +1 Edge in two pools (max 3 each).

9. Design Notes

9.1 Coverage by Playbook

Playbook	Strong fits
Bellator	1, 2, 3, 4, 6, 16, 17, 19, 21
Furcifer	1, 3, 4, 5, 6, 7, 8, 11, 13, 14, 20
Savant	7, 9, 10, 11, 12, 15, 18, 21, 22
Interlocutor	2, 8, 10, 11, 13, 14, 15, 16
Explorator	1, 2, 3, 5, 6, 9, 12, 17, 18, 19, 20
Adept	7, 9, 10, 12, 21, 22, 23
Any	23, 24

Off-type combinations are encouraged: an *Interlocutor who Masters a Weapon* is a duellist-diplomat; an *Adept who Was Born Behind the Wheel* is a witch with a haunted truck.

9.2 Things to Watch in Playtest

- Tag-cap exceptions (Masters a Weapon, Is More Than Human): resolved (v0.3) — both abilities now add +1 above the normal +2 cap (maximum +3 from tags) instead of ignoring the cap outright. Re-test rolls at Formidable/Heroic Difficulty after this change to confirm it still feels earned rather than trivial.
- Once-per-session "auto-wins" (One Shot, The Reveal, Not Here, Become Them, The Right Person): these are deliberate spotlight moments. If several players have them, the GM may limit the table to one per scene.
- Overlap with playbook abilities: a few Focus abilities echo playbook abilities (Beast Lore / Monster Lore, Trap Sense / Escape Artist). That's intended for off-type characters; for on-type characters, the two don't stack. Take the better one.
- ★ distribution: every Focus has exactly one ★ option, and it's never the Tier 1 ability, so you can always reach Tier 3 at full Refresh.
- Gaps for v0.3: a dedicated faith/priest Focus (non-Weird reading: "Keeps the Faith"), a scholar-of-war Focus, a merchant/trader Focus, and a performer/artist Focus.

12

APPENDIX

Quick Reference

The core procedures on one spread, for the table and the screen. Full rules are in Chapter II.

IN THIS CHAPTER

The Roll 83
Difficulty 83
Outcomes 83
Doubles (Twists) 83
Bonus Dice 83
Create (Core Rules §5) 83
Resist (Core Rules §6) 83
Running Dry (Core Rules §6.1–6.3) 83
Conflict Setup (Core Rules §10.2–10.3) 84
Damage Cycle (Core Rules §6, §10) 84
Area Effects (Core Rules §10.16; provisional) 84
Interpose (Core Rules §10.17) 84
Rest and Recovery 84
The Four Currencies 85

The Roll

2d12 + Skill + Modifiers vs. Difficulty. Skill +0 to +4. Power tags +1 each, maximum +2 per roll (tag-cap exceptions: maximum +3). Weakness tags −1 each, no cap. Statuses ± tier. Truths shift Difficulty, not the roll: one step per rank (max rank 2), ±3 steps at most (Core Rules §2.1, §8).

Difficulty

Difficulty	Target
Trivial	No roll
Routine	9
Easy	12
Standard	15
Hard	18
Formidable	21
Heroic	24
Epic	27
Divine	30

Each step is 3 points; no minimum target. A target below Routine 9 does not automatically become Trivial (Core Rules §2.2).

Outcomes

Result	Outcome
Meet the target	Success: 1 Power, +1 per full 3 over
Miss by 1–3	Success at a Cost: 1 Power, and the GM adds a consequence or gains 1 Woe (player's choice)
Miss by 4+	Failure: the GM makes a move and gains 1 Woe

Unspent Power becomes Momentum (party pool, max 6). ,

Doubles (Twists)

If the two kept dice match: on a success, a Critical (+1 Power and a flourish). On a failure or cost, a Complication. Double 12s always succeed with +2 Power. Double 1s always bring a complication. Buy off a complication from the dice by giving the GM 2 Woe; the GM spends 2 Woe to cancel an NPC's. Risky 1–3 (optional): roll a Risk die; at or under the rating, a complication.

Bonus Dice

Keep the best two dice; maximum +2 bonus dice.

Source	Cost
Effort	3 – Edge from the pool (min 0); or buy +1 Power after a success
Momentum	1 for the first die, 2 for the second
Woe	Give the GM 1 Woe per die
Help	An ally spends 1 pool point and shares the risk

Create (Core Rules §5)

2 Power per Truth rank, in or out of conflict: rank 1 costs 2; rank 2 costs 4. Each explicit ability/item discount is −1 Power, minimum 1. Floor Collapse costs 4 Power (Core Rules §10.6).

Resist (Core Rules §6)

Roll 2 + Edge d12, take the highest die, and pay the listed cost (don't subtract Edge): two or more 12s cost 0 and clear a tier-1 status · 9–12 costs 1 · 5–8 costs 2 · 1–4 costs 3. This reduces the status by 2 tiers. Negative Edge: −1 rolls 1d12; −2 or lower rolls that many dice (2d12 at −2, 3d12 at −3) and keeps the lowest.

Running Dry (Core Rules §6.1–6.3)

A cost that empties a pool, or is more than what's left in it, imposes a running-dry status at tier 1 + overrun (overrun = cost − points left). Only Resistance and imposed costs can overrun; a cost of 0 never runs dry. The status stacks normally. At tier 6 you are Taken Out within its scope and gain one Scar (at most one per event). The pool and the status recover separately: 2 recovery points remove 1 depletion tier.

Conflict Setup (Core Rules §10.2–10.3)

Roll 2d12 + Disposition skill + highest Edge in its pool; divide by 3, round down, then add +1 per helper and all flat modifiers at full value. No flat-modifier stacking cap; minimum 1 before Superiority (0–3). Superiority alone can reduce starting Disposition to 0: hand-wave the conflict as a win at no cost (Core Rules §10.12, none or trivial). PC/opposition symmetry and opposition eligibility remain playtest flags.

Damage Cycle (Core Rules §6, §10)

Each side has one shared Disposition total, with no per-member shares or spill-over. Attacks and Feints remove their committed Power + 1 and nothing else, and Defend restores it up to its starting value. A side loses at 0 or when no participant can continue. Injury trade: one per Attack or Feint, once per conflict, accept a tier 2/3/4 injury to cancel 1/2/3 loss; it can't be Resisted. Treatment removes at most 1 tier of a lasting injury until healing time does. Tier-6 life-threatening harm makes you Dying: 3-segment clock, Medicine vs. Hard 18 to stabilise. Compromise statuses are tier 2/3/4.

Area Effects (Core Rules §10.16; provisional)

Establish the area and everyone it can reach; allies are not automatically excluded. An area Attack or Feint removes normal shared Disposition loss once, plus 1 per additional opposing participant affected. Explicit statuses apply at full tier to everyone affected, with separate Resistance or NPC reduction. Area alone adds no status to an ordinary conflict Attack; apply both layers only if a rule grants both. One eligible injury trade at most against the combined loss of that Attack or Feint. No Disposition outside conflicts.

Interpose (Core Rules §10.17)

Bulwark: once per exchange, redirect an ally's entire imposed status before their Resistance or reduction; use your own normal Resistance or NPC reduction, with at most one NPC reduction per status. Outside conflicts, no separate frequency limit. Must be able to intercept; cannot redirect shared Disposition loss, injury payments, running-dry statuses, agreed concession costs or compromise costs. Cannot shield an ally from an area effect already affecting both of you.

Rest and Recovery

Rest	Time	Recovery
First	A few seconds; 1 action mid-encounter	½ d12, round up
Second	10 minutes	½ d12, round up, +1
Third	1 hour	½ d12, round up, +2
Fourth	10 hours (overnight)	All pools full

Divide the points among Sōma, Mētis, Psychē and Pneuma, up to each pool's maximum. Edge does not apply. Hardened (one-time Advance): +1 point on every recovery roll.

The Four Currencies

Resource	Owner	Job
Pools (Sōma, Mētis, Psychē, Pneuma)	Each PC	Effort and Resistance
Tychē Points	Each PC	Invoke tags, accept compels
Momentum	The party	Surplus Power from strong rolls (max 6)
Woe	The GM	Complications and escalation
